RELIGIOUS ORGANIZATIONS. According to the 1941 *Yearbook of American Churches*, published under the auspices of the Federal Council of the Churches of Christ in America, 64,501,594 of the 131,669,275 persons in the United States (1940 census) belong to one or another of the 250 existing religious denominations. This represents an increase of 7.86 per cent in church membership during the past decade as compared with a 7.2 per cent increase in population. Of the total church members, 31,722,647 belonged to the larger Protestant bodies (having 50,000 or more members), 15,252,639 to the Roman Catholic Church, and 3,341,652 to the Jewish Congregations.

The table on page 568, reprinted from the publication cited above, lists in alphabetical order the religious bodies in the United States having 50,000 or more members. The 52 churches in this list comprise more than 97 per cent of the church membership in the nation, the remaining 3 per cent being found in 198 bodies. For more complete statistics on the larger churches, see the separate articles in this volume supplied by the officials of each. See also CATHOLIC WELFARE CONFERENCE; FEDERAL COUNCIL OF CHURCHES OF CHRIST; JEWISH WELFARE BOARD; and SOCIETIES AND ASSOCIATIONS under *Christian Endeavor, Sunday-School Union*, et cetera.

RETAIL TRADE AND PRICES. See BUSINESS REVIEW; CONSUMERS' COOPERATIVES; MARKETING.

RÉUNION. A French colony, 420 miles east of Madagascar. Area, 970 square miles; population

(1938), 210,000. Chief towns: St. Denis (capital), 30,762 inhabitants (1936); St. Paul, 21,485; St. Louis, 19,195; St. Pierre, 17,924; Pointe-des-Galets, the principal port. Education (1938): 243 schools and 27,500 pupils. Chief products—sugar, rum, manioc, coffee, vanilla, and spices. Trade (1938): 263,900,000 francs for imports and 206,400,000 for exports (franc averaged \$0.0288 for 1938). Since the fall of the French Republic the government of Réunion has been under the control of the French government at Vichy, France. Governor, M. Truitart.

RHEOTRON. See PHYSICS.

RHODE ISLAND. A New England State. Area: 1,214 sq. mi., including 156 sq. mi. of inland water, but excluding Atlantic coastal waters, 14 sq. mi. Popu-

lation: (1940 census) 713,346. The urban population comprises 91.6 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 1.6 per cent (U.S. average, 10.2); elderly (65 years and over), 7.6 per cent. Rhode Island ranks 48th among the States in area, 36th in population, and first in density, with an average of 674.2 persons per square mile. The largest city and capital is Providence with 253,504 inhabitants. There are five counties and 15 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to James F. Rockett, Director of the Department of Education, there were 110,404 pupils enrolled in the public day schools of Rhode Island during the school year 1940-41, 62,856 in elementary schools and 47,548 in secondary (including vocational) schools. Teachers numbered 4,212 and received an annual average salary of \$1,730.28. Total current expenditures for the year were \$10,925,237.54; capital outlay, \$1,112,836 (excluding \$65,400 for evening schools).

Transportation. State highway mileage in 1939, including streets under State control, totaled 836, of which all was surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 189,717; 166,341 were private and commercial automobiles, 451 busses, and 20,717 trucks and tractor trucks. Gross motor-fuel consumption was 133,963,000 gallons. Net motor-fuel tax receipts were \$3,945,000, the rate being three cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,218,000.

Railways of all classes extended 194 miles (Dec. 31, 1939) .08 per cent of the total mileage in the United States. Class I steam railways accounted for 118 miles. There are four airports and landing fields in the State (one lighted field) and four seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 164 civil aircraft in the State and 321 airline transport, commercial, and private pilots (276 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 47,600, as compared with 46,700 acres in 1940. According to the latest census, there are 3,014 farms, valued at \$26,334,374, averaging 73.6 acres each. Farm population numbered 16,241 or 2.3 per cent of the total.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$516,390,541. For details, see 1940 YEAR BOOK.

Mineral Production. The value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$980,916 or only .02 per cent of the total for the United States.

Trade. According to the 1940 census there were 762 wholesale establishments in Rhode Island, employing 7,430 persons, reporting net sales for 1939 of \$239,013,000 and annual pay roll of \$12,435,000. There were 10,485 retail stores with 30,149 employees, reporting sales of \$274,759,000 and pay roll of \$30,890,000. Service establishments numbered 3,938, employing 6,123 persons for \$6,098,000 per year, and reporting a business volume amounting to \$21,243,000. The leading business center of the State is Providence which reported wholesale sales of \$183,714,000, retail sales of \$131,159,000, and \$13,539,000 receipts for its service establishments.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons

in Rhode Island was \$16,610,000. Under the Social Security program, financed by Federal funds matching State grants, 6,976 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$20.40 (U.S. average pension, \$21.08); 3,730 dependent children in 1,305 families received average monthly payments of \$45.50 per family (U.S. average, \$32.73); and 84 blind persons received \$19.96 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 3,220 and received \$30.46 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 258 (\$17,000); NYA student work program, 1,765 (\$14,000); NYA out-of-school work program, 1,781 (\$38,000); WPA, 6,038 (\$381,000); other Federal emergency projects, 45 (\$4,000); regular Federal construction projects, 20,147 (\$3,243,000).

Legislation. The General Assembly convenes in regular session on the first Tuesday of January annually. It is composed of 44 Senators (25 Republicans and 19 Democrats in 1941) and 100 Representatives (41 Republicans and 59 Democrats). The following is a list of the more important measures passed at the January, 1941, session of the Legislature, as compiled for the YEAR BOOK by Mabel G. Johnson, Legislative Reference Deputy of Rhode Island.

Act creating a State Council of Defense and authorizing local and district councils

Amended Civil Service law, giving the Governor power to name a new commission, exempting 10-year employees from examinations, providing that 5-year employees retain their positions with only qualifying examinations, and substituting for the previous law requiring the appointment of the top eligible person, the choice of any one of the top three

Old Age Assistance monthly payments increased to \$40 a month maximum from \$30

Special Commission created to study tax and financial problems of the State and municipalities

Creation of a four-member bi-partisan State Board of Elections

A new Arrest Law

Act providing for the licensing of sale and manufacture of explosives

Act setting up a standard of 35 per cent butter fat on Grade A milk, a maximum bacteria count of 50,000 based on average of four counts, a 200,000 bacteria count on cream, and a 200,000 bacteria count on Grade B milk

Act giving Housing Authorities the right of eminent domain

Act providing for extension of the Food Stamp Plan throughout the State, under State administration, and taking in "low income groups" as well as relief recipients

Act banning the taking of striped bass less than 16 inches in length from the waters of the State or from the ocean within three miles of the shore

Act relating to the eradication of star fish by providing for a bounty upon such fish

Act providing that the State of Rhode Island may enter into an Atlantic States Marine Fisheries Compact.

Act creating the office of Public Defender.

Commission to investigate the employment problems of the Negro

Uniform Veterans' Guardianship Act.

Act eliminating 30 per cent food revenue requirement for Class B liquor establishments and the requirement that they be staffed and equipped to feed 25 persons at a time

Legalizing class A liquor licenses without reference to population ratios and allowing the State to fix retail prices, except for malt beverages.

A Rhode Island State Labor Relations Act establishing a Labor Relations Board (Baby-Wagner so-called).

Several amendments to Workmen's Compensation Law (see LABOR LEGISLATION)

Act relating to State wage payment and wage collection

Act authorizing and directing the director of public works to cooperate with the Federal Government in a highway program affecting national defense.

Act guaranteeing to persons entering armed forces maximum unemployment compensation of \$16 weekly upon their discharge, as long as they are unemployed or as long as their wage credits last.

Act providing that draftees shall be restored to governmental positions when training period is satisfactorily completed. See LABOR CONDITIONS under *Collective Bargaining*; LABOR LEGISLATION.

Finances. Total tax collections in Rhode Island for the fiscal year ending in June, 1940, were \$26,571,000. Total sales taxes amounted to \$5,249,000, including motor fuel, \$3,847,000. Taxes on specific businesses ran to \$6,842,000, unemployment compensation, \$9,782,000 (1941: \$10,767,000).

Cost payments for the operation of general government totaled \$20,786,000 in 1939, the latest year available. (Revenues for the general government for that year were \$26,253,000.) Cost of operation per capita was \$29.53. Total gross debt outstanding in 1941 was \$30,766,000, as compared with \$21,930,000 in 1932.

Officers and Judiciary. The Governor is J. Howard McGrath (Dem.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Louis W. Cappelli; Secretary of State, Armand H. Cote; Attorney General, John H. Nolan; State Treasurer, Russell H. Handy; State Budget Director and Comptroller, Christopher Del Sesto. Chief Justice of the Rhode Island Supreme Court is Edmund W. Flynn; there are four associate members.

RHODES. See ITALIAN AEGEAN ISLANDS.

RHODESIA, Northern. A British protectorate in South Africa. Area, 290,320 square miles. Population (1938), 1,379,962, including 1,366,425 Africans, 13,000 Europeans, and 537 Asiatics. Chief towns: Lusaka (capital), Livingston, Broken Hill, Fort Jameson, Mazabuka.

Production and Trade. Maize, wheat, tobacco, coffee, oilseeds, citrus fruits, and teakwood are the main agricultural products. Mineral output (1939) included copper (215,065 met. tons), cobalt alloy (1,556 met. tons), silver (80,137 fine oz.), gold (4,645 fine oz.), vanadium (384 met. tons). Trade (1939): £4,521,082 for imports and £10,220,182 for exports including reexports (copper £8,904,112, cobalt £67,317, zinc £188,448, vanadium £286,644, tobacco £97,341, and wood products £109,402 were the main export items). Roads (1940): 8,175 miles.

Government. The budget estimates for 1940 indicated revenue of £1,864,686 and expenditure of £1,608,203. A governor, assisted by an executive council, administers the protectorate. There is a legislative council of 17 members (the governor as president, 5 ex-officio, 4 nominated official, and 7 elected unofficial). Governor and Commander-in-Chief, Sir John Waddington (appointed June, 1941).

History. It was announced in the British House of Commons on Dec. 11, 1940, that the government had decided (within war limits of man power and materials) to proceed in 1941 with the full program of the Five-Year Plan which included the construction of African housing (£31,000), African schools in the Copperbelt (£14,000), African hospitals and dispensaries (£10,000), and loans to local authorities, mainly for African housing (£50,000).

In a summary of the recommendations of the Commission appointed to inquire into the disturbances of 1940 in the Copperbelt of Northern Rhodesia and the local government's decisions concerning them it was stated that the African mine-workers were to receive a general increase in initial rates of pay and a revision of wage rates, bonuses, and cost-of-living allowances. There were to be advances in regard to the method of collective bargaining, the handling of labor questions, and in the

provision for education, recreation, and general welfare. The full report made public later revealed that part of the moral responsibility for the rioting was caused by those Europeans at Mufulira and Mkana belonging to the Northern Rhodesia Mine Workers' Union who broke their agreement and went on strike.

It was announced in March that a war tax of £1 per head would be paid by every white person in the territory, and the total amount received given to the British government for war purposes. Thirty-five of the 39 German missionaries in Northern Rhodesia were confined to their mission stations, and the other 4 were subject to supervision in their movements. The Import Control Measure which went into force on May 3, 1941, prohibited the importation of goods unless admission was authorized by open general import license or a special import license has been issued by the comptroller of the currency.

Munitions made in the machine shops of the Copperbelt mines were accepted by the Southern Rhodesia War Supplies Board and found to be of 100 per cent quality. An arbitration award set a price of £153,985 to be paid by the government to the North Charterland Exploration Co. for 3,776,741 acres of land in northeastern Rhodesia. See RHODESIA, SOUTHERN and TANGANYIKA under *History*.

RHODESIA, Southern. A British self-governing colony in South Africa. Area, 150,333 square miles. Population (June 30, 1940, estimate), 1,435,560, including 1,367,000 natives, 62,330 Europeans, and 5,960 Asiatics and colored. Chief towns: Salisbury (capital), 32,846 inhabitants in 1936; Bulawayo, 29,126; Umtali, Gwelo, Gatooma, Que Que, Eiffel Flats, Shabani, Fort Victoria. Education (1939): 124,000 students in schools of all kinds.

Production and Trade. Maize, wheat, cotton, tobacco, groundnuts, and fruits are the chief agricultural products. Livestock (1939): 2,326,038 cattle, 302,391 sheep, and 132,074 swine. Dairy products (1939): 1,798,456 gal of milk, 861,516 dozen eggs, 1,449,007 lb. of butter, and 355,844 lb. of cheese. During 1940 there were produced 826,485 fine oz. of gold and 186,080 fine oz. of silver. Other metals (with 1939 production figures) were chrome ore (139,083 met. tons), asbestos (52,900 met. tons), tin (451 long tons, metal content), tungsten (270 met. tons), nickel (490 met. tons). Trade (1940): £7,716,000 for imports and £13,404,000 for exports.

Communications. In 1940 there were 1,361 route miles of railway and 1,588 route miles of supplementary road motor service in operation; 12,557 miles of roads; and 2,769 route miles of airways linking the important towns and including a service to Beira, Mozambique.

Government. Budget (1941-42): £6,242,102 for revenue and £8,852,749 for expenditure. Revised budget (1940-41): £5,570,554 for revenue and £9,276,954 for expenditure. On Mar. 31, 1941, the total public debt was £17,055,841. The government is administered by a governor, assisted by an executive council. There is a legislative assembly of 30 members elected for a five-year term by British subjects over 21 years of age, subject to certain qualifications (23 Unionists and 7 Laborites were elected on Apr. 14, 1939). In October of 1937 a law (authorized by the constitution) was passed providing for the establishment of native councils in native reserves, representative of the local chiefs and native residents, to advise the governor and manage certain local affairs. Governor and Com-

mander-in-Chief, Sir H. J. Stanley (appointed in 1934; term extended to Jan. 7, 1942); Premier, Sir Godfrey Huggins (Unionist).

History. On Feb. 19, 1941, it was announced that a contingent of pilot officers who had completed their training in Southern Rhodesia had arrived in Great Britain and were the vanguard of a stream of men who will form the Rhodesian squadrons of the R.A.F. A meeting of representative officials met at Salisbury on Oct. 18, 1941, to discuss arrangements for the agenda of the conference on amalgamation between the two Rhodesias and Nyasaland to be held early in 1942. The subjects for consideration included the constitution of the joint territory and parliamentary machinery, native representation, means of decentralizing government, and finance. See NYASALAND and TANGANYIKA under *History*.

RICE. The rice crop in the United States in 1941 was estimated by the U.S. Department of Agriculture to total 54,028,000 bushels from 1,245,000 acres versus 54,433,000 bushels in 1940 from 1,069,000 acres, and compared with the 1930-39 average of 45,673,000 bushels and 942,000 acres. Early season prospects for a record crop were upset by a Gulf hurricane in September, and unfavorable conditions in California. Acre yields averaged 43.4 bushels in 1941, 50.9 bushels in 1940, and 48.4 bushels over the 10-year period. Yields in producing States were for Louisiana 19,906,000 bushels, Texas 13,600,000, Arkansas 11,342,000, and California 9,180,000 bushels. The season average price per bushel (preliminary) received by farmers was 118.5¢ and the value of production was estimated at \$63,997,000 compared to 81.2¢ and \$44,208,000 in 1940.

The 1941-42 crop of rough rice in other countries was estimated for China 2,327,000,000 bushels, Japan 541,000,000, Chosen 216,000,000, Taiwan 83,000,000, Manchuria 40,000,000, Spain 13,669,000, Peru 6,190,000, and Mexico 5,405,000 bushels. The 1940-41 crop of Burma was 401,625,000 bushels, Argentina 2,743,000, and Uruguay 1,086,000 bushels.

ROADS AND STREETS. During the year ending June 30, 1941, a total of 11,724 miles of Federal-State highways was improved. Eliminations of railway-highway grade crossings in 1940-41 totaled 321, besides which 65 obsolete grade crossing structures were rebuilt and protective devices installed at 941 crossings. Most of the highway improvements consisted of widening and strengthening road surfaces, reducing curves and grades. Of the roadways improved, a total of 2,244 miles were merely graded and drained; 1,073 miles were sand-clay surfaced, of which about three-fourths were treated to give increased stability; 3,815 miles were gravelled, of which a little over half were treated; 370 miles were macadamized, most of which was treated; 2,401 miles were surfaced with bituminous mix, macadam or concrete; 1,741 miles with Portland cement concrete; 9.4 miles with block; and 56 miles were made up of bridges and their approaches. Grade separation totaled 10 miles. The highest total mileage of highway improved in any one State was 858 in Iowa. Next came 805 in Texas and 725 in Minnesota. In Hawaii and Puerto Rico

the mileage was 15 and 29. The entire cost of the work outlined was \$283,880,000, of which \$155,909,000 was met from Federal funds. The States matched outlays for main and secondary highways.

Improvement of a route from Chicago to Springfield, Ill., 204 miles long, was completed late in the year. Tentative plans for a superhighway from Boston to Washington, 405 miles, were carried forward. Twelve traffic lanes have been proposed through regions of the densest traffic. (*Engineering News-Record*, Apr. 10, 1941.) Plans for a 60-mile belt-line defense highway around Indianapolis, were approved late in the year by the Indiana State Highway Commission. The plan had been endorsed by the Indianapolis office of the PRA.

Up to September, toll superhighways had been authorized by the legislatures of Maine, New York, Maryland, Florida, and Illinois. Similar legislation had been defeated in New Jersey, Wisconsin, Missouri, and Oklahoma.

Mexico allotted \$23,000,000 for highway construction in 1942. Of this amount it was expected that \$10,000,000 would be provided by the Export-Import Bank of Washington, D.C. Preference will be given to completion of the part of the Pan American highway running to the border of Guatemala. A 24½-mile highway through the tropical jungles of Panama, connecting Colon with the present highway from Panama City to the Madden Dam, is being constructed by the United States to improve the defense facilities of the Panama Canal. (*Engineering News-Record*, July 17, 1941; New York.) In Paraguay, American engineers and contractors, using American equipment, are building the first modern highway in that country. It will be a major link in a highway across Paraguay to Brazil. Surveys were begun in December, 1940. A loan from the Export-Import Bank, Washington, D.C., is expected. (Durham, "Road Construction in Paraguay," *Engineering News-Record*, June 5, 1941; New York.)

The accompanying table shows latest statistics for highways and motor vehicle registrations in the Western Hemisphere. Statistics by States will be found in the articles on the States under *Transportation*; for the rest of the world, see YEAR BOOK for 1940. See BRIDGES; ILLUMINATION; MOTOR VEHICLES; RAPID TRANSIT; TRANSPORTATION DIVISION; TUNNELS; articles on countries and States under *Transportation*.

M. N. BAKER.

ROCKEFELLER FOUNDATION, The. An organization chartered in 1913 for the permanent purpose of "promoting the well-being of mankind throughout the world." The present program is concerned with certain definite problems in the medical, natural, and social sciences, the humanities, and public health. For work in these fields the Foundation appropriated in 1941 approximately \$9,000,000. A statement of representative grants follows.

Medical Sciences. The purposes for which funds were provided in the field of the medical sciences in 1941 include the teaching of public health and preventive medicine in medical schools, development of tropical medicine, and teaching and research in psychiatry, neurology, endocrinology, and cancer and allied diseases. Among the appropriations for such work were: \$600,000 to Cornell University Medical College for endowment of the Department of Public Health and Preventive Medicine; \$200,000 to Tulane University for the development of the Department of Tropical Medicine; \$168,000 to the National Research Council for the support of the Welch Fellowships in internal medicine; \$150,000 to the National Research Council toward the support of the work of the Committee for Research in Problems of Sex; \$150,000 to Washington University, St. Louis, for the support of a Department of Neuropsychiatry, \$150,000 to the University of Chicago for teaching and research in psychiatry; \$120,000 to the Memorial Hospital for the Treatment of Cancer and Allied Diseases for the support of research, teaching, and professional care, \$80,000 to Dartmouth College for research in physiological optics; \$25,000 to McGill University for research in endocrinology; and \$20,700 to the University of Edinburgh for research in psychiatry, neurology, and neurosurgery.

Natural Sciences. The program in the natural sciences was concerned almost entirely with experimental biology. Among the appropriations in this field in 1941 were \$76,000 to the University of Rochester for cooperative research in the Medical School and the natural science departments of the College, using radioactive and stable isotopes for investigation of biological and medical problems; \$52,000 to the University of Minnesota for research with radioactive and heavy isotopes as tracers of fundamental biological processes; \$75,000 to Cornell University for research in the Department of Biochemistry; \$70,000 to the Massachusetts Institute of Technology for the development of an electron microscope in the Division of Biological Engineering as an instrument for research in the biological and the medical sciences; \$65,000 to Stanford University for the development of an electron microscope; \$60,000 to Cornell University for research in nutrition as related to aging and longevity; \$48,500 to the Johns Hopkins University for research in nutrition, \$30,000 being for use in the School of Medicine, and \$18,500 in the School of Hygiene and Public Health; \$40,000 to the California Institute of Technology for research in chemistry in its relation to biological problems, \$34,520 to the University of Texas for research in genetics of *drosophila*; and \$280,000 to the National Research Council for its administrative budget and for the support of conferences, committees, special studies, and fellowships.

Social Sciences. In the social sciences the emphasis was on projects contributing not only to the understanding of important social problems but also to the development of personnel and methods. Appropriations in 1941 included \$200,000 to the Social Science Research Council for conferences and planning, grants in aid, and fellowships; \$150,000

to the University of Chicago for research in the Division of Social Sciences; \$103,700 to the Council on Foreign Relations for support of study groups and research in problems involved in the peace settlement which will follow the present war; \$70,000 to the National Bureau of Economic Research for its program of financial research; \$51,500 to Yale University for research in the Institute of International Studies; \$50,450 to the University of Minnesota for study of employment and unemployment; \$50,000 as a special grant in aid fund in the social sciences to be allocated to institutions and individuals for studies in Latin American countries; \$35,000 to the University of Minnesota for analysis of family and individual income in Minnesota; \$30,000 to the Massachusetts Institute of Technology for research in the Industrial Relations Section, \$20,000 to Dalhousie University for training and research in public administration.

Humanities. The program in the humanities was concerned with the means, such as museums, motion pictures, radio, drama, and libraries, by which cultural levels of contemporary society are being influenced, and with the promotion of better international understanding through cultural interchanges. In 1941 the American Council of Learned Societies received the following grants: \$170,000 for microfilming scholarly materials, \$100,000 for planning and development, fellowships, and the work of its Committee on Far Eastern Studies, \$50,000 for the development of personnel and resources for teaching living oriental languages, \$50,000 for the expenses of special intensive instruction in Chinese, Japanese, and Russian languages, and \$25,000 for a summer institute for intensive study of Spanish and Portuguese languages, a grant of \$60,000 went to Columbia University for its Office of Radio Research, \$28,800 to the Library of Congress for studies of communication trends in wartime; \$20,000 to the Museum of Modern Art for the study of films in wartime communication, \$15,960 to the New School for Social Research for the study of totalitarian communication in wartime; \$15,000 to the University of Michigan for teaching English to advanced students of Spanish American background; \$12,500 to the Buffalo Museum of Science for advisory service and training of personnel in national museums of South and Central America; and \$10,000 to the Library of Congress for assistance to South and Central American libraries.

Public Health. The Foundation appropriated \$2,000,000 for the work of its International Health Division in 1941. This work included research on a number of selected diseases, among them, yellow fever, malaria, tuberculosis, influenza, the common cold, rabies, syphilis, and diphtheria; demonstrations in the control of certain of these diseases in their environments; cooperation with governments in the organization or improvement of important services of central or local health departments; and the development of public health education. In addition a grant of \$75,000 was made to the National Health Council for a study of private health agencies, and \$250,000 was appropriated for the use of the International Health Division in supporting the activities of The Rockefeller Foundation Health Commission in European and other countries severely affected by war conditions.

Officers. The executive officers of the Foundation in 1941 were Walter W. Stewart, chairman of the board of trustees; Raymond B. Fosdick, president; Thomas B. Appleget and Selskar M. Gunn, vice-presidents; Alan Gregg, M.D., director for the medical sciences; Warren Weaver, director for the

natural sciences; Joseph H. Willits, director for the social sciences; David H. Stevens, director for the humanities; Wilbur A. Sawyer, M.D., director of the International Health Division; Norma S. Thompson, secretary; Edward Robinson, treasurer; George J. Beal, comptroller; Thomas M. Debevoise, counsel; and Chauncey Belknap, associate counsel. The offices of the Foundation are at 49 West 49th Street, New York.

ROCKY MOUNTAIN FEVER. See PUBLIC HEALTH SERVICE.

RODENT CONTROL. See CIVILIAN CONSERVATION CORPS; FISH AND WILDLIFE SERVICE.

ROMAN CATHOLIC CHURCH. With war reaching the United States, the Catholic Church accelerated and made available its facilities and influence for the welfare of the American people at large. The International Catholic Office for Refugee Affairs was merged with the Catholic Committee for Refugees. The Bishops contributed \$50,000 to the Commission for Polish Relief. The American Catholic Committee for British Catholic Relief donated \$10,556

A September War Department tabulation estimated that 31 per cent of the Army personnel was Catholic. August figures revealed 362 Catholic Army chaplains were actively on duty. The National Catholic Community Service, one of the six USO organizations, by the end of the year was operating 80 clubs for service men and 15 centers for women in defense work conducted by the Women's Division. There were 194 staff workers in the field.

The *Official Catholic Directory* for 1941 gave 22,293,101 as the total Catholic population of the United States, Alaska, and the Hawaiian Islands, an increase of 889,965 over the previous year. There were 35,839 priests, diocesan and regular, 152,159 professed Sisters, and 7,762 professed Brothers. A new Ecclesiastical Province was established—Denver—and two new dioceses created—Honolulu and Pueblo. The changes brought the total of Ecclesiastical Provinces in the United States to 20. Two Bishops were made Archbishops and seven priests elevated to the Episcopate. Two members of the Episcopate died—Bishop Theodore Reverman, Fourth Ordinary of Superior, and the Most Rev. Vincent Wehrle, O.S.B., retired Bishop of Bismarck. Concern following America's entry into the war was felt for American Catholic missionaries in the new war zones. It was reported there were 1,200 American Catholic missionaries in the Pacific areas of hostility.

Cardinal O'Connell, of Boston, observed the thirtieth anniversary of his elevation to the Sacred College, while Cardinal Dougherty, of Philadelphia, was named Papal Legate to the Eucharistic Congress in the Twin Cities and made a tour of several South American countries. Three dioceses held Synods, the first such meetings in two of them, Fargo and Toledo, and the fifth in Sioux City. Observances commemorating anniversaries of the great Social Encyclicals, "Rerum Novarum" and "Quadragesimo Anno," were held throughout the country. Thousands of copies of the Encyclicals were distributed.

Many other centenaries and anniversaries were noted, including: the golden jubilee of the Diocese of Salt Lake; the tercentenary of the Sulpician Fathers and the one hundred and fiftieth anniversary of their arrival in America and the founding of St. Mary's Seminary, Baltimore; the centenary of Fordham University; the centennial of the Sisters of the Holy Cross; the tercentenary of Catholicism

in the Northwest and the centenary of the first Mass in Minnesota; the golden jubilee of the Sisters of the Blessed Sacrament for Indians and Colored People, the two hundredth anniversary of the approval of the Passionist Fathers

Principal event among the religious Orders in the country was the transfer to Washington of the Generalate of the Congregation of the Holy Cross from the University of Notre Dame, where it had been located for 35 years. The National Organization of Decent Literature continued its activities to purge publications of obscenity and was aided greatly in its work by campaigns led by municipal officials in many places against indecent reading matter. Through the Legion of Decency, the Church redoubled its efforts for clean motion pictures, as a revival of cinema lewdness was reported gaining. The Revised New Testament was completed and distributed under the sponsorship of the Confraternity of Christian Doctrine. More than a half million copies were sold by September following the release of the new version in June.

National Catholic Welfare Conference. The National Catholic Welfare Conference engaged in many activities, increased by the stepping-up of the national defense program and the spread of the war. Outstanding work of the Administrative Board was the coordination of Catholic war relief efforts under the Bishops' Relief Committee. Conducting a single fund-raising campaign by letters and special coast-to-coast broadcasts, the Committee urged Passion Sunday as a day for the collection of relief funds in Catholic churches throughout the nation. Meanwhile, the Bishops' Committee reported that, as of March 5, a total of \$312,587 96 had been expended in extending relief to refugees of Poland. The Committee presented \$5,000 to the American Red Cross for the relief of the suffering in China, and in August announced that funds totalling \$245,000 had been allocated, of which \$93,000 was to be sent abroad for relief, and \$152,000 expended in this country on refugee and war relief. The cornerstone for the new headquarters building in Washington was laid in August and a competition inaugurated to secure the model for the statue of Christ the Light of the World, which will be located in the facade of the new building.

The Administrative Board, elected at the 1941 Meeting of the Hierarchy, met and organized as follows: Archbishop Edward Mooney of Detroit, Chairman; Archbishop Samuel A. Stritch, of Chicago, Vice-Chairman and Treasurer; Archbishop Francis J. Spellman, of New York, Secretary. Chairmen elected were: Department of Education Archbishop John T. McNicholas, O.P., of Cincinnati; Department of Catholic Action Study Archbishop John G. Murray, of St. Paul; Department of Lay Organizations Bishop John F. Noll, of Fort Wayne; Press Department Bishop John M. Gannon, of Erie; Legal Department Bishop Hugh C. Boyle, of Pittsburgh; Youth Department Bishop John A. Duffy, of Buffalo, Social Action Department Bishop Edwin V. O'Hara, of Kansas City. The Rt. Rev. Msgr. Michael J. Ready was again appointed General Secretary and the Rev. Dr. Howard J. Carroll Assistant General Secretary.

The Pope. Pope Pius XII repeated his pledge that he would never cease, "in work and prayer, to do all that is possible to hasten the return of peace." This promise he fulfilled daily, in exhortations, in audiences, in calls for prayer, in his active solicitude for "the victims of warfare." Through the Vatican's Office of Information on War Prisoners, the Pope labored to reunite, at least by the reestablishment of communications, war prisoners and their fam-

ilies; engaged in enormous activity to bring relief to the victims of the war, particularly the Poles, but always without regard for nationality; distributed sums through Church representatives in various countries for aid to the needy and impoverished; instructed Papal representatives in all war-torn countries to visit prisoners and bring them consolation. The Pope was grateful for the aid sent by American Catholics, which constituted the major portion of his fund for the relief of the Polish people.

The Vatican. The Sacred College of Cardinals, 17 short of its full complement, was further reduced by the deaths of Cardinals Kaspar, of Prague, Schulte, of Cologne, and Lauri, Grand Penitentiary. While many causes were discussed and advanced, only one Beatification took place—that of Blessed Magdelene di Canossa, Foundress of the Daughters of Charity. However, two canonizations were decided upon by the Congregation of Rites—those of Blessed John of Britto, Portuguese Jesuit martyr of the seventeenth century, and Blessed Bernardino Realini, Italian Jesuit who died in 1616.

The Holy See maintained diplomatic relations with 35 other nations, as of December, 1940. The list of accredited diplomats included Myron C. Taylor, President Roosevelt's personal representative at the Vatican. Two important international agreements between the Vatican and other States were concluded. Foremost was the agreement signed at Madrid regarding the appointment of Bishops. The freedom of the Vatican in the choice of new members of the Spanish Hierarchy was assured. A convention between the Holy See and Haiti regarding the administration of church properties was ratified.

Like the Pontiff, the various Congregations and agencies of the Holy See functioned at an almost unprecedented pace. There were 1,730 separate ecclesiastical jurisdictions throughout the world, including 1,218 residential Sees, 54 abbeys and prelatures nullius, 485 vicariates and prefectures apostolic and independent missions. Orders and Congregations of the Pontifical Rite had 789,338 members.

The Sacred Roman Rota reported that it had affirmed the nullity of marriages in only about one fourth of the cases which were before it. Decisions were given in 80 cases, of which 76 involved the question of nullity.

Education. Bishop Joseph M. Corrigan was reappointed Rector of the Catholic University of America for a term of five years. The faculty of the School of Sacred Theology of the Catholic University of America was enlarged to meet the additional demand for clerics occasioned in part by the need to replace those who have joined the armed forces as chaplains.

Three new Catholic colleges were established—Gannon College in Erie, Mercy College in Detroit, and Barry College in Miami. St. John's University Law School, Brooklyn, absorbed the New York Law School. The new \$3,000,000 Cardinal Hayes Memorial High School was opened. The Catholic Summer School of America marked its golden jubilee. Cardinal O'Connell purchased and presented the Louis K. Liggett estate to adjoining Boston College. Dr. George H. Derry was named President of St. Joseph's College, Portland, Me., and Dr. John L. McMahon, of the Catholic University, was named President of Our Lady of the Lake College, San Antonio. The five Summer Schools of Catholic Action drew an attendance of 6,643. A total of 132 inter-American scholarships were awarded last school year and 109 new scholarships were awarded by 144 Catholic institutions of higher learning.

Pacific Area. The spread of the war in the Pacific brought further difficulties for the Church and her missions. Prior to the outbreak between Japan and the United States, the Nipponese Government legally recognized the Catholic Church in Japan, although it adopted a "non-foreign policy." The Holy See, in 18 decrees, adapted the Church to the new Japanese policy and entrusted all ecclesiastical districts to native clergy. Other present theaters of war in the Pacific—Indo-China and Thailand—had already presented mission difficulties. Hostilities between Indo-China and Thailand hampered mission work, but the apostolate was resumed after those disturbances were settled. The Far Eastern War threatened to impede mission work again.

Although China struggled for the fifth consecutive year to repel the Japanese forces, Archbishop Mario Zanin, Apostolic Delegate, reported to the Holy See a promising picture of Church progress in that invaded nation. Conversions for the year covered to August totalled 103,900 and seminarians increased from 6,713 to 7,028. Missionaries continued their work under constant air-raid dangers and many were killed. More church property also was destroyed and damaged, in air-raids, notably St. Mary's Cathedral in Chungking.

The Dutch East Indies aided Catholic mission schools faced with the necessity of closing for economic reasons. Up to the Pacific war the 601,570 Catholics had made the Church in the Dutch East Indies practically self-supporting. Siam adopted the Gregorian Calendar after a long dispute over such a reform.

Spain Despite reported Nazi pressure, Spain remained aloof from involvement in the war. The nation went about the work of religious, material, and social reconstruction. Among activities in the country were: Conclusion of the agreement with the Holy See concerning the nominating of ecclesiastics for vacant episcopal sees; celebration of the fourth centenary of the Society of Jesus; observance of the Social Encyclical anniversaries; formation of a national society to speed up the reconstruction and repair of churches destroyed or damaged in the civil war; enlisting of Catholic Action groups to aid in the evangelization of the "Red Belt" in Madrid; decrees for the protection of the family and the closing of all birth control centers; organization of Catholic men affiliated with Catholic Action, particularly the Association of the Fathers of Families, to cooperate with ecclesiastical and civil officials in the rejuvenation of the spiritual and social life of the nation.

Poland. Poland suffered in the East and the West, at the hands of both German and Russian invaders. The Nazis matched Soviet terrorism with wholesale persecution, including confiscation and executions, in which, it was reported, in August, 330 priests were shot and 1,000 died in prison. Reports of conditions in Poland were made by Cardinal Hlond, Primate of Poland, to the Vatican. Ignace Jan Paderewski died in the United States in July.

Germany. Expansion of the Reich's war efforts in no sense minimized the prosecution of the Nazi war on Christianity. Archbishop Conrad Groeber, of Freiburg-im-Breisgau, in a pastoral letter, declared the war had increased the ills of the Church in the Reich. The Archbishop's letter was one of several open statements by German prelates charging Nazi determination to obliterate the Church in the Reich. The Hierarchy of Germany, in a published statement, protested the oppressive measures against the Church and called upon the faithful to remain staunch in their faith. Denunciation by Bishop Clemens August Count von Galen, of Muenster, of

methods used by the Gestapo caused a sensation throughout Germany and the occupied territories. The denunciation occurred in a series of sermons, which were among the most momentous utterances of a German prelate since the outbreak of the war. In July, Bishop Franz Bornewasser, of Trier, had protested against Gestapo expulsion of religions.

In late summer Nazi officials were reported to have begun a systematic suppression of the few remaining Catholic publications of Germany; it was revealed the Nazis had confiscated 14 monasteries and schools of the German missionary Society of Steyl, depriving 340 priests, 500 theological students, 1,650 lay Brothers, and 2,200 students of homes and support; an internationally-known Catholic emigrant-aid organization, St. Raphael's Verein, was dissolved and many of the priests arrested; all houses of the Benedictine Missionary Congregation of St. Ottilian were closed; the famed Maria-Laach, Benedictine monastery in the Rhineland, was taken over by German authorities, 10 other Benedictine abbeys were dissolved, and a further six "evacuated." By the end of the year it was reported that 74 abbeys, seminaries, convents, houses of study and other establishments were wrenched from Catholic religions, more than 25 Orders being affected.

Mexico. Many things happened in Mexico that were heartening to Catholics of the world. Early in the year President Avila Camacho's administration proposed legislation to amend the notorious Article 3 of the Constitution, the Socialist Education measure. Educational reforms generally were sought by such bodies as the National Action Assembly, the National Union of Parents, and a group of forty high ranking military officers, framers of the Constitution and chiefs of the Revolutionary Party. In an August press interview, President Avila Camacho promised the educational problem would be settled before the end of the year and that "freedom of conscience and respect for family creed" would be guaranteed in the process. The President's address at the opening of Congress in September was marked by emphasis on the need for resurgence of spiritual values in the world. Another important event was the decision of the Supreme Court that the Education Law of 1935, enabling act of Article 3, was unconstitutional.

Canada. An appeal of Cardinal Villeneuve, Quebec, for unity and the celebration of a "Victory Mass" gave further impetus to Catholic war work in Canada. The Knights of Columbus and the Catholic Women's League led the Catholic laity in assisting the men in the armed forces, which had 200 Catholic chaplains in September.

Latin America. The Prefecture of the Bahamas was elevated to the rank of a Vicariate with the Most Rev. John B. Kevenhoerster, O.S.B., as Vicar Apostolic. Haiti inducted a new President, the former Catholic Minister to the United States, Elie Lescot. Over protests of the Hierarchy, the Nicaraguan Congress enacted a law giving preference to civil marriages over religious ceremonies and making civil marriages compulsory. Archbishop Louis Centoz, former Apostolic Nuncio to Lithuania, was named Nuncio to Costa Rica, Nicaragua, and Panama.

Outstanding event in the ABC countries of South America was the National Eucharistic Congress in Santiago, Chile, attended by a half million Catholics from all parts of South America, and even the United States. Cardinal Copello of Buenos Aires, was Papal Legate to the Congress, which was climaxed by a radio address by the Pope. The Chilean Hierarchy issued an important decree im-

posing excommunication upon those guilty of perjury in processes seeking annulment of civil marriage contracts. The Argentine Hierarchy issued a joint pastoral urging a Crusade of Good Will in the interest of the working classes. Catholic Action, inspired by the Encyclical anniversaries, petitioned the Chamber of Deputies for a new law that would assure family allocations to all wage-earners. The new Catholic University of Brazil in Rio de Janeiro, opened.

The vexing problem of religious instruction in Venezuelan schools showed definite improvement. Both Church and State intensified efforts to instill religious principles in youth. A Catholic radio station, "The Voice of the Country," was inaugurated in commemoration of the Encyclical Jubilees and the silver episcopal jubilee of Archbishop Felipe Rincon Gonzalez, of Caracas. In December, the Ecuadorian Government conferred the Grand Cross of the National Order of Merit on Archbishop Carlos Maria de la Torre, of Quito.

England. German bombs destroyed many religious institutions in England. Amid the ruins sprang up a movement named the Sword of the Spirit, initiated by Cardinal Hinsley, of Westminster, to unite all Christians in defense of Christianity against the aggressive paganism of dictator countries and to lay the foundations for a peace based on the five points of the Holy Father's program. In Lenten pastorals, the Bishops of England and Wales dealt with the problems, social and economic, that would be faced after the war and urged that Christian principles be chosen for the solution. The Catholics of England joined with their fellow countrymen in the National Day of Prayer and themselves set aside a week for prayer and penance. In April the British Ministry of Information announced that 2,659 churches in Britain had been hit, 714 destroyed or seriously damaged, and 1,945 damaged less seriously. Of the destroyed buildings 58 were Catholic. Hundreds of priests and Catholic laity died in the air raids. The British Catholic Directory showed the Catholic population of England and Wales to be 2,414,000, an increase of 7,583 over the previous year. The Scottish Catholic Directory disclosed that the Catholic population of Scotland was 614,469.

Italy. The English, Scots, and Beda Colleges in Rome, vacated just before Italy entered the war, were taken over by Italian authorities, the first as a military hospital and the other two as shelters for child refugees from Africa. Genoa's Cathedral was damaged in a bombardment and closed. The celebration of national holidays, holy days, and civil solemnities was suspended by decree of the Italian Government for the duration of the war. The Sacred Congregation of Seminaries and Universities suffered a heavy blow when fire destroyed the Pontifical Seminary at Catanzaro.

ROWING. The eight-oared crews of the University of Washington and Harvard University rowed supreme in 1941. The huskies from the Far West conquered everything in sight and wound up win-

ners of the Poughkeepsie Regatta. Harvard won every race entered, and finished with a crushing triumph over Yale in the annual four-mile trip on the Thames at New London. Washington and Harvard never met to settle argued supremacy.

The domination of the four-mile races—Washington was coached by Al Ulbrickson and Harvard by Tom Bolles, former Ulbrickson assistant—by the West brought about conversation calculated to make the races at lesser distances another year. In the sprint races in the East Harvard was easily best, winning the Adams, Rowe, and Compton Cups, while the Harvard lightweight took the triangular race from Yale and Princeton.

The club rowing championship was held at Minneapolis, and Joe Burk, sculling champion, retired undefeated. The new sculling champion was a Canadian, Ted Dubois, who defeated Joe Angyal, a New Yorker, in the final. The Fairmount Rowing Association of Philadelphia succeeded the Penn A.C. to the national eight-oared title.

RUANDA-URUNDI, Territory of. See under BELGIAN CONGO.

RUBBER. The end of 1941 found the domestic rubber manufacturing industry faced with the realization of having its crude rubber supplies from the Far East cut off. The United States was not entirely unprepared. Initiation of the Japanese attack found the country with a stockpile of approximately 600,000 long tons on hand and some 150,000 tons afloat, the major portion of which is expected to reach these shores. Months before the attack, the Office of Production Management (q.v.) took over the supply and distribution of rubber. The initial order, of June 20, 1941, had as its objective the curtailment of consumption by at least 20 per cent. At the end of the year the use of rubber was forbidden in the manufacture of any

tween the United States and various Latin American countries, including Brazil, Haiti, Ecuador, and Mexico, have been concluded. As a result of these efforts, a substantial portion of the United States' normal annual requirements will be available from Latin America within the next decade. It takes from seven to ten years for a rubber tree to reach full bloom and maturity for tapping. In the interim,

products except those intended for military use and a few essential civilian products, largely those necessary to industrial production and the maintenance of health and morale. On June 23 the Rubber Reserve Company, organized to amass the emergency stockpile of rubber, became the sole importer of crude rubber from the Far East. On August 6 it set the price of No. 1 ribbed smoked sheet at 22½¢ per pound.

In the meantime, plans for the cultivation of crude rubber on a wide scale in all Latin American countries, in which the Department of Agriculture is closely cooperating, have proceeded rapidly. Nurseries have been established. Millions of disease-resistant seeds, brought from the Far East and other cultivation centers, have been generously donated and have been planted. Special pacts be-

efforts are being made to increase shipments of "wild" or Para rubber from the Amazon area where millions of untapped trees abound.

The situation at the end of the year was: (1) Consumption of rubber was drastically curtailed; (2) Tires and tubes were rationed to the public; (3) Price ceilings were applied to new and used tires and tubes, and to retreads and retreading; (4) Plans were afoot to increase production of synthetic rubber, guayule, reclaimed rubber, Para rubber, and other so-called substitute materials. The rubber manufacturing industry faced further regulations. (See also CHEMISTRY, INDUSTRIAL, under *Rubber*.)

As was to be expected, development of new rubber products during the year were largely of a military nature. New types of gas masks, barrage balloons, half-tracks for tanks, puncture-proof tubes, bullet-sealing fuel tanks, and countless other military products, appeared. Many of the larger rubber companies turned to production efforts other than in rubber. Goodrich constructed a shell-loading plant in Texas, Goodyear an airplane parts factory in Arizona; Goodyear and General Tire bag-loading plants in Indiana and Mississippi, respectively, U.S. Rubber a small arms munitions plant in Iowa. During the year Firestone formed the Firestone Aircraft Corporation to consolidate its production of aircraft materials and equipment, including its rubber products falling into that classification.

There were, of course, numerous rubber products of a general nature introduced. These included rubber foot flexers, latex figure masks, toplifts of rubber and leather, rubber springs for mine cars, all-rubber shower shoes, all-rubber electrical plugs, conductive rubber flooring, and rubberized cotton fabric balloons used in a unique method of constructing defense homes of concrete rapidly. The development of a method of processing Koroseal, the polyvinyl chloride produced by Goodrich, into a transparent and highly durable film was announced. A new method for producing rubber relief maps from latex was patented. Radiant heat was successfully applied to the manufacture of latex-coated materials.

Several new mechanical developments came to the fore. These included a three-roll wrapping machine for wrapping short lengths of hose and tubing, a device which detects and locates tramp iron in rubber and other products, including chicle and plastics; machinery for debanding scrap tires, which will result in the saving of several millions of pounds of scrap rubber annually; large capacity continuous extruding machines; and an unwinding device which assures continuous uniform tension on the web of material such as rubberized fabrics. Of special interest was a machine, developed by Firestone, the nature of which is at present a military secret, which changes rubber from raw material to finished self-sealing fuel tank linings. See BUSINESS REVIEW under *Restrictions Under the Defense Program*.

M. E. LERNER.

RUMANIA. A monarchy of southeastern Europe. Capital, Bucharest. King, Michael I, who ascended the throne Sept. 6, 1940, upon the abdication of his father, Carol II.

Area and Population. As a result of successive territorial cessions made during 1940, the area of Rumania was reduced from 113,884 square miles to about 74,884 and the population from an estimated 19,422,600 to approximately 13,000,000 at the census of Apr. 6, 1941. The recovery of Bessarabia and Northern Bukovina in July, 1941, as a

result of the German-Russian war (see *History* below) gave Rumania a total area of about 93,772 square miles and a population of some 16,800,000. The territories permanently ceded were Northern Transylvania (area, about 19,300 square miles by Rumanian estimate; population, 2,385,987) and Southern Dobruja (area 2,982 square miles; population, 378,344). Northern Transylvania was ceded to Hungary on Aug. 30, 1940, and Southern Dobruja to Bulgaria on Sept. 7, 1940. About 1,150,000 Rumanians and 1,200,000 Magyars and other non-Rumanians were estimated to have been ceded to Hungary with Northern Transylvania, while Bulgaria obtained an estimated 78,000 Rumanians and 300,000 non-Rumanians in Southern Dobruja.

Estimated populations of the chief cities on Jan. 1, 1939, were: Bucharest, 648,162 (nearly 1,000,000 in April, 1941); Chisinau (Kishenev), 112,500; Cernaui (Czernowitz), 109,698; Iasi (Jassy), 104,471, Galati (Galatz), 102,232, Cluj (ceded to Hungary), 100,272; Timisoara (Temesvar), 89,872, Oradea-Mare (ceded to Hungary), 80,872.

Education and Religion. Infant and primary schools of all types in 1938-39 numbered 19,394, with 2,623,000 pupils; secondary schools, 925, with 204,254 pupils in 1937-38. Adult primary schools had 669,187 enrolled (1938-39). Besides various special and vocational schools, there are three universities—at Bucharest, Iasi, and Cernaui—with 30,771 students in 1937-38. The university of Cluj was transferred to Hungary in 1940. According to a 1938 estimate, there were 13,200,000 Orthodox Church members, 1,426,813 Greek Catholics, 1,500,000 Jews, 1,200,000 Roman Catholics, 720,000 Reformists, 400,000 Lutherans, 260,000 Moslems, and 75,000 Unitarians.

Production. About three-fourths of the population are engaged in agriculture. The kingdom normally produces an export surplus of cereals, livestock, and animal products. Production in 1939 was (in metric tons): Wheat, 4,452,800, barley, 816,400; rye, 431,500, oats, 487,000; corn, 6,051,200; potatoes, 1,988,400; beet sugar, 127,900; tobacco, 14,400. Wine output, 11,542,000 hectoliters.

After Russia, Rumania is Europe's leading petroleum producer. Output in 1940 was 43,231,000 bbl., of which about 28,500,000 bbl. were exported (largely to Germany). Mineral and metallurgical production in 1940 was estimated as follows (in metric tons): Coal, 2,600,000; iron ore, 130,000; pig iron, 140,000, manganese ore, 40,000, copper, 600; lead, 5,200; bauxite, 40,000; and molybdenum ore, 160. Industrial establishments in 1937 numbered 3,512 with 278,919 workmen. Flour milling, brewing, and distilling are the leading lines.

Foreign Trade. The following figures are in millions of lei (1 lei equaled \$0.0054 at official rate in 1941). Imports, 27,411 in 1940 (22,890 in 1939); exports, 36,780 (26,809). Chief 1940 imports: Iron and its products, 6,421; machinery and apparatus, 4,766; other metals, 3,487; vehicles, 2,895; textiles, yarn, cloth, etc., 3,104; chemicals, dyes, drugs, etc., 1,641. Principal exports: Petroleum and products, 23,002; cereals, 6,727; animals and animal products, 2,057; wood and its products, 1,823. Imports from Germany in 1940: 13,870 (9,000 in 1939); Bohemia-Moravia, 3,761; Italy, 2,611. Exports to Germany in 1940, 16,025 (8,665 in 1939); United Kingdom, 3,866; Italy, 3,446. See TRADE, FOREIGN.

Finance. The budget for the year 1939-40 estimated ordinary revenue and expenditure, alike, at 32,229 millions of lei. A special budget for national

defense carried an additional 6,000 millions. Public debt, Apr. 1, 1939, 104,127.4 millions.

Transportation. The state railways in 1940 had 9,505 miles of line; in 1938 they carried 48,731,000 passengers and 21,999,000 metric tons of freight. Highways extended 67,330 miles (see **ROADS AND STREETS**). The state operated regular steamship services on the Danube and Black Sea, and also an air network connecting the principal cities. The German air network also took in Bucharest.

Government. The Constitution of Feb. 27, 1938, was suspended and Parliament dissolved on Sept. 5, 1940. By royal decrees of Sept. 5-6, 1940, all of the governing powers, except command of the army and the rights to issue currency and grant decorations and amnesty, were transferred to Gen. Ion Antonescu, who was appointed Head of the State and Premier on September 6. King Carol's Front of National Regeneration, which in 1938 replaced all political parties, was replaced by the pro-Nazi Iron Guard on Sept. 15, 1940, when Rumania was proclaimed a National Legionary State. The Iron Guard's monopoly of political power was ended Feb. 15, 1941, in favor of a military dictatorship (see below).

HISTORY

The partial dismemberment of Rumania by Russia, Hungary, and Bulgaria in 1940, and the establishment of a German protectorate over the remnants of the kingdom (see **YEAR BOOK** for 1940, p. 665 f.) drew Rumania deeper into the morass of civil and foreign war in 1941.

Iron Guard Revolt. On January 21 an extremist faction of the Fascist Iron Guard launched a bloody revolt against General Antonescu and his totalitarian regime. The Iron Guard was primarily responsible for the overthrow of the parliamentary system, the forced abdication of King Carol, and the establishment of the Antonescu dictatorship. But its extremist leaders were fanatical nationalists. They bitterly resented Antonescu's growing subservience to Germany and his supine acceptance of the Axis "arbitral award" giving Northern Transylvania to Hungary. They also became indignant at the dictator's failure to carry out a "total" social and economic revolution against capitalists, Jews, and old-line politicians.

Mounting resentment at the rapid extension of German political and economic control led to the assassination of a German army major in Bucharest January 21. A clash between pro-Nazi demonstrators and extremist Iron Guardists in the capital the following day was the signal for a wide-spread revolt by the extremists under Vice Premier Horia Sima. The latter faction occupied the Bucharest police and radio stations and other important public buildings there and in other cities. However the army remained loyal to Antonescu and after four days of severe street fighting the revolt was crushed. According to a subsequent statement by the Ministry of Interior, the casualties included 370 killed and 444 wounded in Bucharest alone.

The revolt riveted German control more firmly upon the unhappy kingdom. Although German troops took little part in the fighting, they took up positions at strategic points throughout the country and markedly strengthened Antonescu's hand. At the height of the crisis, the dictator warned his enemies that "the loyal shadow of the German Fuehrer stands behind me." With the collapse of the revolt, which was marked by Iron Guard excesses against the Jews, Antonescu ordered a large-scale round-up of Iron Guardists. By mid-February

some 7,000 were imprisoned. More severe penal laws were enacted and military courts meted out heavy punishment, including numerous death sentences. Iron Guard organizations were dissolved and their funds confiscated. Sima, however, escaped the police dragnet and was later reported in both Berlin and Budapest. It was indicated that the Germans were holding him in reserve as a possible substitute for Antonescu in case the latter swerved from his pro-German course.

New Government Formed. With the power of the Iron Guard broken, at least temporarily, General Antonescu established a full military dictatorship. Army officers formed a large majority of the new Cabinet announced January 27. General Antonescu remained both Premier and Foreign Minister. At the same time he placed a large number of industries under direct army control. On February 2 he announced that as soon as order was restored, he would establish a National Socialist state based on Nazi-Fascist doctrines.

On February 25 he called a nation-wide plebiscite for March 3-5 to express "approval or disapproval" of his regime. Electoral regulations issued at the same time barred an estimated 750,000 Jews from voting, made voting compulsory for all other persons over 21 years of age, and forbade speeches or manifestations of any sort. Demonstrators were threatened with five years' imprisonment. These provisions, coupled with the usual Government manipulation of the polls, insured the outcome. On March 5 it was announced that the vote was 2,490,944 to 2,816 in favor of the Government. The mounting evidences of internal unrest during ensuing months underlined the inadequacy of the plebiscite as an index of public opinion.

Economic Difficulties. A serious food shortage developed, although agricultural Rumania is normally the bread basket of Central Europe. Two breadless days a week were introduced May 11. Flour and sugar were rationed more stringently on May 24. At the end of July the meat ration in Bucharest was reduced to 250 grams monthly as compared with 1,600 grams monthly in Germany. Food prices were reported to have increased ten-fold in the year ended in July. On October 26 the Government sought to check runaway prices by prohibiting an increase in prices, wages, and salaries beyond the level obtaining September 1. The food shortage was widely attributed to the presence of large numbers of German troops in Rumania and to abnormally large exports of grain and meat to the Reich and its allies. The Antonescu Government took severe measures to curb Communist and Allied propaganda, which made telling use of this situation.

Foreign Policies. The consequences of pursuing a foreign policy dictated in Berlin earned Antonescu further hostility among his predominantly pro-Ally countrymen. Britain, which with France had guaranteed Rumania's independence and territorial integrity in 1939, broke off diplomatic relations February 10 because Antonescu had authorized large numbers of German troops to enter the country. Bucharest instituted nightly blackouts as a precaution against possible British bombing raids. On February 15 the British blockade was clamped upon Rumania and all goods of Rumanian origin or ownership were rendered liable to seizure.

Free Rumania Movement. Meanwhile the Rumanian Minister to London, Dr. Viorel Tilea, had resigned in protest at Antonescu's capitulation to Berlin. With the assistance of the British Ministry of Information, he launched a Free Rumania movement, which was supported by the Rumanian chargé

d'affaires and several other members of the London Legation. Early in the autumn Charles Davila, former Rumanian Minister to Washington, arrived in the United States to promote the Free Rumania movement there. It was said to have the support of Juliu Maniu, leader of the powerful Peasant party, and other pro-democratic leaders in Rumania. In December this movement received the endorsement of ex-King Carol, who in March escaped from "protective custody" in Spain and finally took refuge in Mexico City.

Collaboration with Nazis. After crushing the Iron Guard revolt, Premier Antonescu carried out his announced policy of "supporting the Axis without hesitation." German troops, estimated at 350,000 by the retiring British Minister, were concentrated in southern Rumania. They constituted a vital part of the diplomatic, military, and economic pressure which brought Bulgaria into the Axis fold on March 1. On February 21 it was announced that the Germans had obtained management control and half ownership of the Melaxa steel and munitions works, which almost monopolized the manufacture of arms, munitions, and locomotives in Rumania.

On March 5 Antonescu conferred with Reich Marshal Hermann Goering in Vienna. Upon his return to Bucharest he announced March 8 that he had given Hitler, Mussolini, and Goering veto power over all Rumanian economic dealings with foreign countries. This move followed the signing in Moscow on February 26 of a two-year economic accord between Rumania and the Soviet Union—the first definite sign of friendly relations between the two governments since the Russian annexation of Bessarabia and Northern Bukovina in 1940. Beginning in March, the growing tension in Russo-Rumanian relations served as a barometer indicating the approach of the German conflict with the Soviet Union.

On March 25 Antonescu publicly declared that there could be no peace in southeastern Europe "until the Rumanian people are given justice or get it for themselves." In view of German control of Rumanian foreign policy, this reference to Rumania's lost territories was interpreted as a demand for the restoration of Bessarabia and Northern Bukovina rather than the Transylvanian districts awarded Hungary by the Axis powers. In his speech of March 8, Antonescu declared the presence of German troops in Rumania had enabled him to demobilize Rumanian forces at a saving of a billion lei. But the training of Rumanian reservists by German instructors was instituted in March. The German-Yugoslav crisis (see YUGOSLAVIA) and the conclusion of a Soviet-Yugoslav non-aggression and friendship pact was followed immediately by an order for general mobilization in Rumania on April 6.

Two weeks later Antonescu's War Minister called upon the nation "to wipe out the bitter traces left behind by the sorrowful year of 1940." For a time it appeared as though the Government was channeling Rumanian revisionist sentiment against Hungary, which was then engaged in helping itself to Yugoslav border territories. But the "crisis" between Hungary and Rumania died down at the end of April. The real objective of German-Rumanian policy was indicated by the withdrawal of the main Soviet forces from Bessarabia to a stronger defense line on the former Rumanian frontier in mid-May. German troops from the other Balkan countries and newly mobilized Rumanian forces were concentrated along the Russian border for a surprise attack, which began June 22.

Conflict with Russia. On June 11-12, Antonescu

conferred with Hitler and Joachim von Ribbentrop in Munich. According to Bucharest reports, Hitler promised to obtain for Rumania the provinces of Bessarabia and Soviet Moldavia. On June 22 Antonescu proclaimed a holy war against Communist Russia. At the same time he reportedly turned over his civil duties as Premier to his nephew, Mihail Antonescu, who was Minister of State. Martial law was declared.

Before the Russian air force was driven out of effective bombing range, Bucharest and many other Rumanian cities suffered heavy damage from Soviet air attacks. Much destruction of oil wells and installations also was reported. The Rumanian forces apparently fought willingly until the Russians were driven out of the territories annexed in 1940. But thereafter the army and the Antonescu Government displayed growing reluctance to press the invasion, which carried the Axis forces far into Russia at the cost of heavy casualties (see WORLD WAR).

The small number of Hungarian troops participating in the Russian campaign increased Rumanian resentment. It was feared that the Hungarians were conserving their forces to enforce their demand for the remainder of Transylvania. Late in July Berlin reportedly threatened to accede to Hungary's plea for the reopening of the Transylvanian question unless the Rumanians pressed the drive into Russia with more vigor. As a further spur, the Germans authorized the annexation of Odessa and its rich hinterland to Rumania.

But heavy casualties in Russia and the increasingly difficult economic situation at home undermined the morale of the Rumanian forces. The chief of staff of the army, Gen. Michael Joneacu, was killed at the front in mid-September. By the end of October dead and wounded were estimated at some 250,000. A number of generals, said to have joined the Peasant party leader, Juliu Maniu, in demanding termination of hostilities, were reportedly shot. Following the fall of Odessa, the main Rumanian forces halted their advance at the Bug River late in October. Many soldiers were then permitted to return home. However the heavy German losses and the Russian counteroffensive in December led Berlin to renew its demand for Rumanian troops, both to aid in Russia and to replace German forces withdrawn from the German-occupied countries for service on the Eastern and Libyan fronts. Although Rumania on November 25 had renewed its adherence to the Anti-Comintern Pact for another five years, this new demand encountered further resistance in Bucharest.

Transylvania Partition Repudiated. Meanwhile on October 22 it was reported that Rumania had denounced the Vienna Accord of 1940 under which Northern Transylvania was awarded to Hungary. It was suspected that this action was instituted by Germany in a move to obtain a greater military contribution from Hungary in Russia. Yet Rumanian hostility to Hungary ran deep, as was indicated by repressive and discriminatory measures taken against the Magyar minority in Rumania in July.

War with the Democracies. Popular opposition to Rumania's war alliance with Germany was intensified as a result of Britain's declaration of a state of war with Rumania on December 7. The various British dominions followed suit. After Japan's attack upon the United States, the Antonescu Government followed Germany in declaring a state of war with America on December 12. Under German pressure, Bucharest in July had closed U.S. consulates.

Internal Trends. These developments in the field of foreign affairs were accompanied by growing political tension in Rumania. Despite numerous arrests, the imposition of the death sentence for terrorism beginning April 18, and further assurances of Hitler's support, the Antonescu regime found its position more and more precarious. All firearms owned by private individuals were called in May 5. A revival of Iron Guard propaganda and terrorism commenced in May. With the opening of the Russian campaign, anti-Government propaganda and sabotage, attributed to Communists, assumed dangerous proportions. An anti-Nazi rising in Jassy late in June was put down only after three days of fighting, according to an Italian correspondent's report to a Rome paper.

The arrest of three prominent members of the Peasant party was reported late in July. On November 6 General Antonescu ordered another plebiscite to permit a vote on his pro-Nazi policies. In the plebiscite of November 9 Jews were again excluded, the voters were restricted to voting "yes," or "no," and those wishing to vote "no" had to declare their intention in advance to the authorities. This time the *Official Gazette* reported that only 34 registered disapproval of the Antonescu regime while 1,784,700 voted "yes."

RYE. The rye crop of the United States in 1941, estimated at 45,191,000 bushels by the U.S. Department of Agriculture, was 10 per cent larger than the 1940 crop of 41,149,000 bushels and 17 per cent larger than the 1930-39 average production of 38,472,000 bushels. A record high production of 100,896,000 was attained in 1922. The area harvested in 1941, 3,498,000 acres, was 9 per cent larger than the 1940 acreage of 3,210,000 and compared with the 1930-39 average of 3,320,000 acres. Acre yields averaged 12.9 bushels in 1941 and 12.8 bushels in 1940. Leading rye States were North Dakota with 13,516,000 bushels, South Dakota 7,510,000, Nebraska 4,278,000, Minnesota 3,540,000, Indiana 1,953,000, Wisconsin 1,633,000, and Ohio 1,332,000 bushels. The season average price per bushel (preliminary) received by farmers was 53.1¢ and the value of production was estimated at \$23,978,000 in 1941 compared to 41.6¢ and \$17,101,000 in 1940. See AGRICULTURE under *Crop Production*.

SAARLAND. See GERMANY under *Area and Population*.

SABOTAGE. See FEDERAL BUREAU OF INVESTIGATION; LABOR LEGISLATION; TRANSPORTATION DIVISION; UNITED STATES under *Civil Liberties*; each of the German-occupied countries and SOUTH AFRICA, UNION OF under *History*.

ST. CHRISTOPHER. Same as *St. Kitts*, see LEEWARD ISLANDS.

ST. HELENA. See BRITISH EMPIRE.

ST. KITTS. See LEEWARD ISLANDS.

ST. LAWRENCE SEAWAY. See CANADA under *History*; WATERWAYS, INLAND.

ST. LUCIA. An island colony in the Windward Islands group of the British West Indies. Area, 233 square miles; population (1939), 69,737. Castries (capital) had 12,000 inhabitants. Vital statistics (1939): 2,152 births, 1,375 deaths, and 382 marriages. Education (Jan. 1, 1939): 45 schools and 10,649 students enrolled. Sugar, copra, limes, cacao, and bananas are the chief products. Trade (1939): £222,153 for imports (coal £32,594) and £157,177 for exports (sugar £64,257, bunker coal £33,419, bananas £6,585). Shipping (1939): 1,531,416 tons entered and cleared.

Government. Finance (1939): £130,261 for revenue and £132,732 for expenditure. Public debt (1939): £115,889. St. Lucia is governed by an administrator (subordinate to the governor of the Windward Islands), assisted by an executive council. There is a legislative council (partly nominated and partly elected) over which the governor presides. Administrator, Arthur Alban Wright (appointed June 10, 1938).

History. The Anglo-American accord of Sept. 2, 1940, providing for establishment of United States auxiliary air bases in St. Lucia, was formalized in the treaty signed Mar. 27, 1941, in London (see GREAT BRITAIN under *History*). Under the lease annexed to the treaty, the British Crown transferred to the United States for 99 years (1) 245 acres of land fronting Gros Islet Bay near the northern tip of the island, for development as a seaplane patrol base, and (2) five pieces of land at Vieux Fort near the southern tip of the island, for development as a heavy land bomber patrol station. The areas leased at Vieux Fort included 1,000 acres along the coast between Pointe Sable and Anse Pointe Sable, a section 1,000 feet long and 500 feet deep along Vieux Fort Bay but excluding Vieux Fort village; 10 acres in Vieux Fort valley, for construction of a dam and reservoir for water supply, the right of way for the water conduit, and Maria Island. The United States agreed to keep open existing highways traversing the leased areas, or to build substitute highways outside. Work began immediately on the seaplane base at Gros Islet Bay, estimated to cost \$1,625,000.

It was announced in March, 1941, that a war tax had been imposed at a rate ranging from 5¢ on incomes of £50 to £1 on incomes of £200 and more. The income tax was increased by 30 per cent on incomes up to £1,000 and by 40 per cent on incomes of more than £1,000. The tax on companies was increased by 35 per cent.

ST. PIERRE AND MIQUELON. A French colony named after the main islands in two small groups, near the south shore of Newfoundland. Area: St. Pierre group—10 square miles, Miquelon group—83 square miles. Total population, 4,175. Capital, St. Pierre. The main industry is cod fishing. Trade (1940): 28,614,000 francs (28,735,000 for 1939) for imports and 16,475,000 francs (18,010,000) for exports (franc averaged \$0.0251 for 1939; official rate for 1940, \$0.0288). Textiles, wines, salt, and foodstuffs were the chief imports. Cod (fresh and dried) and fish products comprised the principal exports. Budget (1940): 13,738,690 francs. An administrator, assisted by a consultative council of administration, governs the colony.

History. The colony was under the control of the French government of Vichy, headed by Marshal Pétain, from the collapse of the French Republic during June, 1940, until Dec. 24, 1941, when an

expedition headed by Vice Admiral Emile Muselier, under orders from General Charles de Gaulle's "Free French" government, landed on the islands and removed the Vichy-appointed officials from office. A plebiscite was held immediately which showed a 98.2 per cent margin for the government of General de Gaulle. The complete vote was announced as: Free French, 783; void, 215; collaboration with the Vichy government, 14. Alain Savary, who was appointed commissioner, stated that the policy of his administration would be to "respect liberty" and to harness the resources of the islands to the cause of the Allies. See FRANCE under *History*; PAN AMERICANISM

ST. VINCENT. See WINDWARD ISLANDS.

SAKHALIN. An island north of Japan and near the east coast of Siberia. Area, 28,597 square miles. The northern part (north of 50° N), 14,662 square miles, belongs to the Union of Soviet Socialist Republics. Karafuto (q.v.), the southern part, 13,935 square miles, belongs to Japan.

SALES. See MARKETING FOR SALES TAXES, see States, as ARKANSAS under *Legislation*, TAXATION

SALVADOR, EL. A republic of Central America. Capital, San Salvador

Area and Population. The smallest and most densely populated of the Central American states, El Salvador has an area of 13,176 square miles and a population estimated at 1,744,535 on Jan. 1, 1940. Indians and mestizos constitute the vast bulk of the population, but the small ruling class is largely of Spanish descent. Populations of the chief cities in 1939 were: San Salvador, 105,494, Santa Ana, 86,667, San Miguel, 46,569, Santa Tecla, 34,313, Ahuachapán, 32,220, San Vicente, 30,000; Zaitatecoluca, 28,081; Sonsonate, 21,484. Births in 1939 numbered 71,694 (44,454 illegitimate); deaths, 31,656; marriages, 6,149.

Defense. Military service is compulsory in wartime. The active army on Jan. 1, 1941, numbered 3,370 officers and men (including the National Guard), with 78 men in the air force. Trained reserves totaled 728. Early in 1941, a U.S. Army officer, Lt. Col. Robert L. Christian, replaced a German officer as director of the Military Academy.

Education and Religion. Illiteracy remains widespread. At the beginning of 1941, there were 1,349 primary schools with 102,042 regular pupils and 27,452 in special courses for illiterates; 2,551 students in secondary schools; 218 students in four normal schools; 422 students in the National University; and 413 in the School of Music. Roman Catholicism is the dominant religion.

Production. Coffee, the main crop and chief support of the national economy, accounted for 76.5 per cent of the value of all exports in 1940 (83.6 per cent in 1939). The coffee export crop was 925,000 bags (of 132 lb.) in 1939-40 and 667,000 bags (estimated) in 1940-41. Sugar production from the crop harvested in 1940-41, 36,643,312 lb.; sugar production in 1940 was 308,977 quintals (of 101.2 lb.), of which 71,514 quintals were exported, cotton in 1940-41, about 9,000 bales (of 478 lb.). Rice, henequen, and indigo are other export crops. Corn and beans are the main food crops. The forests yield balsam and hardwoods. Cattle and hog raising are important local industries. Gold and silver are mined, the exports totaling 8,558 and 148,877 oz., respectively, in 1940.

Foreign Trade. Imports in 1940 were 20,270,100 colones (22,124,300 in 1939); exports, 30,569,900

(31,848,500). The main 1940 exports were (in U.S. dollars): Coffee, \$9,349,993; gold and silver, \$1,073,619; other minerals, \$756,286; sugar, \$210,575. The United States took 75.2 per cent of all exports by value in 1940 and supplied 67.4 per cent of all imports.

Finance. Including carry-overs from preceding years, budget estimates balanced at 22,047,000 colones in 1941 and 24,267,000 in 1940. Actual General Fund revenues in 1940 were 17,377,000 colones, expenditures, 20,107,000. The public debt on Apr. 30, 1941, was 42,872,000 colones (37,525,000 external and 5,347,000 internal), against 40,724,000 on June 30, 1939. Service of the foreign debt was suspended Nov. 27, 1937. The exchange rate of the colon was \$0.40 in 1939, 1940, and 1941.

Transportation. The two railway systems operating in Salvador (total of 378 miles of line) carried 885,132 passengers and 374,814 tons of freight in 1940. As of Jan. 1, 1941, commercial air services were provided by Pan American Airways and the T.A.C.A. network. During 1940, 2,758 passengers entered the country on all airlines and 2,747 left. Highways extended 3,709 miles in 1940. Progress on the Salvadorean section of the Inter-American Highway was speeded in 1940 by completion of a suspension bridge over the Lempa River with a central span of 820 feet. The chief ports are La Unión, Libertad, and Acajutla; during 1940 they were entered by 421 large and 618 small vessels which landed 2,437 passengers.

Government. The Constitution of Jan. 20, 1939, vests executive power in a President elected for six years and ineligible to succeed himself. Legislative power rests in the unicameral National Assembly of 42 members elected for one year by universal suffrage. President Maximiliano H. Martínez seized power through a military coup Dec. 2, 1931. After serving out his predecessor's term, he was selected for a four-year term beginning Mar. 1, 1935, and on Jan. 21, 1939, his term was extended for six years to Jan. 1, 1945, by a hand-picked Constituent Assembly (see 1939 YEAR BOOK, p. 693).

History. The position of Salvador with regard to the antagonism between the United States and the governments of Germany, Italy, and Japan became closely identified with that of the United States itself. Upon the outbreak of war between the United States and Japan the National Assembly, immediately summoned in session, declared, December 8, that Salvador was at war with Japan. Upon the German and Italian declarations of war against the United States, the Assembly voted, December 13, that Salvador was at war with Germany and Italy. The votes for declarations against all three nations were unanimous. Military training was ordered in December, for all males from 15 to 50 years of age.

Salvador's stand was not dictated by sentiment alone. Political circles had reasons of national advantage both to aid the United States and to oppose the powers forming the Axis. Salvador's foreign purchases needed the offset of exportation of coffee to the United States, as arranged under the existing system of agreements; and Salvador, being the only Central American country without an Atlantic port, risked a stoppage of its foreign trade in the event of a non-American power's dominating the seas off the Pacific coasts of Central America.

A deficient crop of coffee was gathered in late 1940 and early 1941, the weather in 1940 having been too dry for normal growth. The harvest was put at five-sevenths of normal. It somewhat more than covered the quota of the 600,000 bags allowed for Salvadorean exportation to the United States in

the ensuing year, by the inter-American coffee agreement. The prices obtainable prior to this agreement had fallen far short of the level satisfactory to the country, but they improved after the agreement had been made. This freed Salvador from the full severity of the economic threat, but there remained much difficulty, largely because the drought of 1940 had thinned the crops of corn and beans, so that the prices of these staple foods of the population threatened to cause hardship. Early in 1941 the government, seeking to exercise limitation over the harm apprehended in the foreign trade, established strict control over exports and reexports.

Salvador followed, in moderated degree, the example of Panama in restricting foreigners' privileges of doing business in the country. A law of July 27 prohibited the establishment of a new business enterprise by any member of one of a list of specified peoples: these were Arabs, Palestinians, Turks, Chinese, Lebanese, Syrians, Egyptians, Persians, Hindus, and Armenians. The law was said to have for its purpose the welfare of the small native business people. The existing business enterprises of members of the designated foreign groups remained lawful, except that they could not start new branch offices. Persons under the ban suffered disqualification on account of ethnic origin, whatever citizenship they might have acquired.

A crime bearing an appearance of foreign political motivation occurred in May. The German chargé d'affaires in Salvador, Richard von Heynitz, disappeared and was shortly found, shot to death. Not long before this, the German consul at Tegucigalpa, R. Motz, had died in a somewhat similar way. The German chargé d'affaires in Honduras, Christian Zinsser, was said to have been in each of the two countries when the killing there occurred.

See PAN AMERICANISM, LEND-LEASE ADMINISTRATION.

SALVATION ARMY, The. A world-wide organization with international headquarters at Denmark Hill, London, England, whose purpose is the salvation of mankind from all forms of distress—spiritual, moral, temporal. The movement was first organized as The Christian Mission in the East End of London in 1865 by William Booth, and, in 1880, was extended to the United States. The government is military in character with Gen. George L. Carpenter as international head. The doctrine of The Salvation Army is a simple evangelical creed based on the Methodism from whence it came.

The Salvation Army is now active in 97 countries and colonies, carrying on its work in 104 languages. There were in its service in 1941, 26,877 officers and cadets; 9,980 persons without rank wholly employed; 167,377 honorary local officers and bandsmen; 82,097 songsters; 35,770 corps cadets; and 17,816 corps and outposts in operation. Social welfare institutions and agencies numbered 1,673, free day schools 1,132, and Naval and Military Homes 35. It published 129 periodicals, with a total average circulation of 1,550,422 copies per issue.

There were in the United States in 1941, 1,662 corps and outposts, 4 Training Colleges, 4,891 officers and cadets, and 49,486 honorary local officers and bandsmen. Converts during the year numbered 65,701. Social Welfare institutions included 128 men's hotels and 17 residential hotels for young women, accommodating a total of 9,817. Men's Social Service Centers numbered 111 with accommodation for 5,554; 9 children's homes and hospitals with accommodations for 763; 35 women's homes and hospitals with accommodations for 2,150; and 2 dispensaries and 4 clinics which

treated 21,185. At Thanksgiving and Christmas free dinners were given to 559,262 persons and toys to 398,178 children. During 1941, 8,909 discharged prisoners and 2,632 parolees were assisted by The Salvation Army; 96,728 mothers and children were given summer outings; 55,665 men and women were given employment through the Army's 61 free employment bureaus; and 722 missing persons found. Salvage of waste paper and rags for national defense purposes approximated 360,000 tons. In 26 States from Maine to Hawaii The Salvation Army operates 45 United Service Organizations clubs for men in the armed forces.

The National Headquarters of The Salvation Army in the United States are at 120 West 14th Street, New York City. National Commander, Commissioner Edward J. Parker.

SAMOA. A group of 14 islands in the Southern Pacific, about 4,000 miles southwest of San Francisco. The islands of the group east of 171° W. longitude belong to the United States; those west of that line are administered by New Zealand under a mandate of the League of Nations.

American Samoa. American Samoa comprises the islands of Tutuila, Tau, Olosega, Ofu, Annuu, and Rose Island. Swains Island is included in the administrative district of American Samoa. The total area is 76 square miles and the estimated population on July 1, 1941, was 14,458, mainly Polynesian or part Polynesian. Pago Pago (on the island of Tutuila), about 1,000 inhabitants, contains a U S naval station—the seat of the government. In 1940–41 the average school enrollment was about 3,000. English is the language of instruction. Copra produced and exported during 1940–41 totaled 862 tons valued at \$23,557. Trade (year ended June 30, 1941): \$263,703 for imports and \$93,839 for exports. The islands are under the jurisdiction of the U.S. Navy Department and are administered by the commandant of the naval station at Pago Pago. There is a native advisory council called the Fono, which meets annually. In an Executive Order of Feb. 14, 1941, President Roosevelt announced that after May 15, 1941, no unauthorized aircraft or vessels would be permitted within three miles of the Samoan islands of Rose and Tutuila. The U.S. Congress during March, 1941, approved funds for defense aviation facilities at Samoa. Governor, Capt. Lawrence Wild, U.S. Navy (assumed office, Aug. 8, 1940).

Western Samoa. The islands under New Zealand's control are officially known as the Territory of Western Samoa. Area, 1,133 square miles. Population (July 1, 1940), 61,249, including 57,374 Samoan natives. Capital, Apia (on the island of Upolu). The natives are Christians of different denominations. There were 11,305 students enrolled in the schools. Copra, cacao, rubber, and bananas are the chief products. Trade (1939): £194,736 for imports and £220,409 for exports. Finance (year ended Mar. 31, 1940): £131,416 for revenue and £135,648 for expenditure. Shipping (1939): 98 vessels of 112,306 tons entered the port of Apia. The minister of external affairs for New Zealand is in charge of Samoa. Acting Administrator, A. C. Turnbull.

PURIFICATION; WATER WORKS AND WATER PURIFICATION.

SAN MARINO. An independent republic in Italy, near the town of Rimini. Area, 38 square miles; population (1939), 14,545. Capital, San Marino. Chief exports: cattle, wine, building stone. Financial estimates (1939-40) were balanced at 6,009, 919 lire (lira averaged \$0.0520 in 1939). The legislative power is in the hands of the grand council of 60 members elected by popular vote. Two are appointed from this council every six months to act as regents.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ AND PRINCIPE. See PORTUGAL under *Colonial Empire*.

SARAN. See CHEMISTRY, INDUSTRIAL under *Textiles*.

SARAWAK. See BRITISH MALAYA.

SASKATCHEWAN. A prairie province in western Canada. Area, 251,700 sq. mi, including 13,725 sq. mi. of fresh water. Population (1941 census), 887,747, compared with (1936 census) 930,893. Vital statistics (1940): 19,245 living births, 6,438 deaths, 7,805 marriages. Chief cities (1941 census): Regina, capital (57,389), Saskatoon (42,320), Moose Jaw (20,496), Prince Albert (12,299), Weyburn (6,119), Yorkton (5,586), Swift Current (5,515). Education (1938-39): 229,004 students in schools and colleges.

Production. The gross value of agricultural production for 1940 was \$231,734,000 (field crops \$172,979,000, farm animals \$26,188,000, dairy products \$19,646,000, poultry products \$7,214,000, fruits and vegetables \$4,117,000). In 1941 the chief crops were wheat 136,000,000 bu. (272,000,000 in 1940), oats 82,700,000 bu. (93,000,000), barley 28,000,000 bu. (23,500,000), rye 6,300,000 bu. (7,000,000), flaxseed 3,600,000 bu. (1,650,000), potatoes 129,250 tons (127,400), hay 650,000 tons (385,000), fodder corn 42,000 tons (37,000). Livestock (1940): 1,249,200 cattle (including 502,500 milk cows), 791,000 hogs, 398,700 sheep, 813,600 horses, 10,251,000 poultry. Furs (1938-39): 1,122,882 pelts worth \$983,447. Forest products (1939) were valued at \$2,243,000.

Mineral production (1939) was valued at \$8,794,090 (see YEAR BOOK for 1940; p. 670). Gold, copper, zinc, silver, coal, and sodium sulphate were the main minerals. Manufacturing (1939): 737 factories, 6,475 employees, \$7,346,127 for salaries and wages, \$20,283,273 net value of products.

Government. Finance (year ended Apr. 30, 1940): \$24,958,420 for revenue and \$25,258,324 for expenditure; net funded debt, \$196,065,676. Budget estimates (1940-41): \$23,857,395 for revenue and \$23,980,005 for expenditure. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. In the legislative assembly there are 52 members elected for a five-year term by adult male and female voters. Six senators (appointed for life) and 21 elected commoners represent Saskatchewan in the Federal parliament at Ottawa. Lieutenant Governor, A. P. McNab (appointed Oct. 1, 1936); Premier, W. J. Patterson (Liberal). See CANADA.

SCHOOLS. The U.S. Office of Education estimated that 31,566,000 pupils were enrolled in schools of all types in the United States for the school year 1941-42. The enrollments were distributed as follows:

Elementary	20,707,000
Secondary	7,334,000
Higher education	1,450,000
Nurse-training	100,000
Business colleges (day)	75,000
Evening and part-time	1,850,000
All other schools	50,000
Grand Total	31,566,000

Private schools accounted for 2,225,000 pupils of the total elementary enrollment and 500,000 of the total secondary enrollment (four years of high school). Forty thousand of the 625,000 kindergarten pupils were enrolled in private kindergartens. Entering the first grade for the first time were 2,090,000 pupils—200,000 in private schools and 1,890,000 in public schools. The estimated number of graduates for both public and private schools was as follows: Eighth grade, 1,900,000; high school, 1,275,000; college, 175,000.

Teachers in elementary schools totaled 700,000 for the school year (625,000 in public schools and 75,000 in private schools); high school teachers numbered 350,000 (315,000 public and 35,000 private). There were 115,000 one-teacher schools having an estimated 2,520,000 pupils. The number of pupils to be transported at public expense was 4,600,000.

Higher Education. For detailed statistics, see UNIVERSITIES AND COLLEGES.

State School Systems. The latest final figures on public education in the United States pertain to the school year 1937-38 and were published in 1941 as the result of the Biennial Survey of Education in the United States conducted by the U.S. Office of Education. In that year there were 25,975,108 pupils enrolled in the State School Systems of continental United States; 13,185,970 were boys and 12,789,138 girls; 19,748,174 were in kindergartens and elementary schools and 6,226,934 in secondary schools. The average daily attendance was 22,298,200.

The instructional staff comprised 4,965 supervisors, 36,484 principals, and 877,266 teachers, a total of 918,715 persons, who received an average annual salary of \$1,374. Of the total, 184,923 (21.1 per cent) were men. Private and parochial schools employed 95,103 teachers and enrolled 2,687,483 pupils in elementary and secondary grades; Catholic schools 79,194 teachers and 2,431,289 pupils.

Total expenditures in all public schools were \$2,233,110,054, a total cost of \$17.15 per capita for education. The cost per pupil enrolled was \$76.39 for current expense and \$9.20 for capital outlay. There were 229,394 school buildings in the country, of which 121,178 were one-room, one-teacher schools. The value of public property used for school purposes was \$7,115,377,402. Separate schools for Negroes are maintained in the District of Columbia and 17 States where 25 per cent of the population is Negro; enrollment in these schools was 2,411,967. They were accommodated by 60,641 teachers and 1,088 supervisors.

See also the section on *Education* under each State.

Trends. According to the U.S. Commissioner of Education, John W. Studebaker, the training of

workers for defense jobs would continue to increase in 1941-42. Enrollments in Federally-aided vocational schools and classes, which rose from 1,247,000 in 1935 to 2,290,000 in 1940, were expected to increase proportionately for the ensuing year. Colleges and universities were organizing more short-course defense-training classes. As a result of the entry of men into the Army, there was a rise in the number of women teachers and in the proportion of women students in colleges.

The low birth rate of several years ago resulted in decreased enrollments in kindergartens and elementary schools. By the same token, a decrease in high school enrollments might have been expected, but on the contrary they increased from 7,234,000 estimated for 1940-41 to 7,334,000 for 1941-42. The increase was attributed in part to higher compulsory school-attendance age in many communities, greater emphasis upon vocational preparation, and financial aid to students. About seven of every ten young people of high school age are now enrolled.

Although the number of R.O.T.C. schools has not been increased in the past five years, R.O.T.C. enrollments have jumped from 168,000 in 1939-40 to 197,000 in 1940-41; 125 civilian colleges and universities register 11,000 enrollees and 82 high schools 59,631 enrollees.

SCIENCES. See the article on each branch of science; articles on government agencies, as NATIONAL INVENTORS COUNCIL; scientific groups under SOCIETIES. For the NATIONAL ACADEMY OF SCIENCES and the NATIONAL SCIENCE FUND see under ACADEMY OF SCIENCES.

SCIENTIFIC RESEARCH AND DEVELOPMENT, Office of. For the purpose of assuring adequate provision for research on scientific and medical problems relating to the national defense, the President established, through an Executive Order dated June 28, 1941, within the Office for Emergency Management of the Executive Office of the President, the Office of Scientific Research and Development. Dr. Vannevar Bush, President of the Carnegie Institution of Washington, was appointed the first Director of this new Office. The present headquarters are located at 1530 P Street, N.W., Washington, D.C.

The Office of Scientific Research and Development comprises within its organization an Advisory Council of which the Director is Chairman, the National Defense Research Committee of which Dr. James B. Conant, President of Harvard University, is Chairman, and the Committee on Medical Research of which Dr. A. N. Richards of the University of Pennsylvania is Chairman.

Members of the Advisory Council, the National Defense Research Committee, Committee on Medical Research and members of major committees and sub-committees appointed by the Director serve in such capacities without governmental compensation, their services being made available as a contribution to the defense research program.

The Office of Scientific Research and Development, broadly speaking, is intended as a coordinating agency and it is expected that the National Defense Research Committee and the Committee on Medical Research will be the principal groups through which it operates in carrying out the

duties with which it has been charged. In performance of its functions, the new Office is authorized to utilize the laboratories, equipment and services of governmental agencies and institutions to the extent that such facilities are available for its purposes. The Director is also empowered to contract with and transfer funds to existing governmental agencies and institutions and to enter into contracts and agreements with individuals, educational and scientific institutions, industrial organizations and other agencies for studies, experimental investigations, and reports. It is expected that necessary activities will be carried out so far as possible through existing organizations and to this end numerous contracts have been entered into with institutions of these several classes. These contracts are intended to cover actual out-of-pocket expenses, together with a reasonable allowance of overhead, with the expectation that the contractor will neither gain nor lose through the undertaking.

Although the Office of Scientific Research and Development is charged with initiation and support of scientific research on the mechanisms and devices of warfare, this function should not be confused with that of the National Inventors Council, Department of Commerce, which is the agency established to receive and review inventions and suggestions that might prove valuable to the national defense.

SECRET SERVICE, U.S. The U.S. Secret Service, a division of the Treasury Department, has as its chief duties the protection of the President of the United States, members of his family, and the President-elect; the policing of the White House and its grounds; the suppression of the counterfeiting and alteration of all Government obligations, and the protection of Treasury buildings, money and securities.

In its "Know Your Money" program of crime prevention through education, inaugurated by Chief Frank J. Wilson in 1940, the Secret Service has proven that the crime of counterfeiting can be prevented by teaching Americans to know the difference between good and counterfeit money. For the fiscal year ended June 30, 1941, victims of the counterfeiter lost only \$91,000, a decrease of 88 per cent from the 1936 average. Beginning with the 1941 fall semester, the Secret Service succeeded in introducing into junior and senior high schools in all parts of the country its 32-page "Know Your Money" booklet, to be used by the schools in their regular curricula.

In 1941 the Secret Service made a total of 2,949 arrests. Offenders included makers or passers of counterfeit bills, makers or passers of counterfeit coins, makers or passers of altered currency, forgers of Government checks, violators of the Gold Reserve Act, persons who counterfeited or altered stamps, violators of the Federal Farm Loan Act, persons making false claims against the Government, and others who committed miscellaneous offenses.

Secret Service Agents received or captured counterfeit and altered notes in the amount of \$109,411, a decrease of \$127,923, or 53.9 per cent as compared with 1940. A total of 18,225 criminal, and 4,731 non-criminal cases were referred to the

Secret Service for investigation during the fiscal year 1941. In cases brought to trial there were 2,572 convictions and 76 acquittals. The percentage of convictions totalled 97.1 per cent, which was exactly the same percentage as for the fiscal year 1940. Fines in criminal cases totalled \$102,420, and imprisonments totalled 2,719 years, 3 months, 23 days and 10 hours. Additional sentences totalling 2,901 years, 6 months, 26 days, were suspended or probated.

The involvement of the United States in war is not expected to cancel the long-range educational program of the Secret Service. However, the war will bring about numerous new and vital assignments the completion of which will make it necessary to lessen the intensity of the crime-prevention effort

SEISMOLOGY. The progress of seismology is affected by international events, and it is not certain that the latest news from Europe regarding any branch of scientific work correctly represents the actual situation, however, reports are being received in the United States from many countries, belligerent, occupied, and neutral. Despite these reports it is difficult to appraise just what has happened to the various seismological stations. In contrast to the lack of information about the actual work being done by seismological stations in other parts of the world is the steady progress which is being made in the United States. The number of papers on the subject published during the year compares favorably with that for any previous year. To meet the apparent demand for a simple low-priced seismograph, the Sprengnether vertical seismograph was completed and tested near the beginning of the year with satisfactory results. This instrument should provide amateur seismologists with a cheap apparatus for carrying on their interests in seismology. Tests showed that this instrument will not only produce good records of local earthquakes, but also will react to the shorter periods in the beginning of distant earthquakes.

LaRocque has made a study of the behavior of water in wells during earthquakes, for his investigation he used records from 24 wells in California which had water-level recorders. He found that two of these wells recorded the great Turkish earthquake of December, 1939, which was over 7,000 miles distant. For earthquakes occurring in California all of the wells usually record the shock. In the case of the Long Beach earthquake of 1933 he found that it was easy to plot lines of equal water-level surge in the wells; the surge was just over 10 feet in wells 15 miles northeast of the epicenter. These lines of equal water-level surge do not follow the isoseismal lines as one might at first think. It appears that the amount of surge in wells may be controlled to a considerable degree by the thickness, perviousness, and elasticity of the water-bearing zones in the soil and also by the location of beds impervious to water. Other curious features about the surge of water in wells caused by earthquakes are that some wells are unaffected while nearby ones will record a surge, and that remote wells may record a surge which wells close to the epicenter do not show. Thus in the El Centro, Calif., earth-

quake of 1940 twelve wells in California failed to record any surge, while ten wells of the fourteen in Florida which were equipped with water-level recorders recorded the surge. A possible explanation of this is that the wells in Florida are located in limestone which is quite uniform and that earthquake waves would be transmitted more uniformly through this rock than through the diverse and complexly faulted consolidated rocks and the discontinuous bodies of unconsolidated rocks in California.

There were no earthquakes of outstanding severity during 1941. There were, of course, the usual number of quakes and some did damage. (For an estimate on the usual number of earthquakes each year, see the 1940 YEAR BOOK, EARTHQUAKES.)

An earthquake occurred in Cyprus on January 20, it was reported that many buildings collapsed or were damaged. The next one to cause appreciable loss was on March 1 when at about sunrise a severe quake shook many towns and villages in northern Greece. At Larissa, in Thessaly, houses were destroyed, telephone and telegraphs and other buildings were damaged, and some streets were blocked by debris. Extensive damage was caused at Ellassona and the epicenter may have been near this place. The shock was also felt at Volo and Lamia, Kanditsa, and Trikkala. In the whole district there may have been as many as 15,000 people made homeless; although this is a large list, only one person was reported killed. The war hindered the collection of accurate news as to the exact damage

Perhaps the most damaging quake of the year occurred in Mexico on April 15. It took place about noon local time; more exactly, 19 hours 10 minutes G.M.T., and the epicenter was 18.8 degrees north latitude and 103.0 degrees west longitude. The states most affected by this earthquake were Aguascalientes, Colima, Guanajuato, Jalisco, Mexico, Michoacan, Puebla, and Tlaxcala, and the isoseismal lines were elongated in an east to west direction. The towns most affected were Guadalajara, Manzanillo, Mexico City, and Colima. At the last named place, a town with a population of 20,000, the first shock caused the dam guarding the water supply to collapse, disrupted power lines, and caused half of the buildings in the town to fall. The cathedral, built after the earthquake of 1932, was destroyed, and during the night forest fires blazed round the town due to the scattering of charcoal kilns by the earthquake. A nearby volcano which erupted at this time also helped to spread forest fires. In addition to the property damage it was reported that 36 people lost their lives in Colima. In Mexico City, towers and signs swayed, church bells tinkled gently, windows rattled, and pavements cracked. The city's tallest skyscraper, a 17-story building at the corner of the Paseo de la Reforma and the Avenida del Ejido, was shaken and a five-story section of glass and facing stone crumbled. Fires broke out, and one destroyed the El Monte lumber yard after firemen had fought the blaze for 6 hours. No one was killed in Mexico City, although property damage totalled \$800,000. The total damage throughout Mexico was about double this amount, and 84 people were killed.

An earthquake of considerable intensity took place on May 6 in northern Manchoukuo. The epicenter was near Suihwa, 40 miles northeast of Harbin where 33 were killed and several were injured and more were killed in nearby towns. A severe earthquake just before noon, Greenwich time, on June 26 had its epicenter near the Nicobar Islands in the Bay of Bengal, northwest of Sumatra.

This earthquake is not notable for the amount of damage done, for not all of these islands are inhabited, but rather for the large amplitudes which it caused on the seismographs of the world.

During the night of July 16-17 a strong earthquake shook the northern part of the Nagano Prefecture, some 140 miles from Tokio, in Japan. Some 30 houses were destroyed and railway service was interrupted. An earthquake with its epicenter near Agri, 70 miles east of Erzurum in Turkey, was reported on September 12; the death toll was about 500. A severe quake occurred in Quetta and the surrounding country in Baluchistan (India) shortly after 8 o'clock, local time, on September 29. This shock was also felt, though less distinctly, at Sibi, Mach, and Chanan, all in Baluchistan. The quake lasted for about 35 seconds and was accompanied by heavy rumbling. Telephone and telegraph communications were temporarily dislocated, but no serious damage or casualties were reported. This lack of damage was probably due to the thorough rebuilding of the new city after the calamitous earthquake of 1935.

In December an earthquake was reported in Formosa, but the war prevented the report of its precise intensity or the exact extent of the damage.

SELECTIVE SERVICE SYSTEM. Section 5 (b) of the National Defense Act of 1920 reads in part: "The duties of the War Department General Staff shall be to prepare plans for National Defense and use of the military forces for that purpose, both separately and in conjunction with the naval forces, and for the mobilization of the manhood of the Nation and its material resources in an emergency . . ."

Under this authority, officers of the War and Navy Departments joined in the creation of the Joint Army and Navy Selective Service Committee in 1926 and began preparation for mobilization of the nation's manpower in crises. On Sept. 16, 1940, the President signed the Selective Training and Service Act of 1940, designed to put into effect the plan for Selective Service as adopted by the Congress.

The Act originally called for the annual training of not more than 900,000 men at any one time in the land and naval forces of the United States, the classification of millions of others on the basis of their availability and general qualifications for use in military and civilian endeavors in times of emergency, and the development of a sizable reserve composed of men trained in the various branches of the armed forces. Subsequent legislation, approved on Aug. 18, 1941, eliminated the 900,000-man restriction, however.

Also, as the act provides that no man who has sincere scruples against bearing arms shall be required to serve in the combatant forces, the Selective Service System has worked with other Federal agencies and interested organizations in devising a system whereby conscientious objectors may serve the nation. Not only has provision been made for use in noncombatant units, such as the Army Medical Corps, of those men who, while opposed to bearing arms, are willing to assist combatant units, but a program for the employment of those who object to any service whatever with the Military Establishment is also being carried out. Through the cooperation of religious organizations, the Department of Agriculture, the Department of the Interior, and the War Department, the latter group of objectors is being sent to camps where, under

civilian direction, they are engaged in soil conservation, forestry projects, and similar public work.

The men who serve in work camps are not eligible, however, for reinstatement in former jobs or placement in new positions as are the men who serve in the armed forces. Placement of the latter group is a function of the Selective Service System and one upon which it is working through its re-employment division.

When the President signed the Selective Training and Service Act, he issued a proclamation fixing Oct. 16, 1940 as the first day of registration for all male citizens and all male aliens between 21 and 36 years of age who were residing in the United States. On the first registration day approximately 16,400,000 men registered for service. Registrations were held in Hawaii on October 26, Puerto Rico on November 20, and Alaska on January 22.

Following the registration of October 16, a national lottery was held in Washington to determine the order in which prospective trainees would be classified on the basis of their availability for military service. The War Department also announced its schedule for calling the new civilian soldiers and the first group was inducted during November of 1940.

Although the original schedule called for the induction of 800,000 men by July 1, 1941, an unexpected number of regular enlistments in the armed forces permitted a reduction so that only approximately 650,000 men were called by July 1. By Jan. 1, 1942, approximately 1,000,000 men were inducted into the armed forces through the process of the Selective Training and Service Act.

The Selective Training and Service Act authorizes the organization of a National Headquarters of the Selective Service System in charge of a Director of Selective Service. This executive may be a civilian or a member of the Military Establishment. The Selective Service System is a separate civilian component of the Government and is not under the jurisdiction of the War, Navy, or other departments; it is a part of the executive branch of the Government and reports directly to the President. As the entire program of Selective Service calls for a decentralization of its operations, National Headquarters serves primarily as a coordinating agency for the various headquarters set up for the individual States, Alaska, Hawaii, Puerto Rico, and the District of Columbia. National Headquarters also serves as a liaison agency between the War and Navy Departments and the general public, and when called upon to assist in supplementing the manpower of the armed forces in turn calls upon the individual State headquarters to furnish the men required for training and service.

In furtherance of the decentralization policy, each State Governor is charged with the enforcement of the Selective Service program in his State. He may designate a State Director of Selective Service as the official in charge of his State headquarters. In the majority of instances such assignment has been made to the Adjutant General of the State National Guard. Individual State headquarters coordinate the work of the various appeal boards, medical advisory boards, registrants' advisory boards, local boards, and other Selective Service units and agents under their jurisdiction. The local boards maintain direct contact with the prospective trainees, their families, and employers. Their power is virtually autonomous and their decision as to a registrant's classification is final except when an appeal is noted. On the basis of their study, registrants are classified in one of the following classifications and subclassifications:

Class I.

- Class I-A Available; fit for general military service.
- Class I-B Available; fit only for limited military service
- Class I-C Member of land or naval forces of the United States
- Class I-H Men deferred by reason of age

Class II.

- Class II-A Man necessary in his civilian capacity, the maintenance of which is necessary to the national health, safety, or interest in a sense that it is useful or productive and contributes to the employment or well-being of the community or the Nation
- Class II-B Man necessary in his civilian capacity, the maintenance of which is essential to the national health, safety, or interest in a sense that a serious interruption or delay in such activity is likely to impede the National Defense Program

Class III

- Class III-A Man with dependents

Class IV

- Class IV-A Man who has completed service
- Class IV-B Official deferred by law.
- Class IV-C Nondeclarant alien
- Class IV-D Minister of religion or divinity student.
- Class IV-E Conscientious objector available only for civilian work of national importance
- Class IV-F Physically, mentally, or morally unfit

At the present time only those men who are in Class I-A, those immediately available and fit for general military service, are being inducted into the armed forces. In this connection, it was found that 1,000,000 men out of the first 2,000,000 registrants examined were physically or mentally unfit for general military service. Studies of the rejected cases indicated, however, that 200,000 of them were correctable and on Oct. 10, 1941, President Roosevelt directed the Selective Service System to undertake a rehabilitation program to make these 200,000 men fit for general service. This program was inaugurated shortly thereafter.

On May 26, 1941, acting under authority of the Selective Training and Service Act, the President proclaimed July 1, 1941, as the second day of registration for men eligible for possible military training. This second registration was for young men who became 21 years old following the first registration day on Oct. 16, 1940, and for certain others who would have been eligible for registration had they been in the United States on the first registration day. On July 1, 1941, 752,170 men in the continental United States registered for service. A second national lottery was held on July 17, 1941, and the new registrants were integrated among the lists of former registrants and are classified as their order numbers are reached.

All members of local boards, appeal boards, medical advisory boards, registrants' advisory boards, and local board physicians serve without pay.

Since enactment of the Selective Training and Service Act, which expires May 15, 1945, Congress has made certain important changes in its provisions. Although the original act provided for the training and service for men between the ages of 21 and 36, an amendment was approved on Aug. 16, 1941, reducing the age limit. This amendment reads in part: "There shall be deferred from training and service, under this act, in the land and naval forces of the United States until Congress shall declare otherwise, the men who, on the first day of July, 1941, or on the first day of July of any subsequent year (1) are liable for such training and service, (2) have not been inducted into the land or naval forces for such training and service, and (3) have attained the twenty-eighth anniversary of the day of their birth." Volunteers under this age limit may be inducted.

The original act provided for a peacetime training period of not more than 12 months but, by an

amendment approved Aug. 18, 1941, Congress extended the period of service to not more than 30 months in time of peace. This same legislation also provided that selectees should receive the sum of \$10 for each month of training and service in excess of 12 in addition to the amounts otherwise payable to them.

With the entry of the United States into War, important changes were made by Congress in the Selective Service Act in December, 1941. Faced with the necessity of recruiting an Army for war time service rather than one for peacetime training, Congress enacted legislation requiring that registration of all eligible men between the ages of 18 and 64, inclusive, be accomplished. This same legislation provides, however, that only those men who are between the ages of 20 and 44, inclusive, are liable for combat service in the armed forces of the United States.

To register the additional manpower, President Roosevelt first proclaimed Feb. 16, 1942, as the third registration day in the United States, paving the way for the enrollment of approximately 9,000,000 men in addition to those previously registered. At the time of the proclamation for the third registration, the President withheld registration dates for the enrollment of the men in the groups outside the military age limit.

Another important legislative change made by the Congress in December was the removal of the restriction in the original Selective Service Act of 1940 which precluded the use of drafted selectees outside of the Western Hemisphere or the territories and possessions of the United States, including the Philippine Islands.

Although the entry into war made it apparent that the armies of the United States would be greatly increased and that the recruitment schedule of the Selective Service System would be stepped up correspondingly, the War Department, soon after the declaration of hostilities, banned the issuance of information which would indicate to the enemy the size of American armies of the future.

Brig. Gen. Lewis B. Hershey was appointed director of Selective Service by President Roosevelt on July 31, 1941, to succeed Clarence A. Dykstra, president of the University of Wisconsin, who resigned Apr. 1, 1941, after a six-months tenure of office. General Hershey has been associated with the manpower recruitment program since 1936, when he was appointed executive officer of the Joint Army and Navy Selective Service Committee.

LEWIS B. HERSHEY.

SENATE, U.S. A list of U.S. Senators as of Jan. 3, 1941, appears on page 674 of the YEAR BOOK for 1940. Since there were no elections to the Senate in 1941, there were only six changes in membership during the year. Three were caused by the deaths of Sheppard of Texas, Harrison of Mississippi, and Adams of Colorado (see *NECROLOGY*) and three by resignations—Neely of West Virginia, Miller of Arkansas, and Byrnes of South Carolina. The new Senators, when the second session of the 77th Congress convened in January, 1942, were: for West Virginia, Joseph Rosier; Arkansas, Lloyd Spencer; Texas, W. Lee O'Daniel; Mississippi, Wall Doxey; South Carolina, Burnet R. Maybank. The seat of Senator Adams of Colorado remained vacant.

Chairmen of some of the important standing committees of the Senate were: Appropriations, Carter Glass, Va.; Banking and Currency, Robert

F. Wagner, N.Y.; Education and Labor, Elbert D. Thomas, Utah; Finance, Walter F. George, Ga.; Foreign Relations, Tom Connally, Texas; Military Affairs, Robert R. Reynolds, N.C.; Naval Affairs, David I. Walsh, Mass.; Rules, Harry Flood Byrd, Va.

SEWERAGE AND SEWAGE TREATMENT. The vast and ever increasing progress of national defense requires the construction of scores of new sewerage systems for training camps, housing projects and plants for the production of aircraft, armament, and munitions. Existing sanitary facilities at army camps and forts require enlargement. Cities in and near which defense industries are located must enlarge their sewerage systems by extensions into newly built-up areas and reinforcement of trunk sewers. All this means the construction of new or enlargement of old sewage treatment works in line with the intensified campaign against discharging sewage into streams, lakes, or tidal waters without whatever degree of treatment may be required to meet local conditions. Vast quantities of nuisance-producing trade wastes create special problems of disposal, whether tributary to municipal sewers or requiring separate handling. To meet these many and various problems a vast civil army of trained engineers and chemists are being pressed into service to design and operate extensive works while a much larger body of civilians is engaged in construction.

Early in the year the War Department engaged two leading firms of consulting engineers to formulate principles to guide sewage disposal at camps and cantonments. The recommendations covered assumed quantities of sewage per capita, strength of sewage, flow-measuring devices, grit chambers, bar screens, primary settling tanks, trickling filters, final settling tanks, sludge digestion tanks, and drying beds. Which process or combination of processes should be used at any location would depend on the volume, character, and use of the water into which the sewage was to be discharged, probable degree of permanence of the project, and adaptability to speed in both design and construction. Disinfection of the final effluent by chlorination was advised. ("Sewage Treatment for Army Camps," *Engineering News-Record*, March 27, 1941.) At Camp Crowder Cantonment near Neosho, Mo., 410 engineers and 20,000 construction men were engaged.

New York City is continuing its extensive program of constructing treatment works to serve various districts of its large area. At the immense activated-sludge plant on Wards Island, the gases arising from the tanks in which the sludge is stored before shipment are deodorized by passing through activated-carbon filters and by the application of ozone—believed to be the only plant where this method is used. A small plant for Greenport, Long Island, treats sewage in Imhoff tanks. The tank sludge is dried in glass-covered beds. To protect oyster beds this tank effluent is disinfected by chlorine before its discharge into Peconic Bay. The Atlantic City Sewerage Company in New Jersey also chlorinates sewage to protect shellfish. The Chicago Sanitary District has built works to treat

or partially treat practically all of the sewage of Chicago and vicinity, but is unable to complete all of the plants owing, first, to its financial situation and later to the National Defense Program and inability to obtain priorities. The combined sewage flow averages over a billion gallons a day. The Sanitary District has been denied its petition to the U.S. Supreme Court for a review of the decision requiring it to pay royalties for its use of the activated-sludge process before the patent expired in 1935, but at the close of the year no steps had been taken towards an accounting. Large sewage disposal projects at Philadelphia, Penn., Louisville, Ky., Los Angeles, Calif., and Toronto, Canada, are still pending, due to financing problems or war conditions. A comprehensive plan for the disposal of the sewage of Cincinnati, Ohio, includes ultimate construction of four treatment works with a combined daily capacity of 138 million gallons. Late in the year a board of consulting engineers recommended that the East Bay Municipal Utilities District should build sewage disposal works for Oakland and five other cities.

A notable feature of sewage treatment progress is the increasing utilization of gas from sludge digestion tanks for power. ("Gas Engines Develop 35,000 Horse-power" at 115 sewage treatment works. *Year Book*, American Public Works Association, 1941; abstracted in *Sewage Works Engineering*, 1941; New York.)

Charging for the use of sewers, to meet at least a part of the cost of that service instead of adding it to the heavy burden of general taxation, is practiced by at least 170 American cities, including Buffalo, Detroit, Minneapolis, and Seattle. (*Year Book of the City Managers' Association*, 1941, Chicago.)

SHIPBUILDING. More merchant ships were worked on in the United States during the past year than in any previous year. Although reports on foreign tonnage are not available, yards in England, Scotland, northern Ireland, and Europe were feverishly active in the building of ships to replace those sunk by submarines and aircraft.

In the United States, besides the long range program started by the Maritime Commission in 1937 for building standard types of cargo and cargo-passenger vessels to meet the requirements of United States foreign trade, the Commission announced in January, 1941, its emergency construction program for two hundred 10,000-ton deadweight cargo ships.

Even while the details of the Emergency Program were being worked out, the demand for a further expansion of shipbuilding under the Lend-Lease Act was being considered by the Commission. On April 14, the President allocated Lend-Lease funds to the Commission, which promptly entered into negotiations with shipyards for the building of 227 additional cargo vessels and tankers. Because of increased sinkings of British and Allied vessels, on August 25, the President approved another program authorizing the construction of 541 more cargo vessels and tankers, and 25 seagoing tugs.

VIEW OF THE KEEL OF THE S.S. PATRICK HENRY DURING CONSTRUCTION IN THE BALTIMORE YARD

Programs are somewhat simpler in design than those of the Long Range Program (see 1940 YEAR BOOK), having in view the building of serviceable cargo vessels in the shortest possible time. The Liberty ships of the Lend-Lease and Emergency Programs have an overall length of 441 ft. 6 ins., beam 57 ft., depth 37 ft. 4 ins., total displacement 14,100 tons, and will carry a general cargo of 9,146 tons. They are of the single screw, full scantling type, with raked stem and cruiser stern, having seven main transverse bulkheads providing five cargo holds. The engine and boilers are located amidships in a single compartment. Speed 11 knots, as against 15½ knots of the Maritime Commission C-2 vessels of the Long Range Program. Besides cargo ships, many large tankers were built, several of which were taken over by the Navy Department. Some of the cargo-passenger vessels were requisitioned by the Army and Navy for troop ships and other purposes.

Shipyards on Atlantic and Pacific coasts, Gulf of Mexico, Great Lakes, and on the Mississippi and other inland waters were very busy. On the Great Lakes, cargo vessels, mine sweepers, small tankers, and other craft that on completion could pass through canals into the St. Lawrence river were contracted for. On inland waters many steel welded barges and tow boats were built. Canada carried out a large shipbuilding program estimated at over \$130,000,000. According to the American Bureau of Shipping records on October 1, 1,011 vessels aggregating 5,794,090 gross tons were under construction in United States shipyards for classification with the American Bureau. Included were 765 ocean going vessels of 5,638,920 tons; five ships of 55,000 tons for Great Lakes service; 239 of 99,450 tons for miscellaneous service; one composite ship of 40 tons, and one wooden vessel of 180 tons.

Several of the shipyards were plagued with strikes, and construction was delayed by disputes between the A.F.L. and the C.I.O. The worst strike of the year was at the Federal Shipbuilding Company, Kearny, N. J., which was finally taken over by the Navy Department. There were strikes on the Pacific coast among welders which seriously retarded work in many yards.

Hull Construction. Vessels of the Long Range Program were largely of welded construction, as were those of the Lend-Lease and Emergency Programs, but the latter were designed primarily for speed in building yet with ample strength to meet the requirements of the American Bureau of Shipping. To speed up construction the hull of a vessel was divided into sections, the plates and shapes being assembled on the ground and then hoisted into position on the building way. Both automatic and hand welding were employed, with the result that fabricating of plates and shapes progressed rapidly.

The growth of welded ships in the United States is shown in the American Bureau of Shipping report of October 1. At that date 298 ships under 300 feet long were to be all welded except one small survey vessel. Of 711 large ocean-going vessels, 207 were to be completely welded, and in the remainder welding was to be extensively employed. In November, largely for emergency purposes, contracts were awarded for several reinforced concrete barges.

The time elapsing from laying the keel to launching has been noticeably reduced by standardization and improved methods of construction. At one time, at least a year was required to build the hull to the launching stage, but several United

States yards now take only a few months. This speed in building the hull, plus the standardizing of the machinery, makes possible the delivery of a completed vessel ready for sea, in a year or less.

Sept. 27, 1941, or Liberty Flag Day, was a notable one in United States shipbuilding activities. Fourteen merchant ships were launched from various yards on that one day. Over 130 vessels were completed in 1941 and this number will be exceeded in 1942. Additional ways have been added at many shipyards, expected to be capable of producing approximately 6,500,000 deadweight tons of ships per annum.

Marine Engineering. As improved means were developed in hull construction, so improvements have been made in the designing and building of boilers, turbines, Diesel and steam engines, and their auxiliaries. Fire-tube boilers of the Scotch type were largely replaced in modern cargo, passenger vessels, and in tankers by water-tube oil-fired boiler, generating high-pressure steam which was further superheated. Such steam was fed to high-speed turbines that through reduction-gears drove the propeller shaft. High-pressure water-tube boilers and geared turbine units were installed on a large number of Maritime Commission ships, which have proved in service to have low fuel consumption and high efficiency.

An exceptional machinery installation of the past year was made in the *Examiner* (Maritime Commission C-3E design) of the American Export Lines. In this ship, the machinery was designed for 1,200 lb., whereas sisterships operate at 425 lb. per sq. in. The high pressure of 1,200 lb. required specially designed boilers and auxiliaries, as well as a geared turbine unit that was wider and had three cylinders instead of the usual two. A comparison in service of the *Examiner* with her sisterships will be of interest and will show if such pressures can be successfully used and if they have advantages over lower pressures for cargo ships.

On certain routes and conditions Diesel engines are an ideal form of power. During 1941 both direct drive and gear drive Diesels have been installed in ships. Designs have been refined, improved efficiency and reliability secured; in fact the modern Diesels are a thoroughly reliable unit for marine service. Besides cargo vessels and tankers, many tow boats for harbor and river service are driven by Diesels. One of the largest direct drive Diesels was the *Esso Williamsburg*, 521 ft. long between perpendiculars, 70 ft. beam, 40 ft. deep, cargo capacity 152,200 barrels of oil, having a 7,500 shaft horse-power Diesel, giving a speed of 15½ knots.

Steam engines of the three cylinder triple expansion type were installed in many of the emergency ships built for Great Britain, and in the United States "Liberty" ships. These engines were of improved design to those of the first World War. Besides triple expansion, an engine in which steam is completely expanded in each cylinder and all the cylinders are of the same size, known as the Unafflow, was installed on bay and inland water vessels. Notable installations are in the carferry *City of Midland* operated by the Pere Marquette Railway on the Great Lakes; and in the passenger and vehicular ferry *Pocahontas*, of the Virginia Ferry Co. running between Cape Charles and Little Creek, Va.

Turbine-electric machinery has been installed in several large tankers, and Diesel-electric in tugs and ferry boats. Electric driven vessels are easy to maneuver, particularly desirable in harbor op-

erating. See COAST GUARD, U.S.; NATIONAL INCOME; NAVAL PROGRESS.

CHAS. H. HUGHES.

SHIPPING. The war in Europe has continued to disrupt the service of all lines previously operating vessels from Europe to other continents, and has caused many changes in the service from the United States to foreign ports. The pre-war routes to England via Ireland, and to Plymouth, Southampton, and London, also to Scotland, are no longer safe because of German submarines and aircraft. Hence, other safer, though still dangerous routes, as from northern United States and Canadian ports to Iceland, and thence to Scotland, Northern Ireland, and England, were used for carrying supplies during the year.

Besides operating vessels to Iceland, Portugal, Spain, and some Allied ports in Europe, the United States continued to send ships to Australia, Asia, Africa, and South America. The runs from ports on the Pacific coast to Vladivostok, Siberia, developed some risks, because of uncertainty as to Japanese action. Passenger vessels made idle by war conditions were frequently run on pleasure cruises to the West Indies, and to South America; some were taken over by the Army and Navy. As a war measure, the publication of departure dates of vessels to many foreign countries was discontinued.

On Jan. 1, 1941, there were 141 ships totalling 832,673 gross tons in service to both coasts of South America, Central America, Mexico, and the West Indies. On September 1 in the same services there were 209 ships of 1,105,284 gross tons.

The number and tonnage of documented United States sea-going vessels over 2,000 gross tons has steadily declined according to the Bulletin of the American Bureau of Shipping of July 1, 1941, due to sale and transfer to foreign flags, and to the Army and Navy. At that date, merchant vessels of 2,000 gross tons and over, excluding those on the Great Lakes, included 1,136 passenger, cargo vessels, and tankers, with a total gross tonnage of 6,815,304.

War Losses. As to the number of Allied vessels sunk by the Axis powers, and the number of Axis vessels sunk by the Allies, very conflicting reports were published. A report from London early in October stated that sinkings in July, August, and September were about one third of those in the preceding three months, April, May, and June, a reduction to about 472,000 tons from the previous three months total of about 1,416,000 tons. With the assistance of the U.S. Navy, it is expected that the sinkings of Allied vessels will be still further reduced. It was reported that Italy lost several large troop ships in the Mediterranean Sea, and the Germans suffered heavy losses in the Baltic and Black Seas.

Maritime Commission. The Maritime Commission's defense program is concerned with the allocation of available vessels in such a way as to fill the defense needs of the United States and to aid countries fighting for democracy. To carry this out, the Commission set up a Division of Emergency Shipping. The chairman of the Maritime Commission stated before a House of Representatives committee on October 8 that 320 cargo ships would be required to transport materials ordered under the Lend-Lease Program to Britain, Red Sea ports, China, and the Near East—135 vessels for the Red Sea and Near East service, and 185 for the North Atlantic.

Throughout the year many acts of Germany

seriously affected United States shipping. These acts reached a climax late in September, and forced the President to state that German submarines operating on the route to Iceland would be eliminated, and hinted if sinkings continued then all United States vessels would be armed. As unwarranted attacking and sinking of United States and neutral vessels continued, Congress in November amended the Neutrality Act to permit the arming of merchant vessels. The arming and supplying of gun crews was done by the Navy Department. The first armed ships carried supplies over routes to Russia and British Isles, followed by others to the Red Sea and North Africa. With the amending of the Neutrality Act, about 45 American owned ships registered under the Panamanian flag were returned to American registry.

Freight and passenger traffic between United States and South America decidedly increased because of the war in Europe; many of the new Maritime Commission ships are in this service. The Maritime Commission approved an agreement whereby the Mississippi Shipping Co. and the Grace Line will cooperate in the booking and transportation of passengers on tours around South America. The Commission also approved a modification of an agreement of the West Coast South America-North Pacific Coast conference, to restrict voting on conference matters to members maintaining a regular service.

Ship Warrants Act. The Ship Warrants Act, under which the Maritime Commission fixes priorities in the interest of national defense, went into effect on September 25, and applied to all United States vessels (except inland water), and foreign vessels of 1,000 gross tons or over operating from United States ports.

Under the terms of the Act, the Maritime Commission can grant preference in the use of shore facilities to ships that cooperate in the national defense by following approved trade routes and by carrying essential cargoes. The Act protects the public by controlling transportation charges for carrying defense materials and freight intended for public consumption. Carriers receiving and holding warrants must not charge more than prescribed rates. Two classes of warrants were issued—Class A-1, given to vessels of more than 1,000 gross tons employed in the transportation of freight vital to national defense, and Class A-2, for vessels of more than 1,000 gross tons employed in the transportation of cargoes deemed by the Maritime Commission to be essential to the economic welfare of the United States. Applicants for warrants for vessels engaged in the business of servicing larger vessels must agree that before using a repair yard or dry dock capable of handling ships of 1,000 gross tons and over, they will clear requests for such dry docking through the Coordinator of Ship Repair and Conversion, New York City.

Inland Water Carriers. On the control of inland water carriers by the Interstate Commerce Commission, sufficient time has not elapsed to report on the operation of the Transportation Act of 1940, which includes Part III of the amended Interstate Commerce Act. Carrier representatives and members of the Commission held several conferences on uniform accounting and statistical requirements. The Transportation Act gives the Commission authority to prescribe classification of accounts to be adopted by water carriers subject to its jurisdiction, depreciation regulations, and the forms of the periodic reports to be made by carriers to the Commission.

Shipping on the Great Lakes was brisk. From

available reports, ore shipments for the 1941 season will be over 80,000,000 tons, which is higher than that of the previous year. Shipments of coal to upper Lake and Canadian ports were less, due to strikes and refusal of some ore carrying vessels to load coal on return trips; nevertheless, during the latter part of the season, coal shipments were heavy. Rates for grain loadings were advanced in October. Ore, bituminous coal, and stone (used in blast furnaces) shipped in 1941 exceeded 150,000,000 tons, which was more than the combined movement of all freights in any other year. Shipments in 1941 of grain, ore, steel, oil, and other commodities totalled about 165,000,000 tons.

Labor. Longshoremen and other unions called strikes on shipping companies, and besides such strikes there were many jurisdictional disputes between the A.F.L. and the C.I.O. One of the labor strikes against the Alcoa Steamship Co. was so serious that it came to the attention of the President, who ordered the vessels of this company to be kept running; otherwise they would be operated by the Government.

SHOE INDUSTRY. World events had a disturbing effect on international trade in shoes in 1941 but it did not prevent a world production of shoes of over a billion pairs. Production of shoes, made wholly or partly of leather, exceeded half a billion pairs in North America, with the United States manufacturing 500 million pairs, Canada 30 million pairs and with expanding activity in Mexican and Central American factories. Shoe manufacturers in South America are supplying an increasing share of that continent's demand. Factories have been modernized in recent years and large quantities of manufacturing equipment imported. They have large supplies of raw materials and are making progress in low priced shoes.

In Europe, the shoe industry is hampered by many complicated problems developed as a result of the war, and manufacturers have found it impossible to maintain normal levels of production. Leather shoe production for military usage has increased at the expense of civilian demands. Approximately eighty per cent of shoe production in Africa is accounted for by factories in the Union of South Africa and Egypt. Reports indicate that production in these two countries has expanded during the current year.

In the United States 16,000,000 pairs of shoes were manufactured for the Army. Using top grades of leather, this caused some shortages in the leather market, but it had little disturbing effect on the manufacturing industry (the largest maker of army shoes finds them only five per cent of his total output). Increases in costs of material, labor, and taxes have contributed to a gradual but steady rise in the

retail prices of shoes. Some prices have risen ten to twenty per cent. Other lines, especially women's, will probably see their first increases this spring. The price of U.S. Army shoes, a good barometer, has risen from around \$2.50 in August, 1940, to \$3.65 in November, 1941.

World wide growth in the manufacture of rubber footwear fell off owing to the restrictions and in cases the cutting off of supplies of rubber.

JOHN F. W. ANDERSON.

SHOOTING. Rifle and Pistol. With defense activities outlawing the heavy caliber rifle, no less than 1,558 small-bore rifle and pistol shooters tramped off to Camp Perry, Ohio, to compete in the 1941 national tournament. Ransford Triggs, Madison, N.J., led in the small-bore dispute, and Mrs. J. W. Cole of Minneapolis in the N.R.A. Women's championship. In the pistol matches, Harry Reeves of the Detroit Police Department was "boss" man in the all-around aggregate, grand aggregate, center-fire aggregate, .45 caliber aggregate, and in eight of the events from which the aggregates were taken. Mrs. Mildred McCarthy of Allenhurst, N.J., took over the N.R.A. women's pistol title.

Skeet. Dismaying keen competition was the password at the national skeet tournament at Indianapolis C. H. Poulton of San Antonio, Texas, had a right to be proud of his all-gauge crown, for one shooter lost the title when he missed one bird out of 350. The women's title was awarded to Mrs. M. L. Smythe of Aurora, Ohio.

Trapshooting. Shooters at the Great American classic at Vandala, Ohio, saw Walter L. Tulburt of Detroit claim the Grand American prize, and Joe Hiestand of Hillsboro, Ohio, the Class AA championship.

SIAM. See THAILAND.

SIERRA LEONE. A British West African colony and protectorate. Total area, 27,925 square miles, of which the parts administered as colony (Sierra Leone peninsula, the Tasso, Banana, and York islands, and the town of Bonthe on Sherbro island) equaled 256 square miles. Population (1931 census), 1,768,480, including 96,422 in the colony. Freetown, the capital (64,329 inhabitants in 1939), has one of the finest harbors in West Africa.

Production and Trade. Kola nuts, palm oil and kernels, ginger, rice, groundnuts, piassava, cassava, hides, diamonds (600,000 metric carats in 1940), gold (32,676 fine oz. in 1940), iron ore, platinum, and chromite (10,755 metric tons in 1939) were the principal products. Trade (1939): £1,666,890 for imports and £2,207,892 for exports (diamonds, iron ore, palm oil and kernels, gold, chromite, and ginger were the main items). Roads (1940): 998 miles.

Government. Budget estimates: (1941) £887,648 for revenue and £969,456 for expenditure; (1940) £783,342 for revenue and £833,564 for expenditure. Net public debt (Dec. 31, 1939): £1,288,259. The colony and protectorate are administered by a governor, assisted by an executive council. There is a legislative council of 23 members (including the governor as president) which legislates for both the colony and the protectorate.

U.S. PRODUCTION & CONSUMPTION OF LEATHER SHOES IN 1941
(000 Omitted)

	Women's	Men's	Misses' & Children's	Youths' & Boys'	Infants'	All Other	Total
Production	193,500	118,000	48,000	19,000	27,500	79,000	500,000
Consumption (Estimated)	184,000	109,000	45,900	17,600	24,500	63,000	444,000

Governor and Commander-in-Chief, Sir H. C. Stevenson (appointed July, 1941).

History. Sierra Leone contributed to the war effort in many ways, including the use of Freetown harbor as a safe anchorage for ships carrying vital supplies to be assembled into convoys, the refortifying of the port of Freetown, and generous financial contributions to the Imperial government. In answer to a question in the British House of Commons, Mar. 26, 1941, the British Colonial Secretary said that special precautions were necessary in Freetown because it was an important port. He added that he was not aware of any general complaints of the suppression of freedom of speech, freedom of the press, freedom of meeting, or of an unnecessary curfew order, or that there had been established an internment camp to which were committed, among others, natives who have called attention to abuses of the law.

It was announced during May that some 30,000 troops were concentrated at Freetown. The sharp rise in rents in Freetown and other parts of the colony prompted the government to introduce legislation controlling rents on the basis of the rates in force on Aug. 1, 1940.

SILK. See TEXTILES; also, BUSINESS REVIEW; FASHION EVENTS.

SILVER. Total mine production of recoverable silver in the United States and Territories in 1941, according to the preliminary report of the U. S. Bureau of Mines, was 67,052,469 fine ounces valued at \$47,681,756. This was a 7 per cent decrease from the 1940 total of 71,824,746 oz. valued at \$51,075,375. The value was 71.1¢ per fine ounce both years. Idaho mined 25 per cent of the total production; 17 per cent came from Montana; Arizona and Colorado each contributed 11 per cent; Nevada, 9 per cent; California, 3 per cent; New Mexico, 2 per cent; other States, Alaska, and Puerto Rico, 2 per cent.

Silver has been found to increase the durability of many war materials, according to the annual report of Handy and Harman, bullion dealers, who have been engaged in a research program for increasing the industrial uses of silver. Silver and silver alloys at the end of the year were going into battleships, tanks, airplanes, and munitions. Silver has been found to prolong the life of much machinery. Pure silver bearings in airplanes increase speed and resistance to vibration. As a substitute for copper, nickel, aluminum, and tin, silver has released quantities of these scarcer metals for war requirements.

Consumption of silver in the United States and Canada in 1941 is estimated by this firm at 80,000,000 oz., an extraordinary increase of almost 95 per cent over the 1940 consumption figure of 41,000,000 oz. World production of silver in 1941 was roughly estimated at 275,000,000 oz., about the same as in 1940.

Acquisitions of silver by the U. S. government were estimated at 139,900,000 oz., the smallest annual total since the launching of the silver-buying program, and a decrease of 68,200,000 oz. from 1940. The year's acquisitions plus 3,140,100,000 oz. on hand at the beginning of 1941, amounted to Treasury holdings of 3,280,000,000 oz. on Dec. 31, 1941. This figure includes coin in circulation, in banks and the Treasury. United States exports for industrial purposes, January-April, 1941, were reported as being 783,000 oz. to Switzerland; 377,000 to Sweden; 38,000 to Finland; 6,000 to Portugal; 3,500,000 to India.

The market price for silver in New York was 34.75¢ an ounce, January-November, 1941, and 35.1¢ in December.

Western Hemisphere production of silver was estimated by Handy and Harman as follows:

WESTERN HEMISPHERE SILVER PRODUCTION <i>[In millions of fine ounces]</i>		
	1941	1940
United States	70	67
Mexico	79	86 3
Canada	22	25 4
South America	28	30
Central America and the West Indies	4 5	4 5
Total	203 5	213 2

SKATING. Beaten by eight-tenths of a point for North American honors, Eugene Turner of Los Angeles retained his national figure skating laurels in 1941 with an uncanny exhibition of grace and skill. He had lost by that slim mathematical margin to Toronto's Ralph McCreath in the North American—1,575 to 1,575.8. Miss Mary Rose Thacker won the women's North American, with Miss Eleanor O'Meara and McCreath sharing the doubles bauble. In the meet at Boston, wherein Turner took the national crown for the second successive year, Miss Jane Vaughan, University of Pennsylvania co-ed, took women's laurels. And meanwhile the art of skating artistically gained spectators, with the result that Miss Sonja Henie became one of the top box-office attractions of the year and drew 134,000 persons for eight performances in Madison Square Garden in New York. In all, fifty-six nights in the garden were turned over to figure skaters.

In speed skating, Ken Bartholomew of Minneapolis was top performer, taking the crowns in both the North American and national events. He annexed the national title at La Crosse, Wis., and a week later showed the way in the nationals at Schenectady, N. Y., taking both titles away from Leo Friesinger of Chicago, who was second at La Crosse, and third at Schenectady. Miss Carolme Landry, of Fitchburg, Mass., won both women's titles, dethroning Miss Madeline Horn, of Beaver Dam, Wis., in both instances.

SKIING. As skiing enthusiasts reached record proportions in the United States and Canada during the 1940-41 season, so did Torger Tokle, the young Norwegian, keep in step. His matchless skill brought him the distinction of winning twelve of thirteen meets, taking several major championships and setting seven hill records, and clearly earning him the right to be called the No. 1 competitor. Since coming to the United States, three years ago, he has taken thirty-one of thirty-four jumps and achieved seventeen new records.

In the national championships on Olympian Hill in Hyak Bowl, near Seattle, Wash., Tokle soared 288 feet to top his own national record of 273 feet. And also in addition to taking the Eastern and Central crowns, he broke meet marks at Lake Placid, Brattleboro, Bear Mountain, Duluth, and Laconia-Gilford. Toni Matt, Eastern Slope pro, won over the defending champion, Dick Durrance, in the national downhill and combined down-hill-slalom (open division), although Durrance managed to come through in the national open slalom. Alf Engen maintained his four-event title and regained the combined cross-country and jumping

championship. The national cross-country king was George Gustavson of California.

Amateur laurels went to Bill Redlin of the University of Washington, as he captured the downhill, slalom, and combined events at Aspen, Colo. In the women's division, Mrs. Gretchen Fraser of Sun Valley, S.C., won the downhill and combined down-hill-slalom. Barbara Shaw of Mount Mansfield, S.C., took both the open and restricted slalom titles, while Nancy Reynolds of Montclair, N.J., was returned the combined restricted amateur champion.

SLOAN FOUNDATION. See PHILANTHROPY.

SLOVAKIA. A former province of the Czechoslovak republic, proclaimed an independent republic by the provincial parliament on Mar. 14, 1939, and taken under German protection by a treaty signed Mar. 18, 1939. Capital, Bratislava (Lemberg). See CZECHOSLOVAKIA.

Area, Population, etc. Exclusive of territories ceded to Hungary and including areas transferred to the republic by Germany from Poland, Slovakia has an area of approximately 14,706 square miles and a population of 2,691,000 (Dec. 31, 1939 estimate). There were nearly 2,000,000 Slovaks, about 100,000 Germans, 180,000 Jews, 80,000 Hungarians, and 20,000 Ruthenians (Ukrainians). The population of Bratislava, capital and chief city, was 170,668 (estimated) in 1935. Roman Catholicism is the predominant religion.

Agriculture and forestry are chief sources of livelihood. Industry, mining, and commerce are of secondary importance. Production of wheat in 1939 was 321,600 metric tons; rye, 200,800 metric tons. Barley, oats, sugar-beets, and corn are other leading crops. Mineral output for May, 1941, was reported as follows (in metric tons): Iron ore, 83,891; sintered iron ores, 6,018; pyrites, 741; manganese ore, 6,346; antimony ore, 1,277; copper ore, 10,443; gold and silver ores, 8,592; crude oil, 2,717; salt, 315, pig iron produced, 3,763. Railways in 1940 extended 1,580 miles. Construction of new connecting lines between main lines "amputated" through territorial cessions to Hungary was under way in 1940 and 1941. The important Neuhof-Oberstuben line, costing 445,000,000 crowns, was opened to traffic Dec. 19, 1940.

Government. The Slovak People's party, led by Josef Tiso, a Roman Catholic priest, adopted fascism of the Nazi variety as its ruling principle and imposed it upon Slovakia when the province obtained regional autonomy within the Czechoslovak republic in November, 1938 (see 1938 YEAR BOOK, p. 201). Following the declaration of independence and the acceptance of German protection, a new constitution making Slovakia an authoritarian "Christian National Republic" was adopted by the one-party parliament on June 21, 1939. The Constitution provided for a parliament of 80 members elected by the people for five years from a one-party list; a President elected by Parliament; and a National Council of 22 members exercising wide executive and legislative powers through its chairman, acting as Premier.

The National Council is composed of 6 representatives appointed by the President, 10 of the Slovak People's party, and 6 of the corporative civil service, labor, and commerce organizations. The Premier has power to summon or dismiss Parliament at his discretion, veto any of its measures, and with the approval of the National Council legislate by decree without ratification by Parliament. President in 1941, Josef Tiso (elected Oct. 26,

1939); Premier, Bela Tuka. The Constitution recognized the Slovak National party (successor to the Slovak People's party) as the sole legal political party. Minority rights and religious liberty were granted to all Slovak citizens. The former national minority parties were given the status of subdivisions of the Slovak National party.

Under the Slovak-German treaty of Mar. 18, 1939, Slovakia agreed to permit German military occupation of its frontier districts along the Polish border, to "organize its own military forces in close collaboration with the German armed force," and to "conduct its policy in close collaboration with the German Government." A German-Slovak military agreement ratified Aug. 18, 1939, placed the Slovak military forces under German command and authorized German military occupation of the entire country (see YEAR BOOK for 1939, p. 182 f.). On Nov. 24, 1940, Slovakia adhered to the German-Italian-Japanese treaty of alliance. For 1941 developments, see *History*.

History. As described in the YEAR BOOK for 1940, efforts by some members of the Slovak Government to prevent complete German domination of the republic by closer collaboration with the Soviet Union ended unsuccessfully when Slovakia on Nov. 24, 1940, formally adhered to the Tripartite Pact of the Axis powers. As a result of this decision, Slovakia during 1941 fell increasingly under German control.

The extreme anti-Jewish laws demanded in Berlin were placed in effect. In March the 88,951 persons classified as Jews were by decree segregated from "Aryans" and forced to live temporarily in ghettos pending eventual forced emigration. In September the Slovak Government ended its resistance to application of the Nuremberg laws in Slovakia and authorized similar legislation. Jewish-Aryan mixed marriages were prohibited, a 20 per cent tax was imposed on Jewish-owned property and a 40 per cent tax on Jews' bank deposits.

This anti-Jewish legislation facilitated the extension of German economic control. Many Germans took over businesses relinquished by Jews. There was a considerable influx of Germans from Berlin and Western Germany seeking refuge from British air bombings. The acute shortage of raw materials and the severance of Slovakia from some prewar markets, reflected in the closing of many factories, forced the country into closer economic and political dependence upon the Reich. On March 29 the Slovak Government signed an agreement with the great Hermann-Goering steel and iron concern, owned by the German Government, under which the Podbrezova Iron & Steel Works in Slovakia were combined with the Hermann-Goering works. Operations were placed under German management and financial control was exercised jointly by the Hermann-Goering firm and the Slovak Government. The agreement was ratified by the Slovak Parliament June 26.

Closer economic collaboration with the Reich was accompanied by the arrest and imprisonment during February and March of many Communist agents sent from Russia and of Slovaks agitating against German control. With the German attack upon the Soviet Union beginning June 22, Berlin announced June 24 that Slovak troops were aiding Germany in the struggle. On June 30 the Slovak Government admitted that Slovak forces were at the front.

Many Slovaks were strongly opposed to participation in the war against Russia. The heavy casualties reportedly suffered by Slovak troops contributed to the unrest that manifested itself during the

second half of the year. During four weeks of July and August more than 800 persons, most of them supporters of the Czechoslovak Government-in-Exile in London, were reported to have been arrested as "Communists." Many Slovak soldiers, sent home from the Russian front to bring in the harvest, deserted with their rifles to join Czech guerrilla forces in the Tatra Mountains. Ignoring this opposition, the Slovak Government on November 25 renewed its adherence to the Anti-Comintern Pact for five years.

The Supreme Court Tribunal of Slovakia in Bratislava on February 20 imposed long prison terms in absentia upon prominent Slovaks who remained loyal to the Czechoslovak Government-in-Exile in London. Ex-Premier Milan Hodza of Czechoslovakia received 18 years, Dr. Stefan Osusky, former Czechoslovak Minister to Paris, life imprisonment, and two other leading publicists 15 and 11 years, respectively, for giving away military secrets and conspiring against the Slovak State. Their fortunes were confiscated. See CZECHOSLOVAKIA under *History*.

SLUM CLEARANCE. See HOUSING AUTHORITY, U.S.

SMITHSONIAN INSTITUTION. An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his property to the United States of America "to found in Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The purposes of the Institution are carried out by scientific research, exploration, and publication. It also administers the following bureaus which are supported by Congressional appropriations: The United States National Museum, National Collection of Fine Arts, Bureau of American Ethnology, International Exchange Service, National Zoological Park, and Astrophysical Observatory including the Division of Radiation and Organisms. It also administers the Freer Gallery of Art. The new National Gallery of Art was established as a bureau of the Institution but is administered by the Board of Trustees of the Gallery.

The expendable income of the Institution for 1941, consisting of income from investments, income from miscellaneous sources, and gifts for special objects (excluding income from the Freer endowment) was approximately \$250,000. Its endowment funds (exclusive of the Freer endowment) totaled \$2,209,263. The Institution and the government bureaus under its direction published 78 volumes and pamphlets, of which 125,837 copies were distributed to libraries, educational institutions, and individuals. The secretary is Charles C. Abbot, D.Sc.; the assistant secretary, Alexander Wetmore, Ph.D.

SMUGGLING. See CUSTOMS, BUREAU OF; NARCOTIC DRUGS CONTROL.

SOCIALISM. The year 1941, in all belligerent countries, saw further strides in collectivism and state control such as modern total war makes inevitable. Contrary to popular opinion, these steps were not necessarily toward Socialism, unless the word Socialism is to be made synonymous with a totalitarian or militaristic state capitalism. Nowhere was the progress toward state control of economic processes paralleled by similar progress toward democratic controls of the state, or the economic mechanism it set up.

Great Britain where members of the Labor Party continued to fill very important posts in the National Cabinet was not an exception to this generalization. Indeed, that shrewd Prime Minister, Winston Churchill, arranged that one leader of British Labor, Mr. Ernest Bevin, had to enforce wartime restrictions on labor and conscription of workers; and another, Mr. Herbert Morrison, had to enforce the order under which suspected persons could be interned without right of appeal to the writ of habeas corpus. Nevertheless, in Great Britain, partly as a result of the strength of the Labor Party, and partly because of the excellence of the British tradition, civil liberties were surprisingly well preserved; better preserved than in the First World War, though less well preserved than some enthusiasts have assumed.

The Labor Party at an official conference reaffirmed its support of the government. It again expressed its belief in international economic planning and declared that "no peace which does not aim at a Socialist reconstruction and international society can be accepted by the Labor Party as adequate to the sacrifices involved in the defeat of Nazi and fascist aggression." It set up a central committee on reconstruction, with Emanuel Shinwell, M.P. as Chairman and Harold J. Laski as secretary. On the last day of July the Party again refused to be associated in any way with the Communist Party, on the ground that its policy had "never been determined by democratic methods, nor by references to the needs and purposes of the British people."

Still later, in the fall of 1941, leaders of the Party, supported by the great majority of Labor Party members in Parliament, rejected an amendment to the Conscription Act, introduced with the support of a few Labor members, calling for public ownership and control of industry as "the essential method of obtaining complete utilization of the national resources." Ernest Bevin, opposing the amendment both for the Cabinet and for the majority of the Labor Party, declared that property was already at the government's disposal and promised that questions of further requisition would continue to be judged on their merits.

On this record it would appear that the Party took no aggressive action looking toward democratic socialization at home, or the solution of problems of empire, such as the Indian question, or the specific statement of different war aims than those embodied in the Charter of the Atlantic. Perhaps because of these things, the small Independent Labor Party made some progress in public support. At a Parliamentary bye-election it gained 20 per cent of the vote for its Secretary and candidate, Fenner Brockway. The I.L.P. is pushing socialization and advocates a socialist or workers' peace to be won by the peoples of all countries. It says that it opposes not only the national government but also the government's war. To most observers it would appear, however, that the actual position of the I.L.P. on the war could most realistically be described as one of highly critical support.

In Australia, the Parliamentary crisis, due largely to questions of Australian relations to the war, and the strategy of the British Empire, finally resulted in the formation of a Labor Government with John Curtin as Prime Minister. In New Zealand the Labor Government, presided over by Peter Fraser, continued in office and inaugurated a system of national free medical care. It suffered reverses in the municipal elections in May. In Canada the Cooperative Commonwealth Federation showed strength in British Columbia when it returned 14 members

to Parliament out of a total of 48, as against 7 in the previous provincial election.

Outside of the British Commonwealth of Nations, European Socialists were able to function openly through Socialist or Labor Parties only in Eire, Sweden, Switzerland, and Finland. In Denmark a coalition government, headed by the Socialist Premier Stauning, remained in office, but all real power was usurped by the Nazis. In Sweden Per Albin Hansson's Cabinet, supported by the Social Democrats and agrarians, continued in office. It struggled to keep out of war, while retaining as much as possible of independence and freedom of action, and was concerned for defense against possible invasion. As the year drew to a close, Finnish Socialists who were represented in the Cabinet began to bring increasing pressure on the government to find ways of ending the war with Russia, before the country found itself too completely tied to Germany's fate. The Norwegian Labor Government in exile, with headquarters in London, continued to manage the large and important merchant marine. In general, belligerent governments in exile contained Labor and Socialist members, all of whom were extremely active in the struggle against Nazism.

Leon Blum, and other prominent French Socialists, were held in prison during the year on charges of responsibility for plunging France into war. Many Socialists were executed; more were put in concentration camps. Marx Durmoy, former Socialist Minister of the Interior, was assassinated.

In all the countries occupied by the Nazis, Socialists were active in underground movements, and many, caught by the German Secret Police, suffered the fate meted out by that organization. In Germany itself, Dr. Rudolf Hilferding, former Social Democratic Minister of Finance, was found hanged in a prison cell.

In South America, active Socialist Parties are legal in Argentina, Uruguay, and Chile. In Ecuador the position of the Party may be described as semi-legal. In Peru, the Aprista Party, an indigenous South American Party, radical rather than Socialist, remained strong, although nominally suppressed by the dictator. The Party had influence in other Latin American countries.

In Chile where the radical strength proved greatest, the Socialist Party was an uneasy member of the United Front behind President Pedro Aguirre Cerda. Socialist members of the Cabinet resigned early in 1941 in protest against the inclusion of Communists in the Popular Front, but the President refused to accept their resignations. In the March election in which the Socialist Party ran independently, it elected 15 Deputies and 5 Senators and later agreed on a pact for cooperation with the Radical Party, making possible the continuance of the Popular Front Government. Late in the year, following the death of the President, the Socialists nominated their own leader, Oscar Schnake, for the Presidency, but in fear of a conservative victory at the polls, withdrew him and reunited with the Radicals for the Presidential election early in January, 1942.

In the United States socialists (with a little "s") were divided on the war issue. The Social Democratic Federation continued active advocacy of American participation in war. Pro war socialists took the leadership in forming the Union for Democratic Action in the spring of 1941. This group was interventionist, but stressed the importance of advancing democracy at home and winning a democratic peace.

The official Socialist Party until the Japanese at-

tack on Hawaii Dec. 7, 1941, continued its active opposition to American participation in the war and to the steps which led to war. The Party made it unmistakably clear that it was opposed to all totalitarianism, and especially to Hitlerism as the most aggressive form of totalitarianism, but it urged that this country could better advance democracy and, in the long run, serve mankind by keeping out of war. It repeatedly proposed a program to that end with reference to Japan, which program would also have cut down the supply of war material which, with the approval of the Administration, had been flowing to Japan from America.

After the United States was completely involved in war, the National Executive Committee of the Party directed Socialist thought and action to the preservation of civil liberties; the establishment of democratic controls of war and postwar collectivism; the preservation and improvement of the standard of living for low-income groups—despite the war; and taxation according to ability to pay. It declared for the achievement of a democratic Socialism as the only desirable alternative to a totalitarian form of state capitalism. It sought the earliest possible achievement of an enduring and desirable peace, anti-imperialist in nature, supported by the cooperation of peoples and not by the police power of an Anglo-American military alliance.

The year 1941 was an off year in American political campaigns. The chief exception was the municipal election in New York City, where the Socialist Party broke off its effort to work municipally within the American Labor Party because of the strong interventionism of the latter Party, and its policy of indorsing candidates of the Republican and Democratic Parties. The Socialist Party nominated a City-wide ticket headed by Prof. George Hartmann of Teachers College, Columbia University, which received about 25,000 votes, doubling the very small vote cast for the Party in the Presidential election. Dr. Harry W. Laidler, elected under proportional representation to the New York City Council in 1939 under the American Labor Party banner, with the indorsement of Socialists and other groups, was refused renomination by the American Labor Party. He ran again with the indorsement of the Socialist Party and other civic groups and was defeated. Two members of the Social Democratic Federation, which continued to work politically through the A.L.P. were elected to the Council under the designation of the A.L.P. In Bridgeport, Connecticut, Jasper McLevy, leader of the Connecticut Socialist Party—which had broken with the Socialist Party of the U.S.A. in 1936—was easily reelected Mayor.

In the United States and elsewhere there was talk, but no effective action, concerning the rebuilding of an international Socialist organization. It proved far easier for the Communist Party, controlled from Moscow and dependent on Stalin's will, to switch from vehement anti-interventionism to equally vehement interventionism after Hitler's attack on Stalin than for democratic Socialists to reconstruct an international movement in the midst of war. (See also the several countries mentioned above, under *History*.)

NORMAN THOMAS.

SOCIALIST PARTY. See **SOCIALISM**.

SOCIAL SECURITY BOARD (SSB). The Social Security Board has administrative responsibility for three nation-wide programs, designed to bring greater security to the American people. These are (1) old-

age and survivors insurance—a Federal system which provides monthly benefits for workers when they retire after age 65, for certain members of their families, and for certain surviving members of the families of workers who die; (2) employment security—a twofold program which includes the U.S. Employment Service, a system of nationally operated public employment offices, and State unemployment compensation systems operated by the States with the cooperation of the Federal Government; and (3) public assistance under which the Federal Government cooperates with the States in giving immediate cash aid, on the basis of need, to three groups who are unable to support themselves—the aged, the blind, and dependent children.

Employment Security. During 1941 the Board's Bureau of Employment Security assumed increasingly important responsibilities. The U.S. Employment Service, as the official agency for recruiting workers and trainees for the war industries, and as the chief source of information on labor supply and demand, was assigned a key position in the nation's wartime program. This service maintains 1,500 full-time and 3,000 part-time employment offices throughout the country, operating at no charge to employers or workers. It also maintains a clearance system whereby qualified workers may be referred to jobs in any part of the country where there is a demand for their particular skills.

Early in the year the employment service was given important responsibilities in connection with the vocational defense training program. In addition to recruiting qualified individuals for training and placing the trainees in jobs, the employment service advises the training authorities as to the occupations in which training is to be given and the number to be trained, so as to meet the needs of the war industries more effectively.

As the basis for its labor recruiting activities, the employment service maintains a current inventory of workers in several hundred important defense occupations who are available through the public employment offices. This is supplemented by current information on existing and anticipated demands for labor in the major wartime industries and on changing conditions in the labor market. The U.S. Employment Service provides the War Production Board (formerly OPM; q.v.) with detailed reports on plants and localities affected by labor displacement because of material shortages and curtailment orders. These reports are the basis for remedial action by the WPB and the War and Navy contract authorities. The Employment Service is responsible for registering the displaced workers and transferring them as rapidly as possible to war production industries, arranging for the necessary retraining of those workers who cannot immediately qualify for new jobs.

To coordinate the Government's activities in connection with recruitment and training of labor, the OPM, in the summer of 1941, established 12 Regional Labor Supply Committees throughout the country, similar to the National Labor Supply Committee in Washington. The Director of the U.S. Employment Service is a member of the National Labor Supply Committee and the 12 regional representatives of the employment service were designated to act as chairmen of the Regional Labor Supply Committees. Each committee includes representatives of labor, management, and every Government agency concerned with labor supply and training and has broad responsibility for keeping the war industries adequately supplied with trained manpower.

A major development in the administration of the U.S. Employment Service occurred shortly after the United States entered the war. As originally established, each State operated its own employment service, with financial aid and cooperation from the Federal Government. In order to bring about the increased speed and coordination of action necessary to meet the labor demands of the wartime production program, the President, in December, 1941, transferred the personnel and facilities of the State employment services to the Federal Government and provided that they be federally operated by the U.S. Employment Service of the Social Security Board.

During 1941 the U.S. Employment Service made 7,625,000 job placements, more than double the number in 1940. The result of wartime industrial expansion on employment was also reflected in the other phase of the employment security program—unemployment compensation. Unemployment benefit payments by the 48 States, Alaska, Hawaii, and the District of Columbia, decreased sharply during the year. Benefit payments totaling \$340,000,000 were paid to approximately 3,500,000 workers in 1941, as compared with \$520,000,000 paid to approximately 5,500,000 workers in 1940.

Old-age and Survivors Insurance. Under the old-age and survivors insurance system, payment of monthly benefits began on Jan. 1, 1940. During the year 1941, over \$80,000,000 was certified for payments of monthly benefits and \$13,000,000 was certified for lump-sum death payments. The number of individuals on the benefit rolls by Dec. 31, 1941, was over 425,000 with a monthly benefit rate of nearly \$8,000,000. Of the total number of beneficiaries, almost one-half were aged retired workers, more than one-eighth were wives aged 65 or over, more than one-fourth were children under age 18, nearly one-eighth were widows having children under 18 in their care, the remainder were parents and aged widows of deceased workers, principally the latter. Several times as many workers past 65 as the number on the benefit rolls have had sufficient employment and wages to be entitled to monthly benefits but have not applied for them. Some of those who have been awarded monthly benefits have chosen to keep on working or to return to work in preference to receiving benefits. Probably the unexpectedly large percentage of workers past 65 who continued to work is attributable to the increased employment opportunities created by the defense program.

An estimated total of 40,000,000 employees were engaged in employment covered by old-age and survivors insurance during 1941. About 2,400,000 employers reported wages for their employees under this system during the year. At the end of the year there were 477 social security field offices in central towns and cities throughout the country to serve workers and their employers in all matters pertaining to old-age and survivors insurance.

Public Assistance Program. Under the public assistance programs, the Federal Government shares with the State the cost of financial aid to the needy if the State has a plan which has been approved as meeting the standards established by the Social Security Act. By September, 1938, all States, Alaska, Hawaii, and the District of Columbia, had approved plans for aid to the needy aged. During 1941, four State plans for aid to dependent children were approved, bringing the total number of States receiving grants for this form of aid to the needy to 47 (see CHILDREN'S BUREAU); one State plan for aid to the blind was approved during the year bringing the total to 44.

At the end of the year some 3,214,000 needy men, women, and children were receiving monthly cash payments under these plans, including 2,235,000 aged, 53,000 blind, and 926,000 dependent children in 383,000 families. In 1941, total payments to recipients, from Federal, State, and local funds amounted to \$707,871,000 including \$543,207,000 to the aged, \$150,186,000 to dependent children, and \$14,278,000 to the blind.

By the end of 1940, all States had organized and instituted plans for the selection and promotion of personnel on a merit basis in State employment security and public assistance agencies as provided in the 1939 amendments to the Social Security Act. During 1941, plans for conducting examinations were developed in all States and by the end of the year initial examinations had been held and registers established in practically every State.

(For details concerning operation of old-age and survivors insurance, unemployment compensation, and public assistance, see the 1940 YEAR BOOK.)

For statistics by States see the articles on the States under *Social Security*. For enactments, see LABOR LEGISLATION; the States under *Legislation*.

SOCIAL STUDIES. See EDUCATION, LITERATURE under *Sociology*, PHILANTHROPY under *Foundations*.

SOCIETIES AND ASSOCIATIONS The following is a list of some of the leading national and international organizations, with a concise report of their activities during 1941. The organizations are listed alphabetically according to the first specific word in each title. Certain classifications have been omitted in this list because they are presented elsewhere in this volume. The reader is, therefore, referred to the following articles as a supplement: for accrediting associations, to the article on UNIVERSITIES AND COLLEGES, for labor organizations, to LABOR CONDITIONS; for religious bodies, to the table of RELIGIOUS ORGANIZATIONS, as well as to interdenominational groups listed below; for sport organizations, to articles on various sports and *Amateur Athletic Union*, below, for foundations, trusts, etc., to PHILANTHROPY and the articles there referred to. For government agencies, learned academies, and institutes see separate articles.

Actors' Fund of America, founded in 1882 to care for the impoverished, aged, and infirm members of the theatrical profession. Membership (1910) 1,807. President Walter Vincent. Secretary Robert Campbell. Headquarters 1619 Broadway, New York City. The Fund, supported by donations, benefit performances, and a limited endowment, spends from \$140,000 to \$180,000 a year. A Home for retired actors is maintained in Englewood, N. J.

Adult Education, American Association for, founded in 1926 to serve as a clearing house for information, initiate activities, and assist enterprises already in operation, and to aid and advise individuals who, although occupied with some vocation or interest, desire to continue their education. Membership 1,400. President Harry W. Chase. Director, Morse A. Cartwright. Headquarters, 525 West 120 Street, New York City.

Advancement of Colored People, National Association for, founded in 1909 to combat the spirit of persecution which confronts colored people in the United States, safeguard their rights, and secure for them equal opportunity with all other citizens. Membership 100,000. President Arthur B. Spingarn. Executive Secretary, Walter White. Headquarters 69 Fifth Avenue, New York City. The Spingarn Medal for 1941 was awarded to Richard Wright, author, of New York. The 33rd Annual Conference will be held in Los Angeles, Calif., July, 1942. See NEGROES.

Advancement of Music, National Bureau for, founded in 1916 to promote musical interest and activities and to aid those interested in such activities. It has no membership other than the ten members of the Board of Control. President and Managing Director, C. M. Tremaine. Secretary, Osbourne McConathy. Headquarters 45 West 45 Street, New York City. The Bureau cooperates with existing agencies in the field of music and promotes

also National Music Week (beginning first Sunday in May), now expanded to National and Inter-American Music Week, school music contests and festivals, community music, group instruction in applied music, etc.

Advancement of Science, American Association for, founded in 1848, a democratic and representative organization devoted to the whole field of science. Organized in 15 sections, it has over 23,000 members and 184 associated societies. President, Dr. Irving Langmuir. Permanent Secretary, Dr. F. R. Moulton. Headquarters, Smithsonian Institution Building, Washington, D. C. Scheduled meetings, Ann Arbor, Mich., week of June 22, 1942, New York City, week of Dec. 28, 1942, to Jan. 2, 1943. See PSYCHIATRY.

Advancement of Science, British Association for, founded in York, England, in 1831. President, Sir Richard Gregory; Secretary, O. J. R. Howarth. Headquarters, Burlington House, London, W. 1. The Association holds an annual meeting at which papers are read (subsequently published) and sets aside an annual sum for scientific researches. In lieu of the appointed 1941 meeting, a short Conference was arranged, September 26-28, in London, which dealt with Science and World Order. The transactions of this conference, which attracted wide attention, were published in the official journal *The Advancement of Science* (no. 5) in January, 1942. A seven-point charter of scientific principles was adopted at the meeting, by which it was hoped that scientists might make their influence dominant in a better world of the future.

Advertisers, Association of National. See RADIO PROGRAMS.

Aeronautic Association, National, founded in 1922, a non-profit, non-partisan organization representing the public interest in all phases of aviation. Net paid membership over 16,000 with over 100 chapters throughout the United States. President, Gill Robb Wilson. Manager, Kendall K. Hoyt. Headquarters, Willard Hotel, Washington, D. C. Outstanding functions, 1941 Annual Convention and Fourth American Aviation Forum, Louisville, Ky., June 1-4; award of Collier Trophy for 1940 to Dr. Sanford A. Moss of the General Electric Company and to the Army Air Corps for outstanding success in high altitude flying by the development of the turbo-supercharger.

Alcoholism, World League against, founded in 1919 to attain by means of education the total suppression of alcoholism throughout the world. Membership 51 national temperance organizations in 31 countries. Executive Secretary, Ernest H. Cherrington. Headquarters, Westerville, Ohio. During 1941 the League continued to supply factual and source material to temperance organizations in practically every country, to publishers of temperance periodicals, and to schools. It maintains at Westerville, Ohio, a large reference library on the subject of alcohol.

Amateur Athletic Union of the United States (A.A.U.), founded in 1888 to improve and promote amateur sports and the civic interest of the Nation, by the education of all classes in the benefits to be derived by participation in athletics. The A. A. U. establishes a uniform test of amateur standing and uniform rules governing the sports within its jurisdiction, regulates and awards the athletic championship of the United States, and promotes legislation in the interest of sports facilities. President, L. di Benedetto. Secretary, D. J. Ferris. Headquarters, 233 Broadway, New York, N. Y. For activities and awards during 1941, see the separate articles on the various sports.

America First Committee. See FASCISM; UNITED STATES under *Foreign Affairs and Unity*.

American Legion. See separate article.

American-Scandinavian Foundation, listed under *Scandinavian*.

Anglo-American Food Committee. See PUBLIC HEALTH SERVICE.

Antiquarian Society, American, founded in 1812 with the maintenance of a national library of American history as its chief purpose. The library contains nearly 700,000 titles and is free for the use of all qualified scholars. Membership 200. President, Samuel Eliot Morison. Director, C. S. Brigham. Headquarters, Worcester, Mass.

Anti-Saloon League of America, founded in 1895 to promote temperance education and legislation; a non-membership organization. President, Bishop Ralph S. Cushman. General Secretary, George W. Crabbe. Headquarters, 131 B Street, S. E., Washington, D. C.

Applied Psychology, American Association for, founded in 1937 to promote the service which psychology as a science can render society in its application in business, education, industry, law, medicine, mental hygiene, social welfare, and related fields. Membership 680. President, Walter V. Bingham. Executive Secretary, C. M. Louttit. Indiana University, Bloomington, Ind. During 1941 the Association published, in addition to *The Journal of Applied Psychology*, the first biographical directory of applied psychologists. Scheduled meeting, Harvard University, September, 1942.

Archaeological Institute of America, founded in 1879 to promote and direct archaeological investigation and research. Membership, 1,450. President, William Bell Dinsmoor. General Secretary, Meriwether Stuart. Headquarters, 504 Schermerhorn Hall, Columbia University.

Architects, The American Institute of, founded in 1857

to promote the efficiency of the profession, to advance education in architecture and allied subjects, and to make the profession of increasing service to society. Membership: 8,091. President: R. H. Shreve. Secretary: Charles T. Ingham. Headquarters: The Octagon, 1741 New York Avenue, N.W., Washington, D.C. The 74th Annual Convention will be held in Detroit, Mich., June, 1942.

Artists Professional League, Inc., American, founded in 1928 to arouse for American art the regard, preference, and support of the American people; to spread dependable technical knowledge among artists, and to obtain legislation that will benefit the artist's profession and terminate piracy of designs. Membership: about 2,000. Chairman: F. Ballard Williams. Secretary: Wilford S. Conrow. Headquarters: Carnegie Hall, New York City. The American Art Week awards in 1940 were made to the following State Chapters: Massachusetts, Maine, New Jersey, Oklahoma, Oregon, and Nebraska. The 1942 annual meeting was scheduled for February.

Arts, The American Federation of, founded in 1909 to develop art and its appreciation. Chapter Membership: 510. Honorary President: Hon. Robert Woods Bliss. Acting President: George Hewitt Myers. Director: Thomas C. Parker. Headquarters: Barr Building, Washington, D.C. The 1942 Annual Convention and Meeting will be held in Washington, D.C. in May.

Arts and Letters, National Institute of, founded in 1898 to further the interests of literature and the fine arts. Membership: 250. President: Arthur Train. Secretary: Henry S. Canby. Headquarters: 638 West 155 Street, New York City. A Gold Medal was awarded in 1941 to Robert Sherwood for drama. Scheduled meetings: Festival to be given jointly with the American Academy of Arts and Letters in May, 1942, at New York City; Annual Dinner-Meeting, Dec. 16, 1942, in New York City.

Arts and Sciences, American Academy of, founded in 1780 to encourage scientific work and publication. Membership: 791 Fellows and 126 Foreign Honorary Members. President: Harlow Shapley. Corresponding Secretary: Abbott Payson Usher. Headquarters: 29 Newbury Street, Boston, Mass. During 1941 a number of grants for research work were made from funds given the Academy for that purpose. The Amory Septennial Prize was awarded for the first time, and the Rumford Medals for the fortieth Meetings are held monthly, October through May.

Asiatic Association, American, founded in 1898 to study relations between Asiatic countries and the United States. Membership: 200. President: Howard E. Cole. Secretary: John B. Chevalier. Headquarters: India House, Hanover Square, New York City. Annual meetings are held the third Thursday in October at the India House.

Astronomical Society, Royal. See ASTRONOMY.

Audubon Society, National, founded in 1905 for the protection of wild birds and mammals. Membership: 160 affiliated clubs and 6,500 individuals. President: Guy Emerson. Executive Director: John H. Baker. Headquarters: 1006 Fifth Avenue, New York City. Activities during 1941 included enrollment of 200,000 children throughout the country in Audubon Junior Clubs in schools, camps, and youth organizations; training of 264 adult teachers and leaders at the Audubon Nature Camp; conduct of Audubon Wildlife tours in South Carolina, Florida, Texas, and California. Protective warden service provided for wildlife sanctuary areas in New Jersey, Virginia, South Carolina, Florida, Louisiana, and Texas. Research projects were conducted in connection with Roseate Spoonbill, Florida Deer, California Condor.

Automobile Association, American (A.A.A.), founded in 1902 to provide a national network of service and protection for motor-club members and to work for the improvement of motoring conditions. Membership in A.A.A. Clubs: about 1,021,000. President: Thos. P. Henry. General Manager: Russell E. Singer. Headquarters: 17th Street and Pennsylvania Avenue, N.W., Washington, D.C. A nationwide Pedestrian Protection Contest held in 1941 was participated in by all States and hundreds of cities; the first State prize went to Oklahoma and first prize for large cities to Cleveland, Ohio. With the outbreak of war a number of new services were instituted by A.A.A. clubs to aid the war effort and to help maintain automotive transportation. These activities included establishment of Service Motor Leagues to give rides to men in uniform, training courses for volunteers for Civilian Defense drivers' corps, and extensive conservation programs designed to obtain maximum mileage from automobiles and tires.

Automobile Manufacturers Association, founded in 1918 for service to the motor industry. Membership: 29. President: Alvan Macauley. Secretary: Byron O. Foy. Headquarters: New Center Building, Detroit, Mich. The Association conducts annually the National Automobile Show at New York. See MOTOR VEHICLES.

Automotive Council for War Production. See MOTOR VEHICLES.

Bacteriologists, Society of American, founded in 1899 to promote the science of bacteriology and bring together American bacteriologists for demonstration and discussion of methods and consideration of subjects of common interest. Membership: about 1,600. President: Dr. O. T. Avery. Secretary: Dr. I. L. Baldwin. Headquarters: Uni-

versity of Wisconsin, Madison, Wis. The 1942 meeting will be held in Columbus, Ohio, December 28-30.

Bankers Association, American, founded in 1875 to promote the welfare and usefulness of banks, secure uniformity of action on subjects of importance and provide opportunity for discussion thereon, and to provide educational opportunities for bank officers and employees. Membership: 14,214. President: H. W. Koeneke. Headquarters: 22 East 40 Street, New York City. Four new departments were established in 1940—Consumer Credit, Research in Mortgage and Real Estate Finance, Economics, and Customer Relations. Scheduled meetings: Regional, Mar. 4-6, 1942, in New York City; Trust, February 8-5, New York City; Annual Convention, October, Detroit, Mich. See BANKS AND BANKING.

Banking, American Institute of, founded in 1900 to further the education of bankers in the theory and practice of banking and such principles of law and economics as pertain to the banking business, and to establish and maintain a recognized standard of banking education by means of official examinations and issuance of certificates of graduation. Membership about 70,000. President: George T. Newell. Headquarters: 22 East 40 Street, New York City. The 1942 annual convention will be held in New Orleans, La., June 8-12.

Banks, National Association of Mutual Savings, listed under Mutual.

Bar Association, American, founded in 1878 to advance the science of jurisprudence, promote the administration of justice and uniformity of legislation and judicial decision, uphold the honor of the profession, encourage cordial intercourse among members of the Bar, and correlate activities of State Bar Associations. Membership: 80,884. President: Walter P. Armstrong. Executive Secretary: Olive G. Ricker. Headquarters: 1140 North Dearborn Street, Chicago, Ill. In 1941 the Award of Merit was given to the Colorado Bar Association, The Bar Association of St. Louis, and the Nueces County Bar Association of Corpus Christi, Texas. The American Bar Association Medal was awarded to George Wharton Pepper of Philadelphia, Penn., and the Ross Essay Prize to Willard Bunce Cowles of Washington, D.C. Scheduled meetings: House of Delegates, Mar. 2-3, 1942, Chicago; Annual, Aug. 24, 1942, Detroit.

Better Business Bureaus, Inc., National Association of, founded in 1918 to encourage the formation of and assist in the development of Better Business Bureaus engaged in fostering truth in advertising and opposing fraud and/or unethical practices in advertising and selling. Membership: 74 associations. President: R. J. Bauer. Secretary: Hugh Smith, Philadelphia.

Bible Society, American, founded in 1816 to encourage wider circulation of the Holy Scriptures without note or comment throughout the world. Membership probably over 15,000. President: John T. Manson. General Secretaries: Dr. Eric M. North, Dr. F. W. Cropp. Treasurer: Rev. Gilbert Darlington. Headquarters: Park Avenue and 57th Street, New York City. Universal Bible Sunday was observed Dec. 14, 1941. The 1942 annual meeting will be held May 14.

Bibliographical Society of America, founded in 1904 to promote bibliographical research and issue publications. Membership: 850. President: Thomas W. Streeter. Permanent Secretary: George L. McKay, 47 East 60 Street, New York City.

Birth Control Federation of America, Inc., founded in 1939 by the American Birth Control League (1921) and the Birth Control Clinical Research Bureau (1923) to foster planned parenthood by making birth control information available. Membership about 84,000. Margaret Sanger is Honorary Chairman. President: Dr. Richard N. Pierson. Secretary: Mrs. Albert D. Lasker. Headquarters: 501 Madison Avenue, New York City. The 1942 annual meeting is scheduled, Jan. 28-30, in New York City. See BIRTH CONTROL.

Bishops' Relief Committee. See ROMAN CATHOLIC CHURCH.

Blind, Inc., American Foundation for the, founded in 1921 to promote those interests of the blind which cannot be advantageously handled by local agencies. President: M. C. Migel. Executive Director: Robert B. Irwin. Headquarters: 15 West 16 Street, New York City. Activities include research, assistance and consultation service to local agencies, special services to individuals, scholarships, a reference and lending library, and manufacture of Talking Books for the blind.

Blindness, National Society for the Prevention of, listed under Prevention.

B'nai B'rith (Sons of the Covenant), a Jewish service and fraternal organization, created in 1843 to further the unity of the Jewish people and to serve humanitarian causes through a program that encompasses Americanism, youth welfare, education, community and social service, good will, defense of Jewish rights, and, now, activities in National defense. Membership: 125,000. President: Henry Monsky. Secretary: Maurice Bigsger. Headquarters: 1003 K Street, N.W., Washington, D.C. Cooperating with the National defense program in 1941 B'nai B'rith actively aided government and quasi-public agencies, such as the Office of Civilian Defense, American Red Cross, United

Service Organizations: made available its manpower and machinery to bolster civilian morale, sponsored drives for the sale of defense bonds; contributed to programs providing recreational and spiritual needs of men in the armed services. It expended well over \$150,000 in providing aid to needy Jews abroad, and in great public emergencies at home and abroad. Nearly 1,000,000 people of all races and creeds attended B'nai B'rith patriotic rallies, and impetus was added to Americanism activities through the creation of a National Americanism commission. The next triennial convention is to be held in the spring of 1944.

Board of Review of Motion Pictures, Inc., National, listed under *Review*

Botanical Society of America, Inc., established in 1906 as a clearing house for the botanists of America. It supports projects of general interest to botanists, provides an opportunity for the presentation and publication of research studies, and accepts and administers funds for certain purposes. The official publication is *The American Journal of Botany*. Membership: 1,865. President J. T. Buchholz. Secretary, Paul R. Burkholder, Osborn Botanical Laboratory, Yale University, New Haven, Conn. The Society will meet in New York City in December, 1942.

Boys Clubs of America, Inc., organized nationally in 1906 by existing Boys' Clubs to promote their development and improvement. Membership 352 member organizations reaching over 300,000 boys. President William Edwin Hall. Chairman Herbert Hoover. Secretary William Ziegler, Jr. Headquarters 381 Fourth Avenue, New York City. During 1941 16 new Boys' Clubs were organized, 19 buildings erected, and improvement made in programs and service.

Boy Scouts of America, founded in 1910 to promote the ability of boys to do things for themselves and others, to train them in Scoutercraft, and to teach them patriotism, courage, self-reliance, and kindred virtues. Membership, 2,162,570. President, Walter W. Head. Chief Scout Executive, James E. West. Headquarters 2 Park Avenue, New York City. The Program for Strengthening and Invigorating Democracy, organized and launched in 1940, was further emphasized during 1941 and Scouts took active part in the Defense Program of our Government. Troops took inventory of membership, equipment and training on a nation-wide scale in order to be in a position to measure their readiness to serve the Government. Scouts took part in many activities in relation to the unlimited emergency in the National Defense Program, among which were the distribution of official Government posters, the collection of aluminum and the collection and salvage of waste paper material; all three undertaken at the special request of the Government. On Saturday, June 21, 3,500 Scouts took part in the unveiling of the William D. Boyce Memorial, a life-size statue of the McKenize Boy Scout Statuette of the Unknown Scout who motivated William D. Boyce to bring the Scout idea to America in 1910. The Thirty-First National Council Meeting of the Boy Scouts of America was held at the Willard Hotel, Washington, D. C. May 16-17, 1941. Five thousand Boy Scouts made their 22nd Annual Pilgrimage to the Grave of Theodore Roosevelt on Oct. 18, 1941 at Oyster Bay, L. I.

British War Relief Society, Inc., founded in 1939 to provide comforts for the British troops, now the largest American organization operating for the sole cause of civilian war relief in Britain. It represents an amalgamation of the Society and the Allied Relief Fund, and as such has raised, since inception, nearly \$15,000,000 in cash and in kind at a cost of under seven cents on the dollar, made possible through the efforts of volunteers all over the country organized in nearly 900 committees. The Society has provided for British relief such aids as thousands of lbs of winter clothing, hundreds of mobile Feeding Kitchens, air raid relief equipment, ambulances, surgical units, hospital care, and so forth. Overhead expense has totaled about 9.4 per cent of the cash contributions received and 6.97 per cent of contributions of all kinds. Chairman Samuel Salvage. President Winthrop W. Aldrich. Secretary George R. McGee, Jr. Headquarters 730 Fifth Avenue, New York City.

Broadcasters, National Association of, founded in 1922 to promote and defend the American system of privately owned, competitively operated radio and to render every aid to those engaged in it to enable them to operate in the public interest. Membership 510. President Neville Miller. Assistant to the President: O. E. Arney, Jr. Headquarters: Normandy Building, 1626 K Street, N.W., Washington, D. C.

Broadcast Music, Inc. (B.M.I.), founded in 1940 to provide a new source of music supply to the broadcasting industry. Membership corporation owned by 743 radio stations. President Neville Miller. Executive Vice President Sydney M. Kaye. Vice President, General Manager, Merritt E. Tompkins. Headquarters 580 Fifth Avenue, New York City. During 1941 B.M.I. supplanted ASCAP music on the air for ten months, licensed music to Canada, Australia, England, and South America as well as in the United States, and for the first five months produced more music than all other music houses combined.

Bund, German-American. See *FASCISM*.

Bundles for Britain, Inc., founded in January, 1940,

to supply aid and relief to the citizens of Britain and the British Empire. Membership about 1,000,000. President: Mrs. Wales Latham. Secretary: Mrs. Robert Worth Bingham. Headquarters 475 Fifth Avenue, New York City. The outstanding activity of 1941 was the Christmas campaign held in New York City for Britain's children, December 1-13. Various other entertainments were held elsewhere during the year.

Business and Professional Women's Clubs, Inc., The National Federation of, founded in 1919 to bring about a spirit of cooperation among business and professional women of the United States and to extend opportunities to them through education along the lines of industrial, scientific, and vocational activity. The Federation adopted the following objective in 1941: "We seek to vitalize the processes of democracy that all people may enjoy the basic satisfactions of life in a world at peace." Membership 76,000. President Dr. Minnie L. Maffett. Executive Secretary Louise Franklin Bache. Headquarters: 1819 Broadway, New York City. During 1941 the Federation's program theme was "Strengthen Democracy for Defense." This program outlined cooperative work by the clubs in their communities in such defense activities as vocational training, individual and community health, participation in the work of defense councils and citizens' committees, and stressed particularly the importance of truly democratic procedures both in clubs and communities. The Federation published "Defense on Main Street" in cooperation with the Council for Democracy. It inaugurated a Master File of members as a tool to be used in the defense and post-defense periods. The next biennial convention will be held in New York City, July 11-16, 1943.

Camp Fire Girls, Inc., founded in 1912 to provide an opportunity for girls' personal development, through group experience, leisure-time activities, and cultivation of skills. Membership 307,000. President Mrs. Elbert Williams. Secretary and National Executive Mr. Lester F. Scott. Headquarters, 88 Lexington Avenue, New York City. During 1941 the project "Treasure Trails" found Camp Fire Girls exploring America's cultural heritage. They studied the music, dance, poetry and paintings of other countries, and traced the influence of these contributions in America. They gained appreciation of the arts by visiting museums, attending concerts, and keeping "Treasure" scrapbooks, and through their study were stimulated to make creative contributions in one or more of the Fine Arts. The older girls made a survey of the influence of the movies, radio and magazines, polling the entertainment tastes of young people and making valuable recommendations to interested authorities based on the results of their study.

Cancer, Inc., The American Society for the Control of, listed under *Control*.

Cancer Institute, National. See *PUBLIC HEALTH SERVICE*.

Care of European Children, Inc., U.S. Committee for the, organized July 1, 1940, to coordinate the resources available in the United States for the care of child victims of the war in Europe, the program including the collection of funds, finding homes, placing children, and providing for their proper care. Honorary President Mrs. Franklin D. Roosevelt; President: Marshall Field. Executive Director: Robert Lang. Secretary: Miss Agnes King Inglis. Headquarters 215 Fourth Avenue, New York City. See *CHILDREN'S BUREAU*.

Catholic Welfare Conference, National. See *ROMAN CATHOLIC CHURCH*.

Chamber of Commerce, International, founded in 1920 to provide business men and organizations with a continuing mechanism for interchange of information, joint study, consultation, and periodical conference. Membership. National Committees in 32 countries and affiliated organizations in 18. President: J. Sigfrid Edstrom of Sweden. Chairman of the American Section Eliot Wadsworth; Manager, Chauncey D. Snow. Headquarters (until November, 1939): 38 Cours Albert Premier, Paris, France, (during wartime) 9, Vastra Tradgardsgatan, Stockholm, Sweden. Offices of the American Section. 1615 H Street, N.W., Washington, D. C.

Chamber of Commerce, United States Junior. An organization founded in 1920 to organize young men between 21 and 35 for civic service and community building activities. Membership 125,000. President: Walter W. Finks. Executive Vice President, Douglas H. Timmerman. Headquarters: Merchandise Mart Building, Chicago, Ill. Americanism week is observed February 12-22 annually. Prizes and trophies valued at about \$8,000 were awarded in 1941 for committee activities and excellence of operation, and local and National Distinguished Service Awards were made to outstanding young men. The 1942 annual convention will be held in Dallas, Tex., June 17-20.

Chamber of Commerce of the United States, established in 1913 primarily as a vehicle for the expression of national business opinion on important economic questions. Membership: 1,673 chambers of commerce and trade associations, 6,709 individuals, and 3,672 associates. President: Albert W. Hawkes. Secretary: Ralph Bradford. Headquarters: 1615 H Street, N.W., Washington, D. C. The Chamber is centering its attention mainly upon

defense problems, holding many regional conferences of business readers in all parts of the country to discuss the place of industries in the national defense effort. Chamber spokesmen appear before congressional committees to present a practical business viewpoint on pending legislation. Twelve service departments are maintained covering the main divisions of business activity. Publications include the *Nation's Business*, a monthly, the *Washington Review*, bimonthly, special legislative bulletins, and committee reports. The 30th Annual Meeting will be held in Washington, D. C., Apr. 27-30, 1942.

Chautauqua Institution, founded in 1874 for religious and educational purposes. President Arthur E. Bestor. Secretary Charles E. Pierce. Headquarters Chautauqua, N. Y. A program of music, lectures, and religious services is conducted during July and August each year.

Chemical Society, American, founded in 1876 to advance chemistry, chemical research and knowledge, and the qualifications and usefulness of chemists, incorporated under Act of Congress, 1938. Membership 28,763. President Harry N. Holmes. Secretary Charles L. Parsons. Headquarters 1155 Sixteenth Street, N. W., Washington, D. C. In 1941 the Priestley medal was presented to Thomas Midgley, Jr., the Award in Pure Chemistry to Karl August Folkers, the Eli Lilly and Company Award to David Rittenberg, and the Borden Award in the chemistry of milk to Claude S. Hudson. Two general meetings were conducted during the year at which a successful Employment Clearing House brought together employers and employees. The Society's publications were increased in size and four local sections were established. See CHEMISTRY.

Child Labor Committee, National, founded in 1904 to promote legislation dealing with child labor and related subjects, conduct investigations, advise on administration, and maintain an information service. Membership about 15,000. General Secretary Courtenay Dinwiddie. Headquarters 419 Fourth Avenue, New York City. Activities in 1941 included an investigation of the absence from school of children for work in cotton-growing areas, participation in hearings on Federal bills affecting child labor and related subjects, activities in connection with State child labor legislation. Six new publications and a three-dimensional map on migrants were prepared during the year.

China Society of America, The, founded in 1913 to promote friendly relations and a better understanding between the peoples of the United States and China. Membership 300. President William M. Chadbourne. Secretary Florence Broesler. Headquarters 570 Lexington Avenue, New York City. In addition to distributing information on China to schools and clubs and publishing *China* magazine, the Society held dinners in 1941 in honor of Dr. T. V. Soong and Dr. Quo Tai chi and published a revised edition of the *Syllabus of the History of Chinese Civilization and Culture*.

Christian Endeavor, International Society of, formed in 1885 to further the training of young people in the Christian life, among societies and unions in about 50 evangelical denominations in the United States and Canada. Membership approximately 2,000,000. President Dr. Daniel A. Poling. Executive Secretary Carroll M. Wright. Headquarters 41 Mt. Vernon Street, Boston, Mass. The next convention will be held in 1943.

Christian Front. See UNITED STATES under *Unity*.

Christians and Jews, National Conference of, founded in 1928 to moderate and finally eliminate a system of prejudices which disfigures business, social, and political relations. Membership 21,000. Co-Chairmen: Arthur H. Compton, Carlton J. H. Hayes, Roger W. Straus. President: Everett R. Clunchy. Headquarters 381 Fourth Avenue, New York City. Conferences of Protestants, Catholics, and Jews will be held locally and regionally throughout 1942.

Churches, The World Council of, established as a provisional committee after the world conferences at Oxford and Edinburgh in 1937 to unite the churches of the world on the Federal principle for cooperative service and the promotion of Christian unity. Membership 75 denominations. World Chairman The Archbishop of York. General Secretaries Dr. W. A. Visser 't Hooft, Geneva, Dr. William Paton, London, Secretary in America, Dr. Henry Smith Leiper, New York. Headquarters 297 Fourth Avenue, New York City. 41, Avenue de Champ, Geneva, Switzerland. The American Section meets in New York City in May and October.

Citizens Emergency Committee on Nondefense Expenditures, Inc., organized in July, 1941, to support, in recognition of the need for all-out defense, sound recommendations for economies in nondefense expenditures on a nonpartisan, nonpolitical basis. Chairman, Dr. Henry M. Wriston. Secretary Dr. Guy E. Snavely. Headquarters 1155 Sixteenth Street, N. W., Washington, D. C.

City Managers' Association, The International, founded in 1914 to aid in the improvement of local government administration and the proficiency of city managers. Membership: 657. President: Roy S. Braden. Headquarters 1313 East 60 Street, Chicago, Ill. Publications issued in 1941 included *The Municipal Year Book, 1941*, by Ridley and Nolting. The Institute for Training in Municipal Administration made available a new correspondence course.

Local Planning Administration, which completed the series of ten courses in municipal administration. See MUNICIPAL GOVERNMENT; SEWERAGE.

Civil Engineers, American Society of, founded in 1852 to advance engineering and architectural knowledge and practice, to maintain high standards and encourage intercourse in the profession. There are 64 local sections and 121 affiliated student chapters. Membership, 17,353. President, Ernest B. Black. Secretary George T. Seabury. Headquarters Engineering Societies Building, 33 West 39 Street, New York City. The Norman Medal was awarded in 1941 to Shortridge Hardesty and Harold E. Wessman, the Croes Medal to Edward J. Butler, Quentin B. Graves, and Franklin F. Snyder, the Rowland Prize to John D. Galloway, the Laurie Prize to A. M. Rawns, A. Perry Banta, and Richard Pomeroy, the Colingwood Prize for Juniors to Kenneth D. Nichols, the Construction Engineering Prize to Russel G. Cone, the Daniel W. Mead Prize for Juniors to Allen Jones, Jr., the Daniel W. Mead Prize for Students to Harry A. Balmer, and the Hering Medal of the Sanitary Engineering Division to Joseph W. Ellms. The 1942 Annual Meeting was scheduled January 21-23 in New York City, other meetings at New Orleans in April, Spokane in July, and Atlanta in October, 1942.

Civilian Technical Corps, founded in June, 1941, as a non-military, non-combatant body of paid volunteer civilian craftsmen, established by the British Government to maintain technical equipment used by British forces and their allies. The Corps is a uniformed civilian organization. United States citizens may join without loss of citizenship. Americans joining the Corps were drafted, given free board and lodgings, clothing, and medical care, and were paid salaries ranging from \$24.12 per week to \$38.65. Headquarters 25 Broadway, New York City.

Civil Liberties Union, American, founded in 1920 to maintain the Bill of Rights for everybody, without exception. Membership, 5,626. Chairman of the National Committee Edward A. Ross. Chairman of the Board of Directors Rev. John Haynes Holmes. Director Roger N. Baldwin. Headquarters 170 Fifth Avenue, New York City. The Union continued during the year 1941 its practice of publicly condemning or commending proposed legislation or court decisions affecting democratic rights. Publications included the yearly *Story of Civil Liberty*, the *Civil Liberties Quarterly*, and a running index of all relevant magazine articles.

Civil Service Reform League, National, founded in 1881 to improve and extend the merit system in the public service. Membership 3,000. President Samuel H. Ordway, Jr.; Executive Secretary H. Eliot Kaplan. Headquarters 67 West 44 Street, New York City. In 1941 a Committee on Labor Relations was organized to study the problem of governmental labor relations and unionization of public employees. The League's field program was extended through organization of State committees and correspondents throughout the country. During the year the League was active in behalf of the inclusion of national defense positions under civil service rules and adoption of civil service laws in numerous States and cities.

Civitan International, founded in 1918 for the building of good citizenship, curbing of crime, and diminution of tuberculosis and venereal diseases. Membership about 10,000. President Herbert Z. Hopkins. Secretary Arthur Cundy. Headquarters 800 Farley Building, Birmingham, Ala. For the fiscal year 1941-42 the organization reported the largest gain since its inception. Primary objective conduct of Citizenship Essay Contests in public high schools throughout the country, participated in by some 5,000 students, \$500 in prizes being awarded. Next International Convention will be held in St. Petersburg, Fla., June 30-July 3, 1942.

Classical League, American, formed in 1919 as a national organization for teachers of classics. Membership 4,600. President, B. L. Ullman. Secretary-Treasurer Rollin H. Tanner, New York University, New York City. The organization publishes *The Classical Outlook* and maintains a Service Bureau. It will meet (with the National Education Association) at San Francisco, Feb. 23, 1942, and at Denver, June 29, 30-July 1, 1942.

Colored People, National Association for the Advancement of, listed under *Advancement*.

Composers and Conductors, The National Association for American, founded in 1933 by the late Henry Hadley to advance the interest of the American composer, especially in relation to orchestral conductors, and to secure a hearing for serious works of merit. Membership over 500. President Sigmund Spaeth. Headquarters The Henry Hadley Studio, 15 West 67th Street, New York City. In addition to regular meetings and concerts, the Association sponsored in 1941 All-American programs at Carnegie Chamber Music Hall, Carnegie Hall, the MacDowell Club and elsewhere. Broadcasts were given every beginning in October, and the materials of these programs were distributed to over 300 local radio stations all over the United States. Local chapters of the Association were formed in Los Angeles (with Charles Wakefield Cadman as chairman) and Naomi Reynolds as secre-

tary), San Francisco (led by Frederick Preston Search), San Diego (Radie Britain) and elsewhere. Meetings were held in connection with the national conventions of related organizations, such as the National Federation of Music Clubs, whose prize-winning compositions of the year were given New York performances, as in the past. Cooperation was also given to the concerts of the National Orchestral Association, presenting prize-winning American works, played by prize-winning American artists. The Henry Hadley Medal, for outstanding service to American music during 1940-41, was awarded to Sigmund Spaeth. Certificates of merit were awarded to Paul Creston, Morton Gould, Frances Densmore, C. G. Capell, Joseph Barone, John Charles Thomas, Edwin McArthur, and Mrs. Vincent Hilles Ober.

Composers, Authors and Publishers, American Society of (ASCAP), founded in 1914 to afford American creators of music a cooperative movement to protect performing rights under music copyrights from unauthorized commercialization. Membership, 1,269 composers and authors (172 deceased) and 153 publishers. President Gene Buck, Administrative chairman, E. O. Mills (General manager), John C. Paine. Headquarters, 30 Rockefeller Plaza, New York City. ASCAP continued its now familiar annual Nathan Burkan Memorial Competition, awarding \$100 to each graduate in law in leading schools throughout the country for the best essay on copyright law. ASCAP members have received virtually no revenue from foreign affiliates since the outbreak of the war. See **MUSIC**.

Composers, Inc., The League of, founded in 1923 to further the works by living composers of all nationalities, as well as to help composers by commissions for new works and general promotion of their compositions. Executive Chairman, Mrs. Arthur M. Reis. Headquarters, 113 West 57 Street, New York City. The League publishes a quarterly, *Modern Music*, and conducts a program series in New York and over the air.

Consumer-Retailer Council, Inc., National, founded in 1937 to enable consumers and retailers to work out together their mutual problems. Membership: American Association of University Women, American Home Economics Association, General Federation of Women's Clubs, American Retail Federation, National Association of Food Chains, National Retail Dry Goods Association, National Shoe Retailers Association, National Better Business Bureau, Inc. Chairman, H. W. Brightman. Executive Secretary, Roger Wolcott. Headquarters, 8 West 40 Street, New York City. Accomplishments of 1941 included launching a "Six Point Consumer-Business Program in a Defense Economy." This program, which was geared to the problems created by national defense, was carried out cooperatively by consumer and business groups. Publications of the year included *Informative Labeling, Informative Selling, Food Labels Approved by the National Consumer-Retailer Council, Textile Labels Approved by the National Consumer-Retailer Council*, and *Standard Sizes for Children's Garments*, a booklet published in collaboration with the U. S. Bureau of Home Economics. As part of its program to promote informative labeling, the Council during 1941 approved, as to the type of information they provide, approximately 250 labels in the canned food and textile fields. Labels which have been approved carry the legend "This is the type of label suggested by the National Consumer-Retailer Council." The annual dinner meeting, held Dec. 2, 1941, and devoted to "Textiles in a Defense Economy," was attended by 1,200 representatives of consumer groups and retail, manufacturing, and trade associations. See **CONSUMERS' COOPERATIVES**.

Consumers League, National, founded in 1899 to awaken consumer responsibility for conditions under which goods are made and distributed, and through investigation, education, and legislation to promote fair labor standards. Membership, 15,000, including State and National Leagues. President, Josephine Roche. Chairman of the Board of Directors, John Howland Lathrop. Headquarters, 114 East 82 Street, New York City. See **CONSUMERS' COOPERATIVES**.

Consumers' Research, Inc., founded as the Consumers' Club in 1927 and incorporated in 1929 to provide unbiased information and counsel on goods bought by the ultimate consumer. Number of subscribers, 60,000. President and Technical Director, F. J. Schlank. Secretary, Clark C. Williver. Headquarters, Washington, N. J. The *Annual Cumulative Bulletin*, issued in September, 1941, listed over 4,000 products by brand name as *Recommended, Intermediate, and Not Recommended*, and included basic reference data on consumer problems. An analysis of 1941 automobiles was issued in February, 1941. See **CONSUMERS' COOPERATIVES**.

Contemporary Music, International Society for. See **MUSIC**.

Contractors of America, Inc., The Associated General, listed under **General**.

Control of Cancer, Inc., The American Society for the, founded in 1913 to collect and disseminate information on all aspects of the cancer problem. Its chief purpose is to save lives through education. The Society is authorized to cooperate with recognized medical agencies to help improve treatment facilities. The Society does not treat

patients, nor administer hospitals, clinics, or laboratories. Membership, 600. President, Dr. John J. Morton, Jr. Secretary, Dr. Frank E. Adair. Headquarters, 350 Madison Avenue, New York City. The lay educational program is directed by the Women's Field Army with over 225,000 members. During 1941 more than 1,000 radio programs and announcements on cancer were broadcast; 3,000,000 leaflets were distributed and over 10,000 lectures delivered. Exhibits on cancer were seen by more than 500,000 people throughout the United States and it is estimated that a total audience of 9,000,000 have seen the Society's motion picture "Choose To Live" produced in cooperation with the U. S. Public Health Service. The 1942 annual meeting of the American Society for the Control of Cancer is scheduled for March 7 in New York City.

Cooperative Analysis of Broadcasting. See **RADIO PROGRAMS**.

Cooperative League of the USA, The, founded in 1916 as a national educational federation of consumer cooperatives devoted to the extension of the consumer of cooperative owned business enterprises. Membership, 1,250,000 in 21 affiliated regional associations. President, Murray D. Lincoln. General Secretary, E. R. Bowen. Headquarters, 608 South Dearborn, Chicago, 726 Jackson Place, N.W., Washington, D. C.; 167 West 12 Street, New York City. The highlight of the League's activities in 1941 was the launching of the first Nationwide Co-op Drive in October, a year-long drive with the dual purpose of strengthening the existing cooperatives internally, and to awaken America to the advantages of consumer cooperation. The 14th Biennial Congress, which will close the Co-op Drive, will be held in October, 1942. See **CONSUMERS' COOPERATIVES**.

Cooperatives. See also under *Farmers' Educational and Cooperative Union*; the articles on **AGRICULTURAL COOPERATION**, **CONSUMERS' COOPERATIVES**.

Cotton Manufacturers, National Association of, founded in 1854 for service to cotton mills in the northeastern section of the United States. Membership about 450. President, Russell T. Fisher. Headquarters, 80 Federal Street, Boston, Mass. Student Honor Medals were awarded in various textile schools annually.

Credit Men, National Association of, founded in 1896 as a nonprofit making organization of manufacturers, wholesalers, and bankers affiliated for the promotion of wholesome business by maintaining a sound credit structure. Membership, 20,000. President, R. C. Wilson. Secretary-Treasurer, Henry H. Heimann. Headquarters, One Park Avenue, New York City. The Annual Credit Congress will meet in Cincinnati, May 10-14, 1942.

Credit Union National Association, founded in 1934 to organize and service credit unions in the United States and Canada. Membership, 48 State leagues serving 3,000,000 members. President, William Reid. Managing Director, Roy F. Bergengren. Headquarters, 1342 E. Washington Street, Madison, Wis. Canadian credit unions were accepted to membership in 1940, and 1,364 new unions were organized. The eighth annual meeting will be held in Madison, Wis., May, 1942.

Cruelty to Animals, The American Society for the Prevention of, listed under **Prevention**.

Daughters of the American Revolution, National Society of, founded in 1890 for historical, educational, and patriotic purposes. Membership about 143,000 in 2,554 chapters. President General, Mrs. William H. Pouch. Headquarters, Memorial Continental Hall, Washington, D. C. During 1941 gifts totaling \$100,000 for 14 approved schools for foreign-born and Southern mountaineers were approved. Regular activities included instruction in the right use of leisure and respect for rights of others to 255,584 children in Junior American Citizens Clubs and distribution of about 300,000 manuals for citizenship, in 16 languages, to aid in naturalization. High school seniors from every State, winners of the Good Citizenship Contest, were given a trip to Washington. About 58,000 copies of the *National Defense News* were distributed. Hundreds of thousands of Flag Codes and copies of other patriotic literature were handed out. Through some 1,400 clubs, the Society furthered its educational endeavors in training in Girl Home Making.

Daughters of Union Veterans of the Civil War, organized in 1885 to perpetuate the memories of our fathers and their loyalty to the Union, and to keep alive the history of those who participated in that heroic struggle for the maintenance of free government. Placing of memorial wreaths to the Grand Army of the Republic at the Court House, Columbus, Ohio, at Lincoln Memorial, Washington Monument, Washington, D. C., and at the Civil War Unknown and World War Unknown Tombs in Arlington and Battleground Cemetery, were the principal happenings of 1941.

Day Care of Children, Joint Planning Board on the. See **CHILDREN'S BUREAU**.

Defend America, Committee to. See **UNITED STATES under Foreign Affairs**.

Democracy, Council for, founded in August, 1940, and dedicated to the propagation of an American faith in democracy. Membership, 120. Chairman, Raymond Gram Swing. President, Ernest Angell. Secretary, Evans Clark.

Headquarters: 285 Madison Avenue, New York City. The program of the Council comprises publications, radio programs, public rallies, editorial releases, a speakers service, and community and organization cooperation. During 1941 huge Council-sponsored rallies were held in Bridgeport, Conn., and Madison Square Garden, New York City. Over the radio, James O'Neary was presented in "New Year's Resolution for Americans"; an Easter Sunday roll call of the occupied nations of Europe, "We Shall Live Again," was broadcast around the world, with European spokesmen comprising Princess Juliana, Crown Prince Olaf, Eve Curie, and Ignace Jan Paderewski. The radio series, "Speaking of Liberty," was broadcast for 19 weeks. A second series was begun later in the year. The Council published two monthly clip-sheets containing pro-democracy editorial material. One of these, *News and Features*, was used by nearly 900 newspapers. In education, cooperation was maintained with professional societies. The most notable achievement in the field of Community Activities was the guidebook, *Defense on Main Street*, supplemented by a periodic bulletin, *Action*. Seven pamphlets were issued to help Americans understand the basic issues on which they must make decisions.

Democratic Action, Union for, founded May 10, 1941, to carry on a two-front fight for democracy, at home and abroad, to oppose totalitarianism in all forms, to organize American liberals to give progressive meaning to the present war against Fascism. Membership: 5,000. Chairman: Dr. Reinhold Niebuhr. Secretary: Murray Gross. Headquarters: 202 West 40 Street, New York City. The national convention was held in February, 1941. See **SOCIALISM**.

Dental Association, American, founded in 1859 for educational purposes. Membership: about 52,000. President: Oren A. Olver. General Secretary: Harry B. Pinyon. Executive Secretary: Gerald D. Timmons. Headquarters: 212 E. Superior Street, Chicago, Illinois. The 1942 meeting will be held in Boston, Mass. See **DENTISTRY**.
Distilled Spirits Institute. See **LIQUOR PRODUCTION**.
Dress Institute. See **FASHION EVENTS**.

Eagles, Fraternal Order of, a Fraternal and beneficial Order founded in 1898. Membership: 700,000. Grand Worthy President: George C. Tank. Grand Secretary: John A. Abel. Headquarters: Kansas City, Missouri.

Economic Association, American, founded in 1885 to encourage research and freedom of discussion and issue publications. Membership: 3,372 members, 1,317 subscribers. President: Sumner H. Slichter. Secretary-Treasurer: James Washington Bell. Headquarters: Northwestern University, Evanston, Ill. The annual meeting in New York City, Dec. 27-30, 1941, was devoted to current vital problems, such as economic adjustments after wars, the tax problem, the determinants of investment decisions, problems of international economic policy for the United States, the changing position of the banking system and its implications for monetary policy, the determination of wages, the schism in agricultural policy, economic problems of American cities, the cost and demand functions of the individual firm, the work of the Temporary National Economic Committee, trade unions and the law, and the lasting effects of the war and the defense program upon economic institutions. In addition to the *American Economic Review*, a quarterly publication, the Association publishes the proceedings of the annual meetings, a handbook or directory, and occasional monographs, e.g., appraisal of the work of the TNEC.

Economic Entomologists, American Association of, founded in 1889 to promote the study and to advance the science of entomology, and to publish the *Journal of Economic Entomology*, etc. Membership: 1,434. President: J. R. Parker. Secretary: Ernest N. Cory. Headquarters: College Park, Md. The 1942 meeting will be held in New York City.

Economic Research, National Bureau of, founded in 1920 to encourage investigation, research, and discovery, and the application of knowledge to the well-being of mankind; and in particular to conduct exact and impartial investigations in the field of economic, social, and industrial science. Membership: 23 members of the Board of Directors. President: W. L. Crum; Executive Director, William J. Carson. Headquarters: 1819 Broadway, New York City. Six publications were issued in 1941 dealing with finance companies, consumer credit, credit practices, residential real estate, national income, capital formation, etc.

Economy League, The National, founded in 1932 as a patriotic, national, non-partisan organization advocating sound Federal finance. Membership: 3,500. Executive Director: H. G. W. Sundelof. Research Director: Willard D. Avant. Headquarters: 280 Madison Avenue, New York City.

Education. See also the societies listed under *Adult Education*, *International Education*, *Kindergarten Association*, *Progressive Education*. For accrediting associations, see the article on **UNIVERSITIES AND COLLEGES**.

Education, American Council on, a council of national educational associations, organizations having related interests, approved educational institutions. State departments of education, and city school systems; founded in 1918 as a center of cooperation and coordination in the field of education. Membership: 542 organizations and in-

stitutions. President: George F. Zook. Chairman: Ben G. Graham. Secretary: George D. Stoddard. Headquarters: 744 Jackson Place, N.W., Washington, D.C. Education and the national defense claimed the first interest of the Council in 1941. Special committees kept in touch with swiftly moving government procedures and to serve as a clearinghouse of information to members. High officials of the War Department, the Navy Department, the Council on National Defense, the National Resources Planning Board, members of Congress, and others were kept informed concerning educational resources, both of personnel and facilities. The Council sought the judgments of educators in all quarters of the country and made these judgments known to officials responsible for government policy. By means of bulletins, letters, and conferences, the Council kept educators informed concerning the plans of government as those plans were being formulated. The work of the standing committees was continued during the year. The annual meeting will be held May 1-2, 1942. See **EDUCATION YOUTH MOVEMENT**.

Education Association of the United States, National (N.E.A.), founded in 1857 to advance the interests of the teaching profession, promote the welfare of children, and foster the education of all the people. Membership: 211,191. President: Myrtle Hooper Dahl. Executive Secretary: Willard E. Givens. Headquarters: 1201 Sixteenth Street, N.W., Washington, D.C. A National Commission for the Defense of Democracy Thru Education was created in 1941. The Department of Business Education established offices in the N.E.A. building. The 1942 annual meeting will be held in Denver, June 28-July 2. See **EDUCATION under War Demand**.

Education by Radio, National Committee on, founded in 1930 to act as spokesman for organized education, to act as a clearinghouse for information about educational broadcasting, and to promote the educational use of radio and cooperative radio councils. Membership: nine representatives of constituent organizations. Chairman: Dr. Arthur G. Crane. Secretary: Ruth L. Goodnoo. Headquarters: 1 Madison Avenue, New York City.

Electrical Engineers, American Institute of, founded in 1884 for the advancement of the theory and practice of electrical engineering and allied subjects and maintenance of high professional standards. Membership: 18,831. President: David C. Prince. National Secretary: H. H. Henline. Headquarters: 33 West 39 Street, New York City. The Lamme Medal was awarded in 1941 to Comfort A. Adams for work in alternating current machinery and electric welding. The 1942 national conventions will be held in New York City, January 26-30, Chicago, June 22-26, and Vancouver, B.C., September 9-11.

Elks, Benevolent and Protective Order of, a fraternal organization founded in 1868. Membership: 500,000. Grand Exalted Ruler: John S. McClelland. Grand Secretary: J. F. Masters. Headquarters: Elks National Memorial Building, Chicago, Ill. A Commission on National Defense and Public Relations is cooperating with the U.S. Government in National Defense, with each of the 1,400 Subordinate Lodges helping obtain enlistments of aviation cadets. The 1942 Annual Grand Lodge Session will be held in Portland, Ore.

Emergency Cooperating Committee for Children and Youth. See **YOUTH MOVEMENT**.

Engineering Societies. See under *Civil Engineers*, *Electrical Engineers*, *Mechanical Engineers*, *Mining and Metallurgical Engineers*.

English Institute, The, founded in 1939 to afford an opportunity for mature scholars in the field of English to meet together in a series of informal conferences and discuss questions of literary and philological research. In 1941 the conferences of the third session were attended by 130 persons. Chairman: Prof. Tucker Brooks. Secretary: Rudolf Kirk, Rutgers University, New Brunswick, N.J. Selected papers read at the sessions are published in the *English Institute Annual*, edited by Rudolf Kirk. The third volume will appear in January, 1942. The fourth session is to be held, Sept. 7-12, 1942, at Columbia University, New York City.

English-Speaking Union of the United States, founded in 1920 to draw together the English-speaking people of the world. It cooperates with the English-Speaking Union of the British Empire, Dartmouth House, London. Membership: about 15,000. Headquarters: 80 Rockefeller Plaza, New York City. President: Dr. James R. Angell. Chairman: Henry J. Fisher. Treasurer: Charles A. Wright. General Secretary: Frank S. Coan. Activities in 1941 included sponsoring a nation wide concert tour by Gracie Fields which netted more than \$100,000 for British war relief, enlisting members in 40 branches in active relief work for Britain, appointing a Policy Committee with Lewis Douglas as Chairman, and arranging speaking tours.

Engraving, American National Committee of. See **ART under Prints**.

Entomologists, American Association of Economic, listed under *Economic*.

Winner of the Public Speaking Contest was R. L. Jones, Carrollton, Ala. The 1942 F.F.A. Convention will be held in Kansas City, Mo. in October, during the week of the American Royal Live Stock Show.

Garden Club of America, founded in 1913. Membership, about 8,000. Secretary: Mrs. Barent Lefferts. Headquarters, 598 Madison Avenue, New York City. The 1942 meeting will be held in St. Paul, Minn., in June.

Gas Appliance and Equipment Manufacturers, Association of. See GAS INDUSTRY.

Gas Association, American, founded in 1918 by holding companies, service companies, gas operating companies, manufacturers of gas appliances and equipment, and individuals. Membership, 5,300. President George S. Hawley. Managing Director: Alexander Forward. Secretary: Kurwin R. Boyce. Headquarters, 420 Lexington Avenue, New York City. In 1941 the Charles A. Munroe Award was

granted to Thomas R. Weymouth, formerly Vice President of the Columbia Gas and Electric Corporation. The 1942 annual convention will meet in San Francisco in October. See GAS INDUSTRY.

General Contractors of America, Inc., The Associated, a trade association founded in 1918. Membership: 2,765. President M. W. Watson. Managing Director H. E. Foreman. Headquarters Munsey Building, Washington, D.C. The annual convention will be held at Seattle, Wash., Feb. 16-19, 1942. A.G.C. members performed a large portion of the National Defense Construction Program initiated in 1940.

Geographical Society, American, a research institution founded in 1852. Membership 3,211. President, Roland L. Redmond. Director, Dr. John K. Wright. Headquarters Broadway at 156th Street, New York City. During 1941 the Society published *Focus on Africa* by Richard U. Light, with photographs by Mary Light; *European Possessions in the Caribbean Area* by R. R. Platt, J. K. Wright, J. C. Weaver, and J. E. Fairchild, and four sheets of the *Map of Hispanic America, 1,100,000*, bringing the number to 101 out of a total of 107 sheets. The Charles P. Daly Medal for 1941 was awarded to Dr. Julio Garza Nieto, Director of the Office of Longitudes, Republic of Colombia.

Geographical Society, Royal, founded in 1830 for the advancement of geographical science. Membership circa 6,000. President Sir George Clerk. Secretary Arthur R. Hinks. Headquarters Royal Geographical Society, Kensington Grove, London, S.W. 7. The Founder's Medal was awarded in 1941 to Major P. A. Clayton, the Patron's Medal to Dr. Isaiah Bowman. The Society publishes the monthly *Geographical Journal*, technical publications, and maps.

Geographic Society, The National, founded in 1888 for the increase and diffusion of geographic knowledge. Membership 1,175,000. President Gilbert Grosvenor. Secretary George W. Hutchinson. Headquarters 1146 Sixteenth Street, Washington, D.C. During the year The Society cooperated for the third season with the Smithsonian Institution in sending an archeological expedition to Mexico. Under the leadership of Matthew W. Stirling, the party in 1939 discovered a monument in Veracruz inscribed with the New World's oldest recorded date, 291 B.C. (Spinden correlation), in 1940 five colossal pre-Columbian sculptured heads were excavated, and in 1941 the finest and largest cache of jade artifacts—782 specimens—yet found in America was uncovered. The Franklin L. Burr Prize was given to Mr. Stirling and Mrs. Marion I. Stirling for their explorations. Mrs. Stirling served as The Society's field secretary during the expeditions. The prize carried an award of \$500 to each of the recipients. A Society grant to Mr. and Mrs. William Albee enabled them to study and photograph the animal life in the Sierra Nevada Mountains of California. Geographic investigations made outside of the United States included those of W. Robert Moore in the Union of South Africa, Dr. Maynard Owen Williams in India, and Harrison Howell Walker in Australia. In addition to its official publication, the *National Geographic Magazine*, the Society prepared a scientific monograph on the findings made by the National Geographic Society-National Bureau of Standards Solar Eclipse Expedition to Patos, Brazil, in 1940.

German-American Bund. See FASCISM.

Gideons, The, International, founded in 1899 to advance the placing of Bibles in hotels, hospitals, penal institutions, and public schools. Membership about 10,000. President A. E. Lewis. Secretary Nellie F. Dewar. Headquarters 202 South State Street, Chicago. During 1942 the organization distributed Testaments to the armed forces. The 1942 International Convention is scheduled for Cleveland, July 23-26.

Girl Scouts, Inc., founded in 1912 to help girls develop as good citizens and resourceful people through group self-government and activities in the following fields: homemaking, arts and crafts, nature, the out-of-doors, literature and dramatics, community life, international friendship, sports and games, health and safety, music and dancing, and vocational exploration. Membership 664,776. President, Mrs. Alan H. Means. National Director, Mrs. Paul Rittenhouse. Headquarters 155 East 44 Street, New York City. Girl Scout Anniversary Week was celebrated Mar. 12-18, 1941, and Girl Scout Week, Oct. 26-Nov. 1, 1941. Held to foster inter-American friendship, the Second Western Hemisphere Encampment, Aug. 11-25, 1941, was attended by 160 delegates from 16 countries. Girl Scouts of all ages throughout the country put special emphasis on service in 1941. In the fall, the organization launched a special program of civilian defense training, Senior Service Scouting, for girls from 15 to 18. Girls qualified for the Service insignia by becoming First Aiders and demonstrating a number of practical skills. After becoming Service Scouts, they went on to specialize in one of four fields: child care, food; transportation and communication; clothing, shelter and recreation. The next national convention will be held in October, 1943.

Governors' Conference. See under *State Governments* below.

Grange, The National, an Order formed in 1867 to give to the American farmer better social and educational opportunities, economic betterment, and higher spiritual and

patriotic idealism. Membership 800,000 in 8,000 subordinate Granges. Master Albert S. Goss. Secretary Harry A. Caton. Headquarters, 1343 H St., N.W., Washington, D.C. The National Grange Session will convene at Worcester, Mass. in 1942.

Greek War Relief Association, Inc., organized in 1940 to collect funds in America for the civilian population in Greece. Membership 61. Honorary National Chairman Harold S. Vanderbilt. National Chairman Most Rev. Athenagoras. National Secretary K. P. Taolanos. Headquarters 730 Fifth Avenue, New York City. During 1941 a nation-wide radio program was broadcast, "America Calling." Rosicrucian Order, The (AMOEC), a non-sectarian fraternity. Membership, 60,000. Imperator and President, Ralph M. Lewis. Secretary-Treasurer, Cecil A. Poole. Headquarters, Rosicrucian Park, San Jose, Calif. During 1941 the facilities of the organization were made available for national defense, and special membership privileges were extended to members in the armed service and in various parts of the British Empire. The 1942 International Convention is to be held at headquarters July 12-18.

Rotary International, a world-wide organization which serves as a clearing house of ideas and experiences for all Rotary clubs. A Rotary club is a group of represen-

tative men in a community, one from each business or profession, who gather to further the ideal of service in business and community life. The first Rotary club was organized 1905. There are now 5,082 Rotary clubs in more than 50 geographical regions of the world with a membership in excess of 211,000. Secretary: Chesley R. Perry. Headquarters, Chicago, Ill.; additional offices in London, England; Zurich, Switzerland; and Bombay, India. During 1941, community "Institutes of International Understanding" were sponsored by 200 Rotary clubs in the U.S.A., and 14 weekly radio programs called "The Americas Speak," were presented by Rotary clubs of Latin America as a contribution to friendship and understanding. In addition to usual activities, Rotary clubs throughout the world engaged in the alleviation of war suffering and in emergency national service activities. The 32nd annual convention of Rotary International was held in Denver, Colo., June 15-20, 1941. The official magazine is *The Rotarian* which has a Spanish edition, *Revista Rotaria*. In addition there are 15 regional Rotary magazines published throughout the world in 12 languages. The 1942 convention of Rotary International will be held in Toronto, Canada, June 21-25.

Royal Geographical Society, listed under *Geographical*. **Royal Institution of Great Britain**, founded in 1799 for the promotion, diffusion, and extension of science and useful knowledge. Membership, about 900. President, The Right Hon. Lord Eustace Percy. Secretary: Maj. Charles E. S. Phillips. Headquarters: 21 Albemarle Street, London, W. 1.

Royal Society, founded in 1662 for improving natural knowledge. Membership: 454 Fellows and 47 Foreign Members. President, Sir Henry Dale. Treasurer, Mr. T. R. Merton. Secretaries, Professor A. V. Hill and Professor A. C. G. Egerton. Foreign Secretary: Sir Henry Tizard. Headquarters: Burlington House, London, W. 1. Awards were made during 1941 as follows: Copley Medal to Thomas Lewis, Royal Medals to E. A. Milne and E. L. Kennaway, Davy Medal to H. D. Dakin, and Hughes Medal to N. F. Mott. The Ferrier Lecture was delivered by Professor F. O. Bartlett on 29 May 1941; the Bakeman Lecture by Professor P. A. M. Dirac on June 19, 1941, and the Croonian Lecture by Professor W. W. C. Topley on July 17, 1941. Seven Ordinary Meetings were held during the year. The Anniversary Meeting was held on December 1, 1941.

Russian War Relief, Inc., founded in September, 1941, to furnish aid and assistance for relief of human suffering in the U.S.S.R. and among refugees from the U.S.S.R. Membership: 23 Board of Directors. President of the Board Edward C. Carter. Secretary: Harriet Moore. Headquarters: 535 Fifth Avenue, New York City. The important happening of 1941 was the launching of the campaign at Madison Square Garden, New York City, October 27.

Safety Council, National, founded in 1913 to bring about understanding of the steps necessary to prevent accidents of all kinds and to furnish its members with printed material and information for use in conducting accident prevention work. Membership, 5,375, mainly companies and associations. President, Col. John Stulwell. Managing Director W. H. Cameron. Headquarters: 20 N. Wacker Drive, Chicago, Ill. The prevention of accidents as an aid to defense has been stressed by the Council during 1940 and 1941. On Aug. 18, 1941, President Roosevelt issued a proclamation calling attention to the increased accidental death rates. Declaring that, "Accidents hinder national defense," he called upon the National Safety Council to mobilize its nation-wide resources in leading a concerted campaign against accidents, and upon every citizen to enlist in this campaign. The Council called together 130 national associations to cooperate in this campaign. It intensified its own activities in traffic and industrial safety. Special publications, films, and posters were produced and special studies made on several aspects of traffic and industrial safety as they are affected by and as they affect the war effort. The Council published six magazines and hundreds of studies on accident prevention methods. It distributed 5½ million safety posters in 1941 for use in industry, in schools and public places. It conducted many national safety contests among various groups and issued hundreds of awards. The National Safety Congress, attended by several thousands of delegates, meets annually in October. The 31st annual Congress will be held in Chicago, Oct. 5-9, 1942. See ACCIDENTS.

Savings and Loan League, United States, a trade organization founded in 1892 by the savings, building, and loan associations of the United States, whose assets total \$6,000,000,000 and whose chief business is the lending of money to finance home ownership. Membership: 3,700 associations and 47 affiliated State leagues. President: Fernor S. Cannon. Secretary: H. F. Cellarius. Headquarters: 221 N. La Salle Street, Chicago, Ill. At the annual convention in Miami, December 1-5, 1941, the Associations urged all component units to participate in Defense Bond distribution, stand 100 per cent back of the nation's foreign policy, and urged preference for home-owners in building materials priorities. The League published the 11th of its series of year books, *Savings and Loan Annals 1940*. The year 1941 represented the

second billion-dollar lending year for the Association since 1930.

Scandinavian Foundation, American, founded in 1911 to assist cultural relations between America and the Scandinavian countries. President: Henry Goddard Leach. Headquarters, 116 East 64 Street, New York City.

Science, American and British Associations for the Advancement of, listed under *Advancement*.

Sculpture Society, National, founded in 1893 to advance the knowledge, creation, and appreciation of good sculpture by annual exhibitions and other means. Membership, 280. President, Paul Manship. Secretary Mrs. Margaret French Crosson. Headquarters, 115 East 40 Street, New York City. The Exhibition of Enlarged Photographs was held at The Architectural League, May 13-24, 1941, and later sent out as a Traveling Exhibition. The Annual Bas Relief Exhibition was also held at the League from May 13 to 24, 1941. A prize was awarded to Walker Hancock for his winning design. The medal of Honor was awarded posthumously to Mr. Dwight James Baum.

Seeing Eye, The, a philanthropic organization founded in 1929 to furnish dogs as guides to blind persons. Membership: 14,413. President: Henry A. Colgate. Treasurer: Herman J. Cook. Mrs. Harrison Eustis, founder, is the Honorary President. The organization maintains a school at Morristown, N.J. where dogs are trained, separately for three months and with their blind masters for a period of one month. During the fiscal year ending Sept. 30, 1940, 143 blind men and women were graduated with their educated dogs, 448 applicants were investigated, and 130 were accepted for classes during the succeeding year. Approximately 625 persons now use Seeing Eye dogs. The maximum cost to the blind person is \$150 although the actual cost of training the dog is many times that amount.

Silver Suits. See UNITED STATES under *Unity*.

Small Business Men's Association, Inc., National, organized in 1937 as a means of giving small business men a voice in national affairs. President: Monroe Shakespeare. Vice President: Wilbur Jones. Secretary: James S. Westbrook. Headquarters: Akron, Ohio. The 1941 meeting was held in May at the Palmer House, Chicago.

Social Democratic Federation. See SOCIALISM.

Social Hygiene Association, American, formed in 1914 to combat syphilis and gonorrhea, to fight prostitution and other unwholesome conditions, to promote sound sex education and training for marriage and parenthood, and to protect and improve the American family as the basic social institution. Membership, 147 organizations, approximately 10,000 individuals. President: Dr. Ray Lyman Wilbur. Executive Director: Dr. Walter Clarke. Headquarters: 1790 Broadway, New York City. Services include advice and consultation, surveys, distribution of literature, films, and other materials. During 1941 the 5th National Social Hygiene Day was sponsored with more than 5,000 meetings throughout the country. The William Freeman Snow medal for distinguished service in the social hygiene field was presented to Mrs. Sybil Neville-Rolfe, London. Three new sound films, *In Defense of the Nation*, *Plain Facts*, *With These Weapons*, were produced and distributed. The Association prepared a *Summary of State Legislation Requiring Prenatal and Prenatal Examination Laws for Syphilis*, *Digest of State and Federal Laws Dealing with Sex Offenses*, and revised the *Digest of Laws and Regulations Relating to the prevention and control of Syphilis and Gonorrhea*. Regional conferences are scheduled for Boston, Cincinnati, Oklahoma City, and New York in February, 1942.

Social Science, Henry George School of, listed under *Henry George*.

Social Sciences, National Institute of, incorporated in 1899 to reward distinguished services rendered to humanity. Membership, 550. Secretary: Miss Rosina Hahn. Headquarters: 271 Madison Avenue, New York City. At the annual dinner, May 15, 1941, in New York City, gold medals were awarded to Hon. Norman H. Davis, Mrs. J. Borden Harriman, and Hon. Alfred E. Smith. The 1942 annual meeting was scheduled in New York City, February 6th.

Social Security, American Association for, founded in 1927 for the promotion of social security and social insurance in the United States. Membership: 4,000. President: Bishop Francis J. McConnell. Executive Secretary: Abraham Epstein. Headquarters: 22 East 17 Street, New York City. During 1941 the Association continued its fight for an improved unemployment insurance system and the inauguration of health insurance in the different States. It led the fight against the Treasury attempt to use social security taxes for defense purposes, and organized a committee of leading students and administrators of social security to restudy the problems of social security in the post-war economy. The 1942 National Conference on Social Security is to be held in April in New York City.

Social Work, National Conference of, founded in 1873 to facilitate discussion of the problems and methods of practical human improvement, to increase the efficiency of organizations devoted to this cause, and to disseminate information. It does not formulate platforms. Membership: 6,000. President: Shelby M. Harrison. General Secretary: Howard R. Knight. Headquarters: 82 N. High

Street, Columbus, Ohio The 1942 meeting will be held in New Orleans, La. See BIRTH CONTROL

Social Workers, American Association of, founded in 1921 to formulate and establish standards of personnel and of conditions under which social work is practiced, to disseminate information concerning the profession, and to conduct investigations which contribute to an understanding of social welfare needs. Membership, 11,250. President Wayne McMillen. Executive Secretary: Walter West. Headquarters, 180 East 22 Street, New York City. A survey of relief conditions in the United States was published in May, 1941. The 1942 Delegate Conference will be held in New Orleans in May.

Sociological Society, The American, founded in 1905 to encourage sociological research, discussion, teaching, and publication. Membership, 1,032. President Dwight Sanderson. Secretary, Conrad Tæuber. Headquarters, U.S. Department of Agriculture, Washington, D.C. The Society issues the bi-monthly journal, the *American Sociological Review*.

Special Libraries Association, organized in 1909, incorporated in 1928, to serve all those who are aware of the ever-increasing importance of knowing what information is available and how to secure it, to act as a clearinghouse of information, and to further professional progress. Membership, 2,600. President, Laura A. Woodward. Secretary, Mrs. Kathleen B. Stebbins. Headquarters, 31 East 10 Street, New York City. Publications of 1941 were: *Trade-names Index; World War II, A Bibliography; Creation and Development of an Insurance Library; Directory of Microfilm Sources*, and *Special Library Resources*, a survey of the data in 765 libraries throughout the United States and Canada.

Standards Association, American. See HEATING AND VENTILATING, PHOTOGRAPHY under *Physical Measurements*

State Governments, The Council of, founded in 1925 by the States to encourage cooperation among them, to make State government more effective, and to serve as a clearinghouse of information for public officials. It is also the secretariat of the Governors' Conference, the American Legislators' Association, the National Association of Attorneys General, the National Association of Secretaries of State, and the National Conference of Commissioners on Uniform State Laws. Membership, 44 States. President, Gov. Harold E. Stassen. Executive Director, Frank Bane. Headquarters, 1313 East 60 Street, Chicago, Ill. The Council participates in the work of the International Board of Inquiry for Great Lakes Fisheries, set up Feb. 29, 1940, and cooperates with various national defense agencies and with State Councils of Defense. The Fifth General Assembly met in Washington, Jan. 21-24, 1941.

Statistical Association, American, founded in 1839 as a scientific and educational organization of persons seriously interested in the application of statistical methods to practical problems, the development of more useful methods, and the improvement of basic statistical data. Membership, 3,150. President, Dr. Alfred J. Lotka. Secretary, R. L. Funkhouser. Headquarters, 1629 K Street, N.W., Washington, D.C.

Student Federation of America, National, founded in 1925 to achieve a spirit of cooperation among students in the United States to give consideration to questions affecting student interests, to develop and vigorously express an intelligent student opinion on questions of national and international importance, to further an enduring peace, and to create and endeavor to execute a program for the youth of America on vital problems. The Federation acts independently of any political party or religious sect. Membership, Student councils of about 125 colleges and universities. President, Elizabeth Robertson. Headquarters, 1410 H Street, N.W., Washington, D.C. The 17th annual congress was held December 27-31, 1941, at the University of Minnesota, Minneapolis.

Student Service, International (I.S.S.), founded in 1920 to provide the student with opportunity for action without losing sight of his responsibility for objective and thorough study. It is not a membership organization. (Chairman of the Executive Committee, Alvin Johnson. General Secretary, Joseph P. Lash. Headquarters, 8 West 40 Street, New York City. In addition to its traditional work of aiding student refugees, the I.S.S. services include the organization of intercollegiate conferences, a Washington Student Service Bureau, a publication, *Threshold*, a Summer Student Leadership Institute at Campobello, and voluntary work camps. Meetings scheduled for 1942 include conferences at the universities of North Carolina and Washington, and at Wellesley College.)

Student Union, American, founded in 1935 to "Make the Campus a Fortress of Democracy." Membership, 17,000. Chairman: Richard Bancroft. Executive Secretary, Herbert Witt. Headquarters, 230 Fifth Avenue, New York City. Events of 1941 included two summer institutes, a meeting series on "The Axis Threat to Education" sponsored by chapters in fifty colleges, and the Seventh National Convention. The Eighth National Convention will be held Christmas week, 1942.

Surgeons, American College of, founded by surgeons of the United States and Canada in 1913 to advance the

science and the ethical and competent practice of surgery, to establish hospital standards, to engage in research, to aid in better instruction of doctors, to formulate standards of medicine, and to improve all adverse conditions surrounding the ill and injured wherever found. Membership, 13,300. President, W. Edward Galle. Secretary, Frederic A. Besley. Chairman of the Board of Regents, Irvin Abell. Headquarters, 40 East Erie Street, Chicago, Ill. Three sectional meetings were held in 1941 in addition to the annual meeting and clinical congress at Boston, November 3-7. Work was carried on by the following departments: Hospital Standardization, Clinical Research, Library and Department of Literary Research, Medical Motion Pictures, and Graduate Training for Surgery. The award for Prize Winning Case Histories was granted to Dr. John Roseberry Orndorff of Chicago.

Surgical Association, American. See MEDICINE AND SURGERY under *Advances in Surgery*

Swedish Historical Museum, American, established in 1926 to promote good citizenship and patriotic purposes among citizens of Swedish origin, and preserve their contributions to American life. Membership, 3,000. Chairman, William L. Butt. Executive Secretary, Elizabeth Z. Swenson. Headquarters, 19th Street and Pattison, Philadelphia. Events of 1941 included lectures by Gunhild Teigen and Tage Palm, exhibitions of William E. Willner, Carl Sandburg, Baron Axel Kinckowstrom, Wiwen Nilsson, Fingal Rosenquist, and Carl Lindborg. In April, 1941, the Museum assumed custody of "The House on Queen Christina's Land-Grant," built early in 1700.

Temperance Groups. See under *Alcoholism, Anti-Saloon League, Woman's Christian Temperance Union*

Testing Materials, American Society for, a technical Society founded in 1898 to promote knowledge of the materials of engineering and to standardize specifications and the methods of testing. Membership, 4,514. President, G. E. F. Lundell. Secretary-Treasurer, C. L. Warwick. Headquarters, 260 S. Broad Street, Philadelphia, Pa. During 1941 the Fifteenth Award of the Charles B. Dudley Medal was made to C. W. MacGregor for his paper on "The Tension Test" presented at the 1940 Annual Meeting. The Second Sanford E. Thompson Award was made to W. T. Thomson for his paper on "A Method of Measuring Thermal Diffusivity and Conductivity of Stone and Concrete." In 1942 the Spring Meeting and Committee Week will be held in Cleveland, Ohio, March 2-6, and the Annual Meeting in Atlantic City, N.J., June 22-26.

Tuberculosis Association, National, founded in 1904 for the study and prevention of tuberculosis. Membership, over 1,600. President, Dr. Bruce H. Douglas. Secretary, Dr. Charles J. Hatfield. Headquarters, 1790 Broadway, New York City. In 1941 the Trudeau Medal was awarded to Dr. John Alexander. The 1942 annual meeting is scheduled to be held in Philadelphia, May 6-9.

United China Relief, Inc., organized in February, 1941, to raise funds for relief and rehabilitation in China. Chairman, James G. Blaine. Executive Director, B. A. Grunsell. Headquarters, 1790 Broadway, New York City. United China Relief is a coordination of the fund-raising activities of eight Participating Agencies: American Bureau for Medical Aid to China, Associated Boards for Christian Colleges in China, American Committee for Chinese War Orphans, China Aid Council, American Friends Service Committee, China Emergency Relief Committee, Church Committee for China Relief, Indusco (American Committee in Aid of Chinese Industrial Cooperatives). See ROMAN CATHOLIC CHURCH

United Service Organizations for National Defense, Inc. (U.S.O.), founded February, 1941, "to serve the spiritual, recreational, welfare, and social needs of the men and women in the armed forces and defense industries of the United States." Membership, 6 member agencies, 60 corporate members (10 from each agency). Chairman of the Board, Walter Hoving. President, Harper Sibley. Secretary, Randall J. LeBoeuf, Jr. Headquarters, 350 Fifth Avenue, New York City. With the incorporation of the organization in the State of New York, Feb. 4, 1941, and the National Campaign instituted, June 3-July 4, operations were begun shortly thereafter, with 536 total operations of which 245 were U.S.O. clubs. Personnel at the end of the year numbered 960. The 1942 meeting of members is scheduled for New York City.

Unity of Science, International Congress for the. See PHILOSOPHY.

University Professors, American Association of, a professional organization of college and university teachers and investigators, founded in 1915 to facilitate more effective cooperation among its members, to promote the interests of higher education and research, and to increase the usefulness and advance the standards and ideals of the profession. The nature of its work is indicated by the titles of the committees, which include Academic Freedom and Tenure, Freedom of Speech, International Relations, Edu-

ational Standards, Author-Publisher Contracts, Professional Ethics, Relation of Junior Colleges to Higher Education, Cooperation with Latin-American Universities, Pensions and Insurance, Preparation and Qualification of Teachers, Encouragement of University Research, Library Service, and the Economic Welfare of the Profession. Membership: about 16,000 President W. T. Laprade. General Secretary, Ralph E. Himstead Headquarters 1155 Sixteenth Street, N.W., Washington, D.C. An annual meeting is held, usually in the last week of December.

Veterans of Foreign Wars of the United States (V.F.W.), founded in 1899 to perpetuate the comradeship formed among men who have borne arms in America's wars and campaigns on foreign soil or in hostile waters, and to continue their patriotic service in behalf of the nations as a whole, of children, and particularly of disabled veterans. Membership about 250,000. Commander-in-Chief: Max Singer Headquarters Broadway at 84th Street, Kansas City, Mo. Increasing emphasis on personal and organization participation in America's national defense program, an all-time high membership record, and sponsorship of a monthly series of programs on the theme "Speak Up for Democracy" over a nationwide network of nearly 450 local radio stations, were among the highlights of the 1940-41 program. Approximately 400,000 members of the V.F.W. and its Ladies Auxiliary, affiliated with 6,000 local units, supported the national program in their respective communities in every state, the District of Columbia, Alaska, the Canal Zone, Philippine Islands, and the Territory of Hawaii. The year culminated in the 42nd annual national encampment Aug 24-29, 1941, at Philadelphia—the largest convention of the V.F.W. and its Auxiliary, since its organization in 1899. "Unity for Victory" was the theme adopted for the ensuing year. A resolution was adopted defining the attitude of the overseas veterans' organization toward the foreign policy of the United States government. In view of the world situation the V.F.W. went on record as "wholeheartedly endorsing and supporting those measures taken by the Government of the United States of America to defend and perpetuate the American way of life from any and all aggressors." At 11 00 a.m. on the 11th day of each month, commemorating the World War Armistice of Nov 11, 1918, V.F.W.-sponsored speakers present a 15 minute radio program designed to tell the American people what democracy is, and what they can do personally to defend it. As of Oct 11, 1941, the program was being broadcast monthly over a nationwide network of 434 stations. Other programs included the sponsorship of the sixth annual high school Americanism essay contest in which approximately 150,000 girls and boys throughout the country were entered. Legislative achievements of the year sponsored by the V.F.W. included Public Law No 775, which provides for the entire personnel of the Naval Reserve or Marine Corps Reserve pensions and other benefits as now provided for the personnel of the regular Navy or Marine Corps, in case of disability or death in line of duty, an amendment to the Selective Service and Training Act which granted the same pay and allowances to enlisted men of the Navy as it provided for enlisted men in similar grades in the Army and Marine Corps, Public Law No 801 which, among other provisions, extended credit for military service rendered during time of any war, for railroad employees' retirement purposes; Public Law No 142 eliminating the former "relative needs test" and granting actual veteran preference on WPA employment projects. The 43rd National Encampment will be held in Detroit, August 23-28.

Veterinary Medical Association, American, founded in 1863 to promote veterinary science and its proper application. Membership 7,000. President H. W. Jakeman Secretary J. G. Hardenbergh Headquarters 600 South Michigan Avenue, Chicago, Ill. The International Veterinary Congress prize for outstanding research was awarded in 1941 to Dr. Adolph Eichorn, Animal Disease Station, Beltsville, Md. The 1941 meeting was held in Indianapolis, Ind. The 1942 meeting is scheduled for August 17-21, at San Francisco, Calif.

Vocational Association, Inc., American, founded in 1925 with the conviction that occupational education is a primary right and privilege of every citizen. Membership: 25,711. President L. R. Humphreys Executive Secretary L. H. Dennis Headquarters 1010 Vermont Avenue, N.W., Washington, D.C. During 1941 the Association gave organized assistance to the effective development of vocational training for national defense industries. Over a million and half persons were trained for occupations in defense industries in the last year and thousands are in training at the year's end. The annual convention was held in Boston, Mass., in December, 1941.

Vocational Guidance Association, Inc., National, founded in 1913 to unite persons engaged or interested in any phase of vocational guidance and occupational adjustment. Membership 3,300. President George E. Hutcherson Executive Secretary Clarence W. Falor. National Headquarters 425 West 123rd Street, New York City. Official journal *Occupations*, the Vocational Guidance Magazine, published monthly October to May. The organization carries on its work through 63 branches located in 31 states, two territories, and a Canadian province, national committees specializing in various phases of

vocational guidance, regional conferences; and a national convention held at Atlantic City, N.J., in February, 1941, and scheduled for San Francisco, Calif., Feb. 18-20, 1942.

Volunteer Rescue Army, See PHILANTHROPY.

Weights and Measures, American Institute of, founded in 1916 to defend the English system of weights and measures against pro-metric propaganda. Membership. 85 corporations. President W. R. Ingalls Secretary Robert F. Cogswell. Headquarters 33 Rector Street, New York City.

Wildlife Institute, American, an educational and scientific organization for the restoration of North American wildlife, founded in 1935. President Frederic C. Walcott Secretary J. Paul Miller Headquarters 822 Investment Building, Washington, D.C. The Institute maintains ten cooperative game management and wildlife research units in different States. Activities during 1941 included waterfowl investigations at Delta, Man, Canada, bass stream improvement in Indiana, initiation of a study of the Atlantic salmon on the Denny's River, Maine, and publication of the results of study on fish predators. Educational activities included series of dramatized radio programs especially adapted for school use on more than 100 stations throughout the country and publication of several educational booklets, including *Life for Wildlife*, a *Teaching Aid*, and *Wild Ducks*. The Seventh North American Wildlife Conference will be held Apr 8, 9, and 10, 1942, at Toronto, Canada.

Woman Geographers, The Society of, organized in 1925 to form a medium of contact between women engaged in geographical work and its allied arts and sciences; to further geographical work in all its branches; to spread geographical knowledge, and to encourage geographical research. Membership 300. President Frances Carpenter Huntington Treasurer Helen M. Strong Headquarters 232 Barr Building, Washington, D.C. Meetings of the Society's groups are held in New York City, Chicago, and Washington, D.C.

Woman's Christian Temperance Union, National (W.C.T.U.), founded in 1874 to unite the Christian women of the United States for the education of public sentiment to total abstinence from the use of all alcoholic liquors, and to train the young in habits of sobriety. Membership about 500,000. President Mrs. Ida B. Wise Smith Secretary Mrs. Anna Marden DeYo Headquarters 1730 Chicago Avenue, Evanston, Ill. Four special issues of *The Union Signal*, a weekly magazine with circulation in 54 countries of the world, will be devoted to expositions of the Quarterly Temperance Sunday School lessons in March, June, September, October, 1942. These will be invaluable to church workers. Much emphasis is being placed in support of Senate Bill 860, intended to "Defend Our Defenders" by affording the same protection from beverage alcohol that was given to the men in the first World War. The 1942 convention will be held September 25-29 in Birmingham, Alabama. See LIQUOR PRODUCTION.

Women Artists, Inc., National Association of, founded in 1889 to exhibit and display works of art by contemporary artists. Membership 800. President Bianca Todd Executive Secretary Josephine Droegge Headquarters the Argent Galleries, which the Association maintains, 42 West 57 Street, New York City. The Association sponsors an Annual Exhibition, at which a number of prizes are awarded, general exhibitions, rotary shows, a sketch class, lectures, etc. The annual open meeting is held at the headquarters the second Wednesday in April.

Women's Clubs, General Federation of, founded in 1890 to bring into communication with one another the various women's clubs throughout the world. Membership 2,000,000 in 16,500 clubs. President Mrs. John L. Whitehurst, Headquarters 1734 N Street, N.W., Washington, D.C. An "all out" national defense program was instituted by the new president in May, 1941. A newly created department of National Defense was composed of 14 committees carrying on active programs: Agriculture, Americanization, Aviation, Conservation, Consumer Problems, Housing, Library, Nursing, Nutrition, Organization, Recreation, Registration, U.S. Stamps and Bonds. Seven other departments have programs keyed to National Defense, they are American Citizenship, American Home, Fine Arts, International Relations, Junior Club Women, Legislation and Public Welfare. At a meeting of representatives of 100 leading national organizations of women held in the spring of 1941, the Federation's National Defense program was accepted as a working basis. A series of forums on national defense subjects with high government officials and Army and Navy officers, will be held Jan 23-26, 1942, as a feature of the annual mid-winter meeting of the Board of Directors. Annual convention of the Federation will be held in Fort Worth, Texas, April 27-May 2, 1942, which will be followed by a good-will trip to Mexico, where forums on education, welfare and defense will be held by Mexican and American women.

Women Voters, National League of, established in 1920 to promote political education through active participation of citizens in government. Membership 32 affiliated State Leagues and 590 local Leagues. President Miss Marguerite M. Wells Secretary Mrs. D. Bailey Calvin Headquarters 726 Jackson Place, Washington, D.C. A biennial convention is to be held in Chicago in April, 1942.

World Alliance for International Friendship through the Churches, founded in 1914 to promote international goodwill and peace. Membership: about 1,000. President: Rt. Rev. G. Ashton Oldham. General Secretary: Henry A. Atkinson. Headquarters. 70 Fifth Avenue, New York City. The organization published in 1941 a monthly *News Letter*; eight special issues of the *News Letter* (a) *American Plans for World Order* (b) *Pan Americanism and the Local Church* (c) *A Just and Lasting Peace for Asia* (d) *Religious Work for Army Camps* (e) *Official Peace Aims* (f) *Peace Aims of the Churches* (g) *Peace Aims (Church Peace Union Statement)* (h) *World Alliance Message and Program; To Build A Better World; and International Problems for Religious Young People*.

World Peace Foundation, established in 1910 to promote international order and peace through publications, study groups, and a reference service. It has no membership other than the 15 Trustees. President: George H. Blakelee. Director: S. Shepard Jones. Headquarters: 40 Mt. Vernon Street, Boston, Mass. The Foundation published in 1941 Volume II of *Documents on American Foreign Relations, The China of Chiang K'ai-shek and the following titles in its America Looks Ahead Series: Australia and the U.S., Canada and the U.S., Economic Defense of Latin America, Dependent Areas in the Post-War World and Argentina and the U.S.* Various round table discussions were held on American foreign policy.

Young Men's Christian Associations, The National Council of (Y.M.C.A.), formed as a national committee in 1866. The first local organization was formed in London in 1844 (in the United States in 1851) for the physical, mental, social, moral, and religious education of youth. Membership 1,224,410 in 1,292 local associations. President: Frank A. Bayley. General Secretary: Eugene E. Barnett. Headquarters: 347 Madison Avenue, New York City. Major emphasis in 1941 included service to young men in military and related defense service as one of six agencies composing the United Service Organizations for National Defense, with responsibility for operating approximately 140 clubs and centers, in addition to extending regular facilities everywhere. Also expanded greatly needed service among four million prisoners of war, through World's Alliance at Geneva, and continued fifty-year-old program of international cooperation in thirty countries. Important meetings were the Sixth North American Assembly of Y.M.C.A. Workers with Boys at Louisville, Kentucky, the National Physical Education Convention at Berea College, the International Conference on Basic Membership Policies at Silver; the 24th Conference on Industrial Relations at Detroit Bay, and special institutes for foremen and transportation workers. Other emphases included citizenship and public affairs, national uniform membership and program reporting, and public relations. Plans were laid by the National Council for the Centennial celebration of the founding of the Y.M.C.A. in London in 1844.

Young Women's Christian Associations of the United States of America (Y.W.C.A.), established in 1906 to advance the physical, social, intellectual, and spiritual interests of young women. Membership: about 590,000. President: Mrs. Henry A. Ingraham. General Secretary: Miss Emma P. Hirth. Headquarters: 600 Lexington Avenue, New York City. In April 1941, a nation-wide broadcast from Washington, D.C. marked the close of a series of celebrations in observance of the 60th anniversary of the Girl Reserves (younger girls) in the Y.W.C.A. In April, also, a luncheon in honor of Lady Halifax, former president of the British Y.W.C.A. War Time Appeal, took place at the Waldorf-Astoria in New York City, with an attendance of 2,500. In 1941, nearly 8,000,000 women and girls had some share in the program carried on by the Y.W.C.A. in the United States in its 1,472 local centers. In addition to its regular program of service to women and girls, the Y.W.C.A. took responsibility, as one of the agencies in the United Service Organizations for National Defense, Inc., for helping to meet the needs of women and girls affected by camp concentrations and defense industries. Its activities on behalf of refugees arriving from abroad were also continued, and Associations in other countries were aided by grants of money, raised through the Y.W.C.A. World Emergency Fund, in meeting the many emergency needs created by the war.

Youth Commission, American, formed in 1935 by the American Council on Education to investigate the problems of and develop a comprehensive program for the care and education of youth. Membership: 16. Chairman: Owen D. Young. Director: Floyd W. Reeves. Headquarters: 744 Jackson Place, Washington, D.C. During 1941 the Commission wrote its general report. Recommendations were made for next steps in national policy for youth. Publications of the year were in the fields of personality development of Negro youth, work camps for college and high school students, public youth work programs, education in family living, recreation and leisure, and youth serving organizations. Forthcoming publications include staff reports on youth in the OCC camps, definitive findings in Negro youth problems, and youth employment and unemployment. See EDUCATION under *Youth Unemployment*; YOUTH MOVEMENT.

Youth Congress, American, established in 1934 to serve as a cooperating center and a clearinghouse for all

youth and youth-serving organizations. Membership: organizations estimated to reach 4,500,000 young people. Chairman: Jack McMichael. Executive Secretary: Frances M. Williams. Headquarters: 230 Fifth Avenue, New York City. The Seventh Annual American Youth Congress was held at Philadelphia, July 8-6, 1941. A National Town Meeting of Youth was held in February, 1941, at Washington, D.C.

Youth Correction Authority. See PRISONS, PAROLE, AND CRIME.

Zionist Organization of America, founded in 1897 to enlist public support for the upbuilding of a Jewish national homeland in Palestine and to foster a program of Jewish renaissance. Membership: 50,000. President: Judge Louis E. Levinthal. Executive Director: Simon Shetzer. Headquarters: 1720-16th Street, N.W., Washington, D.C. The destruction of European Jewish communities thrust upon the American Zionist Organization the sole responsibility for continuing the upbuilding of the Holyland.

Zionist Organization of America, Women's, listed under *Hadassah*.

Zonta International, a classified service club for women executives, organized in 1919 to encourage high ethical standards in business and to improve the legal, professional, economic, and political status of women. Membership: about 4,500. President: Mrs. May Moyers McElroy. Executive Secretary: Miss Harriet C. Richards. Headquarters: 59 E. Van Buren Street, Chicago, Ill. A new district was organized in 1940—District 5, comprising the States of Texas, Oklahoma, Arkansas, and Louisiana. The 20th Annual Convention was held at Estes Park, Colo., in June, and Zonta Week was observed November 3-8. The annual \$500 Amelia Earhart Scholarship for post-graduate study in aeronautics was awarded in 1941 to Miss Mildred W. Boyden, a graduate student at the University of Chicago. The 1942 convention will be held at Toronto, Canada, June 29-July 2.

Area and Population. The area by provinces and the population by provinces and racial composition as officially estimated for June 30, 1940, are shown in the accompanying table.

SOUTH AFRICA: AREA AND POPULATION
[Estimated, June 30, 1940]

Province	Area, sq miles	Europeans	Bantus	Asiatics & mixed
Cape of Good Hope	277,169*	827,600	2,157,400	748,300
Natal	35,284	201,900	1,668,300	215,400
Transvaal	110,450	922,200	2,708,700	83,000
Orange Free State	49,647	201,000	589,700	17,700
Total	472,550	2,152,700	7,124,100	1,064,400

* Including Walvis Bay (430 sq. miles).

The census population of May 5, 1936, totaled 9,589,898 (European, 2,003,857; non-European, 7,586,041), as compared with a total estimated population of 10,341,200 (European, 2,152,700; non-European, 8,188,500) on June 30, 1940. European births registered in 1939 numbered 53,805 (25.4 per 1,000); deaths, 19,846 (9.4 per 1,000). Populations of the chief cities, including suburbs, at the 1936 census were, with the number of Europeans in parentheses: Johannesburg, 519,384 (257,671); Cape Town, 344,233 (173,412); Durban, 259,608 (95,033); Pretoria, 128,621 (76,935); Port Elizabeth, 109,841 (53,461); Germiston, 79,440 (32,564); East London, 60,563 (31,311); Bloemfontein, 64,233 (30,291). The same census showed

that the home language of 1,120,770 persons (55.93 per cent of the European population) was Afrikaans, 783,071 (39.08 per cent) English, 50,411 (2.52 per cent) English and Afrikaans, 17,810 German, and 17,684 Yiddish.

Defense. According to an official Washington estimate, the active army on Jan. 1, 1941, totaled 9,000 officers and men; trained reserves, 17,000; active air force, 2,000. Membership in rifle associations in 1939 was about 124,100. Defense estimates for 1940-41 totaled £28,000,000. The naval establishment is restricted to two mine-sweeping trawlers and other auxiliary craft. Also see *History*.

Education and Religion. State-conducted and State-aided public schools numbered 4,278 in 1938 for pupils of European stock and 5,001 for others; pupils numbered, respectively, 386,880 and 589,308. Normal expenditures of these schools, 1938, £9,898,216 (South African pounds). At Cape Town, Stellenbosch, Witwatersrand, and Pretoria are four universities; that at Pretoria, the University of South Africa, conducts five colleges in different parts of the Union. Universities' students numbered, in 1938, 9,492. According to the census of 1936 the religious affiliations of people of European descent were chiefly: Dutch churches, 1,088,826; Anglican, 345,103; Presbyterian, 82,283; Methodist, 140,658; Roman Catholic, 92,352; Jewish, 90,662.

Production. Agriculture, mining, and manufacturing are the leading occupations. Gold production, the largest single source of wealth, reached the record level of 14,037,741 oz. valued at £117,897,024 in 1940 (12,819,344 oz. valued at £95,326,919 in 1939). Output of other minerals in 1940 was (in short tons): Coal, 18,933,764; chromite, 180,390; copper, including gold concentrates, 19,804; iron ore, 704,113; manganese ore, 454,233; pyrites, 40,456; asbestos, 27,392; magnesite, 13,098; corundum, 4,211. The 1940 platinum production was 70,272 oz.; diamonds, 1,249,828 carats valued at £2,604,172 in 1939 (exports in 1940 were 396,519 carats worth £2,331,267).

Production of the chief crops in 1939-40 was (in metric tons): Wheat, 416,700; rye, 18,900; oats, 80,700; corn, 1,824,700; barley, 25,800 in 1937-38. Other important crops are potatoes, citrus fruits, tobacco, tea, and sugar cane. Livestock in 1938 included 32,861,077 sheep, 11,578,527 cattle, 6,193,084 goats, and 777,590 horses (1937). The 1939-40 wool clip was 793,415 bales. Trawl-caught fish declined from 40,131,519 lb. in 1938 to 20,464,378 in 1940 due to requisitioning of trawlers for mine-sweeping. The census of 1937-38 showed 10,234 industrial establishments, which paid wages of £45,000,000 to 348,520 employees (including 143,760 Europeans).

Foreign Trade. Imports in 1940 totaled £105,099,234 (£91,341,108 in 1939); exports, excluding gold, £34,090,637 (£34,196,010 in 1939). Figures are in South African currency. The United Kingdom supplied 37.6 per cent of the 1940 imports and took 57.3 per cent of the exports (excluding gold); the United States supplied 25 per cent and took 12.3 per cent. Trade with the British Empire accounted for 56.1 per cent of all 1940 imports and 77.6 per cent of the exports.

Finance. The Union's draft budget for the fiscal year ended Mar. 31, 1942, estimated receipts at £73,640,000 and expenditures at £130,949,000, of which £57,309,000 was to come from the loan fund. In the three war budgets of 1940-41, revenues were estimated at £59,377,000 and expenditures at £128,047,206. Defense costs soared from £14,000,000 in the original 1940-41 budget and

£60,000,000 in the supplementary 1940-41 budgets to £72,000,000 in 1941-42. South Africa entered the war in a strong financial position. During 1940-41 the funded external sterling debt was reduced by an additional £7,960,000, while three internal loans yielded £29,180,000 from public subscriptions. The gross public debt rose from £278,876,359 on Mar. 31, 1939, to about £363,000,000 on July 31, 1941. The average exchange rate of the South African pound was \$4.4017 in 1939, and \$3 98 in 1940 and 1941.

Transportation. In September, 1941, 13,925 miles of railway lines were being operated by the government-owned South African Railways. During 1940 they carried 120,282,087 passengers and 28,834,557 tons of revenue and nonrevenue freight. The highway mileage in 1940 was 92,143 (see *ROADS AND STREETS*). The government-operated air lines in 1939 carried 35,578 passengers and 2,640,984 lb. of freight and mails. During 1941 new routes opened by this system connected Johannesburg with Loanda (Angola), via Cape Town, Windhoek (South-West Africa), Mosamedes (Angola) and Lobito (Angola), and with Leopoldville (Belgian Congo), via Bulawayo (Southern Rhodesia), Lusaka (Northern Rhodesia), Dadoma (Tanganyika), Nairobi (Kenya), Entebbe (Uganda), and Stanleyville (Belgian Congo). During 1939, 2,205 overseas vessels of 9,729,873 net registered tons entered Union harbors and landed 4,838,235 tons of cargo.

Government. Executive power is exercised by the Governor General, appointed by the King on recommendation of the South African Government, and by the Executive Council (Cabinet), which is responsible to Parliament. Parliament consists of a Senate of 44 members serving 10-year terms (8 appointed by the Governor General and 36 elected) and a House of Assembly of 152 members, elected by white male and female suffrage for five years unless sooner dissolved. Governor General in 1941, Sir Patrick Duncan (assumed office March, 1937).

The United Party, which had controlled the Government since 1933, split on Sept 5, 1939, when Prime Minister J. B. M. Hertzog's neutrality policy was opposed by Gen. J. C. Smuts, then Deputy Prime Minister, and defeated in the House of Assembly, 80 to 67. Prime Minister Hertzog resigned when the Governor General refused his request for the dissolution of Parliament and new elections. General Smuts formed a new Government Sept. 5, 1939, with the support of the Dominion and Labor parties. On September 6 he proclaimed the Union to be at war with Germany. Dissident elements in the United Party then merged with the pro-republican Nationalists under Dr. D. F. Malan to form the Reunited National or People's party in opposition to the Government. There was a split in the Reunited Party in November, 1940, when General Hertzog and a group of his followers resigned in protest against the Malanite program for immediate establishment of a Boer-dominated republic (see *YEAR BOOK* for 1940, pp. 702-03). The line-up in the House of Assembly at the beginning of 1941 was: Government bloc, 85 (United Party, 70; Dominion Party, 8; Labor Party, 4; Native representatives, 3); Reunited National Party, 67. For 1941 developments, see below.

HISTORY

The future of the Union of South Africa as a member of the British Commonwealth of Nations still hung in the balance during 1941, awaiting the outcome of the World War. In the absence of elections, Prime Minister Smuts and his pro-war Gov-

ernment retained a safe parliamentary majority. The brilliant successes of South African forces in Italian East Africa (see **WORLD WAR**) strengthened General Smuts' position politically, while heavy losses suffered by the South African contingent in the Libyan offensive in November-December had the opposite effect. The important section of the Afrikaans-speaking population opposing participation in the war was split and weakened by further dissension among its leaders over the question of secession from the British Commonwealth. But in general there appeared to be no great change in public sentiment on these basic issues.

The formidable problem of financing the Union's war preparations and activities was met with the aid of the Union's huge gold production and through the assistance of Great Britain and the United States. The United States became increasingly important to South Africa, both as a supplier of its military and civilian needs and as the chief purchaser of its gold.

The Political Field. The continuance of his strong majority in Parliament made the political part of Premier Smuts' task relatively simple. He informed the Senate at the beginning of February that South African troops were about to fight on the Mediterranean coast of the continent and declared that if, after that area had been cleared up, it should be necessary to send troops overseas Parliament would be consulted. This confirmed an earlier declaration that he intended to put before that body the matter of sending troops beyond the African continent whenever the occasion should arise.

Gen. J. B. M. Hertzog, the most influential anti-war leader, had withdrawn from active politics late in 1940. Some of his followers, under former Minister of Finance N. C. Havenga, formed a new party of Hertzog stalwarts in the closing days of January, 1941, calling it the Afrikaner party. Its creation hurt the Reunited Nationalist party, from which after a short union Hertzog had lately withdrawn (see above under *Government*).

Hertzog accepted the honorary presidency of the new party. Addressing a meeting of its executive committees at Johannesburg near the end of October, he advocated national socialism of the German variety as the only solution of South Africa's economic and political problems. His stand was repudiated the next day by the Afrikaner party and by its leader, Havenga, who had been a close political associate of Hertzog's for 40 years. The party formally affirmed its adherence to democratic principles. This development, in combination with the split of 1940 in the Reunited Nationalist party, served to confuse and weaken the Afrikaner groups opposed to participation in the war or to maintenance of the British connection.

The intensity of feeling on these issues was indicated by the severe rioting that broke out in Johannesburg January 31. Union soldiers attempted to break up a meeting of the Ossewabrandwag, an extremist organization of Afrikaners. Sporadic violence continued for three days, despite repressive measures taken by the police. Offices of Nationalist newspapers were stoned and 230 persons (mostly soldiers) were injured before troops were brought in to end the disorders.

Participation in the War. Previously at war with Germany and Italy, the Union entered war with Japan on December 9. The active participation of the Union's forces on land in 1941 was limited to the fields of Ethiopia, Somaliland, and Libya. Premier Smuts stated the South Africans' casualties in the battle of Rezegh, in Libya, as approximately 1,200. A South African Purchasing Commission of

five members was appointed, about July 12, to obtain goods in the United States. In collaboration with the British Government it there represented the Union in the increasingly heavy purchase of American goods, chiefly under the terms of the U.S. Lease-Lend Act, and mainly for needs of war. Decreasing heavy penalties for the taking of unreasonable profits August 29, limiting prices, regulating hours of work upward, and restricting imports from countries not on the sterling monetary basis, September 14, after the manner of other parts of the British Empire, the Union had acquired by the latter part of 1941 most of the devices that other of the dominions used to protect their economy from avoidable stress of war. A previously executed treaty with the U.S. Government came into force, March 11; it provided a commission of five members for the conciliation of disputes. As South Africa came to limit imports, it fell to the Purchasing Commission to coordinate the purchases of the governmental branches and of private buyers on U.S. export licenses. An offer from the British Government to buy the whole year's clip of wool helped the Union through the difficulty raised by the loss of its European continental market.

Gold Mining. The difficulty of mining gold with a profit in times of scanty labor and high cost lent unusual interest to the question whether the South African production of gold could be fully maintained in 1941. No early estimates of output of 1941 appeared. It was reported, however, that the mines had 400,000 men or more at work. A great part of the gold sent from South Africa in 1941 was brought to the United States and there delivered to the New York Assay Office.

Industrialization at Home. The emergency of war intensified the wish of some elements in South Africa to broaden the country industrially and make it produce a greater part of what it needed. The South African Iron and Steel Industrial Corporation began the construction of an establishment designed eventually to put out 2,000,000 tons a year of steel products, or six fold the output of the Union before the war. The intended initial output was 1,000,000 tons a year. The works, situated on the Vaal River, were to cost £10,000,000, employ 10,000 persons, and fill the Union's normal requirements of steel.

Personalities. Lord Harlech (W. G. A. Ormsby-Gore) was appointed, February 21, British High Commissioner in the Union of South Africa. Premier Smuts was appointed, May 24, a Field Marshal of the British Army, on his attaining the age of 71 years Rear Admiral G. W. Hallifax, director of the South African seaward defenses, and Col. H. Cilliers, director of coast aircraft and artillery, died in a flying accident, January 28.

See **LABOR CONDITIONS** under *Hours of Work*; **PORTS AND HARBORS**; **WORLD WAR**

SOUTH AMERICA. A continent comprising 10 republics (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela) and three colonies (British Guiana, French Guiana, and Surinam). Total area, about 6,934,356 square miles; population, 91,300,000 (Dec. 31, 1938 estimate). See **COMMUNISM**, **FASCISM**, **PAN AMERICANISM**, **PAN AMERICAN UNION**, **REGIONAL CONFERENCE OF THE RIO DE LA PLATA**; also separate articles on each country and colony, as **ARGENTINA**, **BOLIVIA**, **BRAZIL**, and **CHILE**.

SOUTH AUSTRALIA. See **AUSTRALIA** under *Area and Population*.

SOUTH CAROLINA. A south Atlantic State. Area: 31,055 sq. mi., including 461 sq. mi. of inland water, but excluding Atlantic coastal waters, 138 sq. mi. Population: (1940 census) 1,899,804. The urban population comprises 24.5 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 43.0 per cent (U.S. average, 10.2); elderly (65 years and over), 4.2 per cent. South Carolina ranks 39th among the States in area, 26th in population, and 18th in density, with an average of 62.1 persons per square mile. The capital is Columbia with 62,396 inhabitants; largest city, Charleston, 71,275. There are 46 counties and 10 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK) For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to J. H. Hope, Superintendent of Education, there were 481,750 pupils enrolled in the public schools of South Carolina during the school year 1940-41, 397,950 in elementary schools and 86,800 in secondary schools. Teachers numbered 3,493 and received an annual average salary of \$1,008. Total expenditures for the year were \$17,953,412. For higher education see *South Carolina* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 8,521, of which 6,843 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 343,688; 289,088 were private and commercial automobiles, 1,278 busses, and 46,406 trucks and tractor trucks. Gross motor-fuel consumption was 234,307,000 gal. Net motor-fuel tax receipts were \$13,910,000, the rate being six cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,104,000.

Railways of all classes extended 3,486 miles (Dec. 31, 1939) 1.48 per cent of the total mileage in the United States. Class 1 steam railways (2,322 miles) reported 5,342,846 tons of revenue freight originating in South Carolina in 1940 and 6,881,061 tons terminating in South Carolina. There are 29 airports and landing fields in the State (10 lighted fields) and five seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 204 civil aircraft in the State and 861 commercial and private pilots (768 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 4,871,000, as compared with 5,034,000 acres in 1940. According to the latest census, there are 137,558 farms, valued at \$338,393,517, averaging 81.7 acres each. Farm population numbered 915,597 or 48.2 per cent of the total. Leading crops with production in 1941 were: Cotton lint, \$34,425,000, 405,000 bales; corn, \$16,960,000, 22,316,000 bu.; tobacco, \$16,500,000, 66,000,000 lb.; cottonseed, \$9,540,000, 180,000 tons; hay, \$6,986,000, 477,000 tons; oats, \$6,655,000, 12,100,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census (for the year 1939) was \$397,512,863; 1,331 establishments employed 126,980 wage earners who received \$86,616,242 in wages for the year.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$5,422,979, or only .13 per cent of the United States total. Chief items are stone, clay products, and raw clay.

Trade. According to the 1940 census there were 1,450 wholesale establishments in South Carolina, employing 8,241 persons, reporting net sales for 1939 of \$297,211,000 and annual pay roll of \$9,994,000. There were 18,520 retail stores with

41,119 employees, reporting sales of \$332,224,000 and pay roll of \$29,093,000. Service establishments numbered 5,351, employing 10,730 persons for \$5,982,000 per year, and reporting a business volume amounting to \$18,877,000. The leading business center of the State is Columbia which reported wholesale sales of \$46,576,000 and retail sales of \$33,193,000. Charleston reported sales of \$31,292,000 wholesale and \$29,064,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in South Carolina was \$30,781,000. Under the Social Security program, financed by Federal funds matching State grants, 17,683 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$7.95 (U.S. average pension, \$21.08); 10,992 dependent children in 3,760 families received average monthly payments of \$18.72 per family (U.S. average, \$32.73); and 801 blind persons received \$10.27 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 2,261 and received \$8.21 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 3,579 (\$237,000); NYA student work program, 5,652 (\$35,000); NYA out-of-school work program, 6,442 (\$120,000); WPA, 25,801 (\$1,661,000), other Federal emergency projects, 2,626 (\$329,000); regular Federal construction projects, 15,963 (\$2,151,000). The Farm Security Administration certified subsistence payments totaling \$41,000 for the month to 692 cases.

Legislation. The General Assembly convenes in regular session on the second Tuesday of January annually. It is composed of 46 Senators and 124 Representatives, all of whom are Democrats.

Finances. Total tax collections in South Carolina for the fiscal year ending in June, 1941, were \$39,198,000 (1940: \$34,637,000). Total sales taxes amounted to \$23,605,000, including motor fuel, \$14,650,000. Taxes on specific businesses ran to \$4,215,000, general and selective property, \$902,000, unemployment compensation, \$5,236,000. The net income taxes were \$4,396,000. Cost payments for the operation of general government totaled \$32,483,000 in 1939, the latest year available. (Revenues for the general government for that year were \$40,469,000.) Cost of operation per capita was \$17.30. Total gross debt outstanding in 1941 was \$71,738,000, as compared with \$78,528,000 in 1932.

Officers and Judiciary. The Governor is Burnet R. Maybank (Dem.), inaugurated in 1939 for a four-year term; Lieutenant Governor, J. E. Harley; Secretary of State, W. P. Blackwell; Attorney General, John M. Daniel; State Treasurer, Jeff B. Bates; Comptroller-General, A. J. Beattie; State Auditor, J. M. Smith. Chief Justice of the South Carolina Supreme Court is Milledge L. Bonham; there are four associate members elected by the General Assembly for 10-year terms.

See HURRICANES; PORTS AND HARBORS; PRISONS, PAROLE, AND CRIME CONTROL.

SOUTH DAKOTA. A west north central State. Area: 77,047 sq. mi., including 511 sq. mi. of inland water. Population: (1940 census) 642,961. The urban population comprises 24.6 per cent of the total (U.S. average, 56.5 per cent); non-white population, 3.8 per cent (U.S. average, 10.2); elderly (65 years and over), 6.8 per cent. South Dakota ranks 14th among the States in area, 37th in population,

and 41st in density, with an average of 8.4 persons per square mile. The capital is Pierre with 4,322 inhabitants; largest city, Sioux Falls, 40,832. There are 69 counties and six cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to J. F. Hines, Superintendent of Public Instruction, there were 133,378 pupils enrolled in the public schools of South Dakota during the school year 1940-41, 95,994 in elementary schools and 37,384 in secondary schools. Teachers numbered 7,952 and received an annual average salary of \$828.76. Total expenditures for the year were \$12,288,110.44.

Transportation. State highway mileage in 1939, including streets under State control, totaled 6,003, of which 5,269 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 198,615; 163,252 were private and commercial automobiles, 117 busses, and 32,298 trucks and tractor trucks. Gross motor-fuel consumption was 145,713,000 gal. Net motor-fuel tax receipts were \$4,527,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,794,000.

Railways of all classes extended 4,127 miles (Dec. 31, 1939) 1.76 per cent of the total mileage in the United States. Class I steam railways (4,062 miles) reported 1,979,094 tons of revenue freight originating in South Dakota in 1940 and 2,511,296 tons terminating in South Dakota. There are 23 airports and landing fields in the State (four lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 107 civil aircraft in the State and 578 airline transport, commercial, and private pilots (520 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 14,472,400, as compared with 13,631,600 acres in 1940. According to the latest census, there are 72,454 farms, valued at \$505,452,178, averaging 544.8 acres each. Farm population numbered 307,762 or 47.9 per cent of the total. Leading crops with production in 1941 were: Wheat, \$33,725,000, 35,130,000 bu.; corn, \$31,504,000, 50,006,000 bu.; oats, \$18,121,000, 54,912,000 bu.; barley, \$17,761,000, 38,610,000 bu.; hay, \$9,566,000, 2,090,000 tons.

Manufacturing. The total value of manufactured products, according to the latest census, was \$31,171,887 for the year 1939; 468 establishments employed 5,538 wage earners who received \$6,035,524 in wages for the year.

Mineral Production. The chief mineral product is gold, of which 610,223 fine ounces were produced in 1941, valued at \$21,357,805, as compared with 586,662 ounces, \$20,533,170 in 1940. The total value of minerals produced in 1939, according to the U. S. Bureau of Mines, was \$24,811,231 or .59 per cent of the total for the United States.

Trade. According to the 1940 census there were 2,022 wholesale establishments in South Dakota, employing 4,697 persons, reporting net sales for 1939 of \$133,396,000 and annual pay roll of \$5,631,000. There were 9,817 retail stores with 17,307 employees, reporting sales of \$169,396,000 and pay roll of \$13,592,000. Service establishments numbered 2,964, employing 2,560 persons for \$1,750,000 per year, and reporting a business volume amounting to \$8,205,000. The leading business center of the State is Sioux Falls which reported wholesale sales of \$42,641,000 and retail sales of \$23,285,000. Rapid City reported retail sales of \$10,450,000.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in South Dakota was \$16,353,000. Under the Social Security program, financed by Federal funds matching State grants, 14,968 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$19.15 (U. S. average pension, \$21.08); 3,548 dependent children in 1,522 families (figures include aid administered without Federal participation) received average monthly payments of \$27.08 per family (U. S. average, \$32.73); and 281 blind persons received \$16.85 per month (U. S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 3,126 and received \$13.99 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses). CCC, 2,609 (\$173,000); NYA student work program, 5,129 (\$29,000), NYA out-of-school work program, 2,657 (\$52,000), WPA, 9,764 (\$570,000); regular Federal construction projects, 1,727 (\$164,000). The Farm Security Administration certified subsistence payments totaling \$21,000 for the month to 1,097 cases.

Legislation. The Legislature convenes in regular session on Tuesday after the first Monday of January in odd years. It is composed of 35 Senators (4 Democrats and 31 Republicans in 1941) and 75 Representatives (10 Democrats and 65 Republicans). Major activities during the two-months session of 1941 were summarized as follows in an Associated Press dispatch supplied through the courtesy of the Sioux Falls *Daily Argus-Leader*:

Taxation. Cut sales tax from 3 to 2 per cent, an estimated reduction of \$1,300,000 a year. Reduced income tax rates, a \$175,000 yearly item. Defeated homestead tax exemption, gross ore tax reduction, and exemption of farm machinery from sales tax.

Expenditures. Appropriated about \$17,700,000 for next biennium, boost of nearly \$1,500,000 over previous two years, but largely because of dumping more revenues into general fund, by new grants for aid to dependent children, a \$565,000 institutional building program and \$756,000 given local governments in additional items.

Liquor. Passed measures to hold proprietors responsible for spiking on their premises when they knowingly permit it, to permit prosecution of liquor cases in municipal and justice courts, giving anyone right of action against bond of liquor proprietor who violates law. Defeated bill to return old saloon by permitting bars to handle package liquor.

Transportation. Three times defeated attempt by truckers to win gross weights more than present 30,000 pound load limit. Said "no" to bill to create highway reciprocity commission to correlate truck taxes with other states. Gave utility commission power to regulate trucks on abandoned railroad lines.

Permanent School Fund. Proposed three constitutional amendments for people to vote on in 1941, granting counties 25 years to pay debt to school fund at 1 per cent interest and to let local units keep enough income from tax-exempt school lands to pay them the equivalent of taxes on that land. Voted \$600,000 yearly as "stop gap" until people act on proposed constitutional changes.

Education. Gave \$775,000 yearly aid to common schools and \$150,000 a year to particularly distressed schools. Defeated attempt to repeal 1939 teachers pension law, but again failed to appropriate for its operation.

Research and Publicity. Turned down modified planning board. Allowed governor \$15,000 to study Missouri River power and manganese possibilities and lobby for their development. Set aside \$10,000 for state advertising under governor. Gave university \$15,000 for business research, and state college slightly increased amounts for agricultural experiment stations.

Oil Exploration. Created three-man conservation board with power to regulate production of any oil or gas that may be discovered. Clarified real estate title procedures and lowered fees for recording leases.

Finances. A partial report on total tax collections in South Dakota for the fiscal year ending in June, 1941, showed \$17,269,000 collected (complete report for 1940: \$17,401,000). Total sales taxes

amounted to \$12,572,000, including motor fuel, \$5,883,000, general sales, \$5,014,000. Taxes on specific businesses ran to \$733,000, general and selective property \$963,000 (1940), unemployment compensation, \$966,000. The net income taxes were \$859,000.

Cost payments for the operation of general government totaled \$15,587,000 in 1939, the latest year available. (Revenues for the general government for that year were \$25,303,000.) Cost of operation per capita was \$23.94. Total gross debt outstanding in 1941 was \$41,436,000, as compared with \$51,432,000 in 1932.

Officers and Judiciary. The Governor is Harlan J. Bushfield (Rep.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Albert C. Miller; Secretary of State, Olive A. Ringsrud; Attorney General, Leo A. Temmey; State Treasurer, W. G. Douglas; State Auditor, W. W. Warner. Presiding Judge of the South Dakota Supreme Court is S. C. Polley; there are four other judges elected by popular vote for six-year terms.

SOUTHERN RHODESIA. See RHODESIA, SOUTHERN.
SOUTH GEORGIA; SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH-WEST AFRICA. A former German territory in Africa, now administered by the Union of South Africa under a mandate from the League of Nations, dated Dec. 17, 1920. Total area, including Caprivi Zipfel, 322,394 square miles. Population (Jan. 1, 1939), 293,000. Chief towns: Windhoek (capital), 10,651 inhabitants in 1936, Lüderitz, Keetmanshoop, Swakopmund, Walvis Bay (belongs to the Cape of Good Hope but is administered by South-West Africa). Education (1939): European—81 schools and 6,342 pupils; African—99 schools and 5,712 pupils.

Production and Trade. The main industry is stock raising Agriculture, owing to the low rainfall, is only profitable in the northern and northwestern portions of the country. Livestock (1939): 1,053,033 cattle, 4,937,802 head of small stock, 105,642 donkeys, 29,104 horses, and 1,802 mules. During 1939 some 1,583,448 karakul pelts were produced and exported. Dairy products (1939): 10,857,472 lb. of butter and 657,532 lb. of cheese. Minerals produced (1940) included diamonds (30,017 metric carats), gold (1,358 fine oz.), silver (460,000 fine oz.), tin (197 long tons), iron, lead, copper, vanadium (3,171 long tons), tungsten, and salt. Trade (1939): SA £ 2,300,724 for imports and SA £ 3,396,349 for exports (SA £ averaged \$4.4017 for 1939; \$3.9800, 1940).

Government. Budget (1940-41): SA £ 607,000 for revenue and SA £ 813,000 for expenditure. The territory belongs to the South African Customs Union and a lump sum based on the customs and excise taxes on goods consumed is paid to the administration. South-West Africa is governed by an administrator (appointed by the governor general) who is assisted by an advisory council, and a legislative council (12 elected and 6 appointed members). Administrator, Dr. D. G. Conradie (appointed April, 1933).

SOVIET UNION. See UNION OF SOVIET SOCIALIST REPUBLICS.

SOYBEANS. The production of soybeans for beans in the United States in 1941 was estimated by the U.S. Department of Agriculture at 106,712,000 bu., an all-time record, 38 per cent larger than the 77,374,000 bu. of 1940, and three times as large as the

1930-39 average of 35,506,000 bu. A new high record was set again in 1941 for acreage harvested for beans, 5,855,000 acres versus 4,779,000 acres in 1940. The total acreage of soybeans sown alone was 9,996,000 compared with 10,513,000 acres in 1940. Major factors contributing to the large acreage harvested for beans were increase in price and revision in the 1941 Agricultural Conservation Program which permitted growers to harvest a larger acreage than in 1940 without deductions in program payments. Acre yields averaged 18.2 bu in 1941 and 16.2 bu. in 1940. States leading in yields of soybeans for beans were Illinois 49,128,000 bu., Iowa 16,608,000, Indiana 14,552,000, Ohio 13,143,000, Missouri 2,150,000, Arkansas 1,740,000, North Carolina 1,710,000, and Michigan 1,344,000 bu. The season average price per bushel (preliminary) received by farmers was \$1.47 in 1941 and the value of production was estimated at \$157,070,000 versus 90¢ and \$69,597,000 in 1940. Soybean hay production declined to 4,741,000 tons from 3,649,000 acres in 1941 from 6,559,000 tons from 4,916,000 acres in 1940. Soybeans grazed or plowed under in 1941 totaled 1,710,000 acres. See CHEMISTRY, INDUSTRIAL under *Fats and Oils*; HAY.

SPAB. See SUPPLY PRIORITIES AND ALLOCATIONS BOARD.

SPAIN. A state of southwestern Europe. Capital, Madrid.

Area and Population. Area, 196,607 square miles, including the Balearic Islands (1,935 sq. mi.) and the Canary Islands (1,279 sq. mi.). The population in 1940 was estimated at 26,000,000 (23,564,000 at 1930 census), including the Balearic Islands (estimated pop., 381,594 in 1939) and the Canaries (286,154 in 1939). Living births in 1938 numbered about 453,584 (17.8 per 1,000); deaths, 417,919 (16.4). Populations of the chief cities were (1934 estimates except as stated): Barcelona, 1,399,000 (1940); Madrid, 1,194,000 (1940); Valencia, 352,802; Seville, 238,727; Málaga, 203,844; Saragossa, 189,062; Bilbao, 175,898.

Colonial Empire. The principal divisions of the colonial possessions of Spain are listed in the accompanying table. For administrative purposes the Balearic Islands in the Mediterranean, the Canary Islands off the northwest coast of Africa, and the areas of Ceuta and Melilla in north Africa, are considered an integral part of Spain.

Colony (Capital)	Sq. mi. ^a	Population ^a
Spanish Guinea ^b (Santa Isabel)	10,124	120,000
Spanish Morocco ^c (Tetuán)	8,108	750,000
Western Sahara ^d (Villa Cisneros)	110,036	110,038
Total	128,570	890,000

^a Estimated. ^b Includes Rio Muni (on the mainland) and the islands of Fernando Po, Annobon, Corisco, Great Elobey, and Little Elobey. ^c Excluding Tangier (q.v.) which was occupied by Spanish troops on June 14, 1940, and incorporated with Spanish Morocco on Nov. 14, 1940. ^d Includes Rio de Oro, Adrar, and Ifni.

Education and Religion. The 1930 census showed 45 per cent of the adult population as unable to read or write. At the end of the civil war in 1939, the Roman Catholic Church was reestablished as the official religion. The religious orders recovered their pre-republican legal status, properties, state subsidies, teaching rights, jurisdiction over cemeteries, and other privileges. In 1935 there were 4,720,260 pupils in 42,766 elementary schools, 130,752 pupils in 111 secondary schools, and 31,905 students in 11 universities.

Production. The principal occupations are agri-

culture, mining, manufacturing, and fishing. Estimated output of the principal farm products in 1940, with average yield during 1930-34 in parentheses, was (in metric tons except as noted): Wheat, under 2,000,000 (4,302,300); barley, 2,000,000 (2,424,100); rye, 410,300 in 1939 (563,000); oats, 478,600 in 1939 (701,000); corn, 843,300 in 1939 (708,900); rice, 240,000 (297,200); potatoes, (4,781,700); olive oil, 317,000 in 1940-41 (281,200); cotton, 1,600; beet sugar, 110,000 in 1939-40 (about 170,000 in 1940-41). The 1940 wool clip was estimated at some 84,000,000 lb.; cork production, 30,000 metric tons.

Mineral and metallurgical output (1940) in metric tons was: Iron ore, 2,886,973; pig iron, 620,652, steel ingots and castings, 758,682; coal, 8,844,000, pyrites, 957,716 (exports only); lead, 58,490; zinc, 82,626; tin, 255; wolfram, 247; aluminum, 271. A leading producer of quicksilver, Spain exported about 1,450 metric tons in 1938. Manufacturing production in 1940 was above the 1939 level but below that of 1935. The chief manufactures are cotton textiles, paper, glass, cement (1,470,000 metric tons sold in 1940), wood-pulp (output, about 9,000 metric tons in 1940), rayon (7,496,000 lb. in 1940), explosives, etc.

Foreign Trade. Unpublished figures of Spanish foreign commerce during 1940 showed exports valued at 394,335,325 gold pesetas (\$128,839,000) and imports of 620,585,225 gold pesetas (\$202,745,000). The only official trade data issued since 1936 covers the last nine months of 1939. For that period, imports were equivalent to \$111,978,000, exports, \$78,287,000. See YEAR BOOK for 1940, p 707, for more details.

Finance. Budget appropriations for 1940 totaled 7,160,000,000 pesetas, less than half the last peacetime budget. Revenues during the first six months of the year amounted to 2,961,000,000 pesetas, exclusive of new loans. The 1940 budget was extended through 1941 by a decree of Dec. 30, 1940. During the three years of civil war ending in July, 1939, there was a cumulative budget deficit of 8,260,000,000 pesetas, covered mainly by advances from the Bank of Spain. The funded public debt on Jan. 1, 1940, was reported at 23,885,000,000 pesetas. As of June 30, 1940, the foreign debt amounted to 1,200,000,000 gold pesetas, exclusive of the debt to Germany, estimated at 300,000,000 marks. The peseta, equivalent to \$0.0913 at the official rate, had an average nominal exchange value of \$0.0999 in 1939 and \$0.0932 in 1940.

Transportation. In 1941 Spain had approximately 10,340 miles of railway lines, 70,760 miles of roads, and air lines connecting Madrid and the other principal cities with Berlin, Rome, the Canary and Balearic Islands, with London and New York via Lisbon, Portugal, and with Tetuan and Melilla in North Africa. The railways in 1940 carried 168,000,000 passengers (about 65 per cent more than in 1939) and 40,500,500 metric tons of freight. In January, 1941, all standard-gauge railways were placed under direct Government control, to be exercised through an Administrative Council, which was to absorb the privately owned systems. In September, 1940, control of the Compañía Telefónica de España was returned to its shareholders, predominantly American.

Government. As a result of the Civil War of July 17, 1936, to Apr. 1, 1939, the republic established in 1931 was replaced by a Fascist dictatorship, headed by Gen. Francisco Franco as Leader (Caudillo) of the Empire, Chief of State, Commander-in-Chief of the Army, Premier, and head of the Falange Española (government party), in which

were merged all political groups supporting the Franco regime. All other political parties were outlawed. General Franco exercised his dictatorial powers either directly, or through his Cabinet, or through the governing organs of the Falange Española. The Falange organs consisted of a National Council of about 100 members, representing the various pro-Franco political groups, and a Political Council of 19 which served as the permanent governing board of the party. Franco was President of the National Council and appointed its Secretary-General. The National Council was empowered to determine the structure of both the state and the government party, control syndical organizations, etc. The president of the Political Council and guiding spirit of the Falange Española was Ramon Serrano Suñer, Franco's brother-in-law.

HISTORY

Foreign Policy. Throughout 1941 Nationalist Spain wavered between maintenance of its pro-Axis non-belligerency and outright participation in the war against Britain and her allies. As in 1940 (see YEAR BOOK for 1940, p. 707 f), Madrid was a battleground between German and Italian envoys determined to push Spain into the conflict and Anglo-American diplomats striving to keep it neutral or nonbelligerent. The Axis enticed General Franco with promises of Gibraltar, a part of French North Africa, and restoration of Spain's former influence in Latin America. They demanded repayment of the political debt Franco incurred through Axis assistance during the Spanish civil war. At the same time the Caudillo was warned that overlong delay might encourage an Axis agreement with France that would block Spain's expansionist ambitions in North Africa.

The counter-pressure from Britain, backed by the United States, was equally powerful. Concentrating upon Spain's economic weakness and physical exhaustion, Anglo-American diplomacy offered credits, food, and supplies in return for the continuance of Madrid's nonbelligerency. The British speeded up preparations for a last-ditch defense of Gibraltar, while threatening to clamp a complete blockade upon hungry Spain if it entered upon full-fledged war. Within Spain, the fanatical and powerful pro-war faction of the Falange Española demanded immediate participation in the conflict, while some influential monarchists, church leaders, and army officers opposed it. General Franco held the balance between these opposing forces. German military victories in the Balkans in April-May and again in Russia after June 22 seemingly brought him to the verge of actual warfare. Axis military reverses and a tightening of the diplomatic and economic screws by Britain and the United States moved him back upon the fence of nonbelligerency. With Spain ravaged by hunger and disease and still deeply divided by the hatreds of the civil war, Franco dared not venture into the World War unless an early Axis victory seemed assured.

Conference with Mussolini. Accompanied by Foreign Minister Serrano Suñer, General Franco conferred with Premier Mussolini at Bordighera, Italy, on February 12. The subject of their discussions was not revealed, but it was indicated that Mussolini pressed Franco for military aid against Britain and for repayment of Spain's civil war financial obligations to Italy. Rival Spanish and Italian claims upon Tangier and French North Africa were apparently adjusted. On the way home from Italy, Franco met Marshal Pétain at Montpellier, France, for a discussion of French-Spanish relations. His trip brought no perceptible change in foreign pol-

icy. Spain proceeded in March to tighten its grip on Tangier (q.v.), which Mussolini had coveted. Italo-Spanish relations were not assisted by Italy's increasing military dependence upon Germany, the bombing of La Linea, Spain, by Italian planes attempting a raid on Gibraltar on July 12, or the reported sinking of a Spanish steamer by an Italian submarine in November.

Pro-German Activities. The German victories in the Balkans in April and May made a tremendous impression upon Spain. Spokesmen of the Franco Government were quick to emphasize their support of the Nazi cause. A virulent anti-British campaign was launched by the Falangist press, despite the British Government's advance of a £2,500,000 credit to Spain on April 7 for the purchase of food and raw materials. Toward the end of April, a Spanish declaration of war seemed imminent and there was an exodus of the American colony from Spain to Portugal. At this crucial period the American Ambassador reportedly warned Franco that Washington would not accept a British defeat. Almost at the same time, the first of three ships laden with Red Cross foodstuffs and medical supplies sailed from the United States with Anglo-American permission. Whether from these or other reasons, Franco curbed the prowar trend, especially through the replacement of pro-Nazi members of the Government late in May (see below).

Madrid gave further proof of its friendship for Nazi Germany on May 30, when an agreement for an exchange of Spanish agricultural and other workers for a smaller number of German technicians was approved by the Cabinet. On June 4 the Government announced that it would establish a legation in Hsinking, Manchoukuo, and establish diplomatic relations with Iran to demonstrate solidarity with the Axis "new order."

The German invasion of Russia on June 22 provoked a new wave of prowar sentiment in Madrid. Falangist demonstrators stoned the British embassy and cheered Axis diplomatic representatives. At Hitler's request, Spanish volunteers were recruited for service with the German forces against Russia. The British Government accepted a Franco apology for the anti-British outbreak in Madrid and immediately thereafter (June 30) signed an agreement permitting Spain to import normal gasoline supplies for the ensuing three months. Nevertheless Franco on July 17 strongly attacked the "plutocracies" in a speech before the National Council of the Falange. He declared the hour had arrived to end their "attempts at political shackling incompatible with our sovereignty and our dignity as a nation" in connection with proffers of help for Spain's reconstruction. He said the Allies had already lost the war and that intervention would bring catastrophe to the American continent. Strong measures were promised against internal enemies who sought to obstruct the regime. The British Foreign Secretary replied by threatening to end Anglo-Spanish economic arrangements unless Franco modified his attitude.

The period of rapid German advance into Russia was accompanied by seemingly reliable reports of Axis aircraft and submarines operating from Spanish bases against Allied shipping. Roads from Irun on the French-Spanish frontier to the Portuguese frontier were said to have been strengthened and improved to facilitate the rapid advance of German mechanized forces. German war materials and picked troops were reported to have been concentrated near Gibraltar. Many observers reported a steady influx of German "tourists" and business men. On November 25 Spain joined Germany and

the other Axis powers in renewing the anti-Comintern pact for another five years (see GERMANY under *History*). But meanwhile the German reverses in Russia, increasing American aid to Britain and Russia, and the British offensive in Libya had inspired new caution at Madrid. When Japan and the United States entered the conflict in December, the Franco Government on December 19 announced that it would maintain its policy of non-belligerency.

Relations with United States. The Franco-controlled press directed a constant barrage of violent criticism at U.S. foreign policies during the year, despite Spain's dependence upon American aid in meeting the hunger crisis. A first shipload of food and medicines sent by the American Red Cross reached Spain late in February. From then until the new wheat harvest became available in August, an American Red Cross mission distributed more than \$4,000,000 worth of supplies to about a million Spaniards in famine-threatened districts.

The mission ended distribution of food and medicines in August, partly because of the improved food situation and partly because of the difficulties placed in its path by Franco officials. The Government showed extreme reluctance to give the Red Cross credit for its work. General Franco, Foreign Minister Serrano Suñer, and other spokesmen denounced the United States and Britain for insisting that Spain remain neutral as the price of economic aid. This attitude was declared to be incompatible with Spain's honor. The Falangist organ *Arriba* on June 22 attacked the Red Cross as "Masonic, Jewish, and liberal." On July 17 General Franco publicly scored the United States for "refusing aid to Spain in her hour of need." He charged that Spain had purchased 100,000 tons of wheat in the United States but that Washington had put insuperable obstacles in the way of its shipment. Spain's funds in the United States were impounded by President Roosevelt in June, 1941. Most of the American capital in Spain had been frozen since the beginning of the civil war in 1936. In August, however, Washington issued licenses for the export of oil and gasoline to Spain.

Latin American Policy. The Franco Government played an important role in Axis efforts to undermine inter-American solidarity and wean the Latin American countries away from the United States. The Council of Hispanicism established in 1940 to revive Spanish influence in Spanish America was further developed in 1941. On January 8 more than 60 charter members were appointed to the Council, including Spanish diplomats in leading Latin American capitals, churchmen, writers, and Falange leaders. Serrano Suñer was appointed its president. Seeking to remove suspicions aroused in the Americas by this gesture, Franco declared on February 20 that Spain had no intention of reimposing its rule on Spanish America. Efforts to establish branches of the Council throughout Latin America encountered considerable resistance. This was due in part to the widespread belief that the Council of Hispanicism, like the Latin American branches of the Falange Española, were serving as a screen for Nazi penetration. The Marquis de Aguiar, representative of Spanish Catholic and Royalist groups in the United States, charged on May 19 that every Spanish Consulate and Legation in the Americas maintained a German Nazi representative designated to combat Pan Americanism.

Late in May the Spanish liner *Cabo de Hornos*, fitted out as a propaganda showboat for the Council of Hispanicism, arrived in Montevideo on a tour of Latin American ports. Toward the end of July the

Franco Government sent a circular letter to all the Latin American governments, explaining Franco's reasons for sending Spanish volunteers to fight with Germany against Russia. It was viewed as a move to enlist Latin American sympathies behind the German cause. Prominent Franco sympathizers from many parts of Latin America were invited to attend a meeting sponsored by the Council of Hispanicism in Madrid in October. The Franco Government undertook to pay their expenses. Some delegates reached Madrid via the Italian transatlantic airline from Brazil. Four Mexicans, who sought passage on the Pan American line to Lisbon, were barred when the British Government refused them visas to pass through Bermuda.

United States officials on November 19 issued a memorandum citing evidence to support their charge that the Franco Government of Spain and the Vichy Government in France were apparently taking over from the Germans the task of spreading Axis propaganda in Latin America (see *New York Times*, Nov. 20, 1941). Serrano Suñer on December 16 issued a decree establishing five departments within the Council of Hispanicism, covering cultural, political, economic, social, and juridical relations with the American republics. The Council was empowered to censor all programs and publications relating to Spanish-speaking America.

The pro-Axis propaganda and other activities of Franco agents aroused friction and hostility in a number of the Latin American countries. Their efforts received a major setback when all of the Central American and Caribbean republics followed the United States into the war against the Axis, and when most of the South American republics prepared to sever relations with Germany, Italy, and Japan (see PAN AMERICANISM). Pro-Franco Spaniards were rounded up in Panama, and measures to curb their propagandist activities were taken in Cuba, Mexico, and many other Latin American republics. See ARGENTINA under *History* for economic accords with Spain.

In April and during other periods of Axis military successes, the Falangist organ *Arriba* adopted an openly threatening attitude toward Portugal, declaring that the Lisbon Government must choose between Britain and Spain. This campaign was resented in Brazil as well as in Portugal, and contributed to the hardening of Brazilian opinion in opposition to the Axis.

Vatican Accord. The controversy with the Vatican over the right to appoint the higher Spanish clergy was finally settled in 1941, after it had deadlocked negotiations for a concordat since 1939. The right to appoint Spanish bishops, previously enjoyed by the Crown, had reverted to the Vatican when the Spanish Republican Government denounced the concordat in 1931. The Franco Government's insistence upon its right to name the bishops was resisted by the Pope. A compromise agreement was signed by the Papal Nuncio in Madrid on June 7. The Spanish Government was authorized to nominate six or more candidates for each vacant bishopric or archbishopric. The Vatican was then to select three of the nominees and the Government in turn was to pick one out of the three for the position. The Vatican, however, was free to reject any Government nominee and to propose candidates not on the Government's original list. The Government could reject any of the Vatican's nominees on grounds of "general political policy," subject to negotiation.

Other provisions of the accord of June 7 bound the Government to open negotiations at once for a new concordat in line with Spain's "traditional

Catholicism." Meanwhile the state undertook to respect the first four articles of the concordat of 1851. These articles recognized Roman Catholicism as the sole state religion, conferred upon it extensive rights and privileges, authorized the bishops to supervise religious education in all educational institutions, and recognized the co-jurisdiction of the canon law in such matters as will and testament. The question of control over the religious orders remained to be settled, but already the Church had won from the Franco regime greater privileges than those accorded it under the monarchy.

The basic antagonism between the Church and the radical Fascist section of the Falange Española remained. In mid-August it was reported that General Franco ordered the deportation of Cardinal Segura y Saenz, former Primate of the Spanish Church, for presiding at a religious conference in Seville Cathedral at which the Government's policies were criticized. On November 3 General Franco named Bishop Enrique Pla y Deniel of Salamanca as Cardinal Primate of Spain with the approval of the Vatican. Early in December it was announced that Franco had rescinded his ban against the return of Cardinal Vidal y Barraquer from Rome to Spain. The Cardinal was exiled for refusing to support General Franco and the Falangist movement during the civil war.

Political Trends. In addition to his difficulties with the Church, General Franco faced a challenge to his leadership from the rabidly pro-Axis Fascists of the Falange Española, led by his brother-in-law, Serrano Suñer. Early in the year some of the younger members of the Falange demanded that the party take over complete control of the state. A concession was obtained March 5 in the form of a decree exempting members of the Falange National Council from liability to arrest or prosecution except on orders of the Chief of State or the Foreign Minister. This placed the Falange in the same privileged position as the Church and the army. A subsequent decree of May 4 exempted Falange newspapers from government censorship.

During April Serrano Suñer and the Falange radicals joined in the Axis pressure designed to force Spain into the World War. Franco attempted to halt this trend by a thorough shake-up of the Government and party officials, which began May 6 with the appointment of a new Chief of Staff and of Franco's intimate friend, Col. Valentin Galarza Morante, as Minister of Government, a post controlling the police and all communication facilities. On May 9 Franco dismissed the Chief of the National Police and civil governors of five provinces, while his new Minister of Government annulled the decree exempting Falange organs from censorship. Nine of the highest army commanders were replaced May 12, with friends of Franco and former monarchists supplanting pro-Axis officers.

Two influential pro-Axis propaganda officials were dismissed May 18. But the following day General Franco suddenly reversed his policy. Commencing with a reorganization of his Cabinet on May 19, he restored the influence of the radical wing of the Falange party. On May 21 the Falange was placed in complete control of newspapers, magazines, radio, moving pictures, and all other propaganda agencies in Spain. This turnabout was generally attributed to pressure exerted by Germany and Italy. It greatly strengthened the power of Foreign Minister Serrano Suñer.

Yet Franco refused to yield completely to the demands of the pro-Axis Falangists. This was indicated by the reported arrest of some of their most

prominent leaders late in August on charges of conspiring to assassinate him. On October 15 Franco pardoned 26 members of the Falange against whom disciplinary action had been taken. The Falange propaganda and press service was "reorganized" at the same time. A sweeping purge of the Falange was ordered by the party's secretary-general on November 20.

Agitation for Monarchy. Continuing disunity within the Franco regime lent encouragement to the campaign for restoration of the monarchy. This movement gained support not only from monarchists, Catholics, and many staunch supporters of the Franco dictatorship but also from some of the Spanish republicans at home and abroad. Gen. José Pozas, former republican minister of the Interior, announced in Mexico City February 14 that republican and monarchist groups were discussing joint action to replace the Franco dictatorship with either a conservative republican regime or a Bourbon monarchy.

These developments lent importance to a proclamation signed by ex-King Alfonso XIII in Rome two weeks before he died of angina pectoris on February 28 (see *NECROLOGY*). The proclamation designated his third son, Prince Juan, as his successor to the Spanish throne. On Apr. 14, 1931, Alfonso had suspended the exercise of his royal powers to avoid civil war but had refused to abdicate. His death brought expressions of condolence from General Franco, the Spanish Government, the various Spanish monarchist groups, and from 25 exiled republicans in Marseille, France.

The body was interred in the Spanish Church of Monserrat, Rome, but the Franco Government announced that permission had been granted for the transfer of his remains to the royal pantheon in the Escorial near Madrid. Franco ordered three days of mourning for the dead ruler and state memorial services were held in Madrid. The Chief of State was believed receptive to the early restoration of the monarchy, although this was opposed by the powerful majority Fascist wing of the Falange party. Some Falangists accompanied 200 leading Spanish monarchists to Rome where they were addressed by Don Juan on March 7. He assured them that whenever Spain deemed it opportune to restore the traditional monarchy, he would be ready to "take over such responsibilities without disturbing the present unity, destiny, and historic continuity of the nation." Opposition to Don Juan's enthronement was anticipated from the Axis powers, as he was a descendant of Queen Victoria of Great Britain on his mother's side and was educated in England.

Treatment of Opposition. Many Spaniards turned to the proposed restoration of the monarchy as the sole hope of bridging the deep gulf that had separated republicans and nationalists since before the outbreak of the civil war. The Franco regime had concentrated its efforts upon extirpating the defeated republicans at the conclusion of the civil conflict rather than on conciliatory measures. During 1941 the courts continued to mete out drastic punishment to opponents of the Government. A decree of January 5 ordered punishment by military tribunals for all acts of disobedience, negligence, or noncompliance with Government orders in virtually every sphere of activity. To curb the numerous railroad wrecks, summary courts martial were empowered to impose the death sentence immediately on railwaymen convicted of extreme carelessness.

On April 1, second anniversary of the collapse of the republic, Franco extended conditional amnesty to some 30,000 persons convicted of "crimi-

nal activity" in connection with the civil war and sentenced to 12 years or less imprisonment. Another decree of September 5 provided for speedier trials and other safeguards for arrested persons. Military courts were to review the cases of all persons held more than six months without trial. This aroused hope of early liberation of some 300,000 persons who had been awaiting trial in prisons and concentration camps since the civil war. The Cabinet on October 17 granted conditional freedom to 2,624 political prisoners and exiled 332 others. On November 9 2,476 more political prisoners were given conditional liberty.

In contrast with these conciliatory measures, five Republicans convicted of civil war assassinations were executed in Toledo April 9. A decree of April 11 provided for stiff prison terms and even the death penalty for anti-Government activities ranging from rumor-spreading to attacks on state functionaries. Seven high officials of the republic, including Foreign Minister Julio Alvarez del Vayo, were exiled for 15 years and fined sums ranging from 10,000,000 to 25,000,000 pesetas by the Madrid Court of Political Responsibilities on April 21. The same court on May 29 exiled the former President of Spain, Niceto Alcalá Zamora, for 15 years, ordered him to pay his "entire fortune" of 50,000,000 pesetas as a fine, and urged the Government to deprive him of citizenship.

Similar sentences were imposed September 18 on the former republican Premier, Juan Negrin, who was in Mexico, and on Luis Jimenez de Asua, former vice-president of the Cortes. The Tribunal for the Repression of Masonry and Communism on September 30 sentenced in absentia Negrin, Alvarez del Vayo, and seven other prominent republican leaders to 30 years imprisonment and loss of all civil and political rights. Lesser courts sentenced thousands of persons to labor gangs for the illegal sale of foodstuffs and other minor offenses.

Other Events. The hurricane that swept across Portugal into Northern Spain on February 15-16 (see *PORTUGAL* under *History*) caused considerable loss of life and heavy damage to crops and real properties in Spain. Lashed by the high wind, a great fire burnt the central portion of the city of Santander and forced an estimated 30,000 persons to flee from their homes. Relief was rushed to Santander by German military forces in Southern France, by the Spanish Government, and by the American Red Cross. On March 14 the explosion of a powder warehouse wrecked the Santa Barbara suburb of Seville, killed more than 17 persons, injured about 500, and left 3,000 homeless.

The food shortage and lack of hygiene produced a minor typhus outbreak in Madrid in March, which spread to other districts. In curbing the disease, officials took drastic measures to banish the numerous beggars roaming the streets of the capital. With the coming of warm weather, the disease disappeared. Price inflation developed rapidly during 1941, increasing the misery of the poor. However food, clothing, and luxuries remained readily available for the rich. Unemployment was widespread in December, despite larger yields of the principal farm crops. Highway transportation and many industries dependent upon imports were less active than in 1940.

The State continued its efforts to regulate and control all economic activities along totalitarian lines. A decree of June 23 authorized formation of 24 national syndicates, embracing all productive, processing, and service activities, but excluding syndicates of labor and professional men. A law of September 25 created a National Institute for In-

dustry to promote and finance new industrial enterprises, especially those connected with national defense or designed to further Spanish autarchy. Various laws and decrees were issued for the control of wages, prices, and distribution. The Government in September centralized its control over all agricultural associations, cooperatives, and syndicates in an effort to encourage production. On September 17 state control was established over all metal mines. Marriage loans and other financial incentives to an increase in the population were made available beginning in March. The Government at the same time took steps to discourage birth control.

See ARGENTINA, GERMANY, GREAT BRITAIN, and ITALY, under *History*; CHEMISTRY, INDUSTRIAL; DAMS; LABOR CONDITIONS under *Health and Safety*; NAVAL PROGRESS, PORTS AND HARBORS; ROMAN CATHOLIC CHURCH; WORLD WAR.

SPANISH-AMERICAN LITERATURES. World conditions have made it more difficult than ever to assemble materials for such articles as these. Consequently this presentation of the year's activities must not be taken as exhaustive, nor must the omission of any country from this account be considered as evidence that it was nonproductive in 1941.

The following works are of general interest: Samuel Guy Inman, *El destino de la América Latina* (translation of the author's *Latin America's Place in World Life*), few persons know so intimately, from both sides, the Pan American problem; *Antología de la poesía española contemporánea* (1900-1936), selections, prologue, and notes by Juan José Domenchina, with an epilogue, by the Spanish critic, E. Díez-Canedo; Raymond L. Grismer, *A New Bibliography of the Literatures of Spain and Spanish-America*, vols. i and ii (Aa-Ans, Ant-Azz).

Argentina. Of the materials that have come to hand, the field of fiction shows the heaviest contributions, with erudition in second place.

Drama. Abel Luis Novillo, *Lo más fuerte* (genial idea, daring thought, reasonable conception of social ethics, and profound moral sense—the new dramatist gives much promise); Samuel Eichelbaum, *Vergüenza de querer* and *Divorcio nupcial* (two splendid psychological studies of marital love).

Versé. Eleuterio F. Tiscornia, *Poetas gauchescos*, an anthology, by one who knows his gauchos; César Fernández Moreno (son of Fernández Moreno), *Gallo Ciego*, awarded the Municipal Prize; Horacio Rega Molina, *Oda Provincial*, the initial volume of a series; Mario Binetti, *La sombra buena*, 35 exquisite sonnets, and a number of *canciones* of dignified, homelike humility; Antonio de la Torre, *Coplas*, elegiac poems of Cuyo, in the Andes; Ricardo Pose, *Estampas y Poemas de la Escuela*, an unusual book of ideal relationships between teacher and pupil.

Erudition. *Sustancia, Revista de Cultura Superior*, Nos. 6, 7-8 (March and September 1941) fully justify the title. Nos. 7-8 contain a symposium of articles, by eleven scholars, about Bergson, who died Jan. 4, 1941, with a supplementary detailed Bergson bibliography. Carlos V. Videla Rivero has written *Compendio de Historia Argentina*, a fine book to place in the hands of adolescents, since its treatment of vexing problems between the United States and certain other countries is unusually well-informed and fair. Other books are: Antonio Eleas, *Divagaciones lingüísticas—en el dominio del castellano*, a keen, philosophical study of language, by the author of *El Alfabeto*, 1925, and *El Vasco*, 1935; Juan Pinto, *Panorama de la literatura argen-*

tina contemporánea, limited to the past 40 years; Ernesto Nelson, *Algunos puntos básicos para la reforma de la enseñanza media*, a profound work by a scholar with a vast international background who has long been Inspector General of secondary and special education throughout Argentina; Dr. Alejandro Raitzen, *Cultura, carácter, conducta*, a forceful psychological study of the problem of world leadership being transferred from Europe to America; Marcos M. Blanco, *El vuelco del mundo*, a plea for a purified democracy somewhat along the lines of Rodó's *Ariel*; a Berenguer Carisomo, *Las máscaras de Federico García Lorca*, and *Mérimée y su teatro de Clara Gazul*, two careful studies that have aroused both praise and criticism.

Fiction. Enrique Campos Menéndez, *Kupen*, eight thrilling stories dealing with Tierra del Fuego by the so-called "Kipling of the Argentine"; Renata Dongli Halperin, *El sol sobre las manos*, a well-received novel of humble folk, Juan Draghi Lucero, *Las mil y una noches argentinas*, folk-tales of Cuyo in the Andes; Pablo Rojas Paz, *El patio de la noche*, strong, beautiful narrations, Arturo Gimenez Pastor, *Figuras a la distancia*, a fine book of evocations of the end of the nineteenth century in Buenos Aires, Uruguay, and Chile, Bernardo Verbitsky, *Es difícil empezar a vivir*, Primer Premio del Concurso Ricardo Güiraldes de Novelas; J. Carlos Onetti, *Tierra de nadie*, Segundo Premio del Concurso Ricardo Güiraldes de Novelas; Enrique Amorim, *El caballo y su sombra*, a powerful picture of country life in Uruguay.

Bolivia. The only volume received is by Manuel Frontaura Argandona, *El Precursor*, the romantic story of Joseph Alonso Ibáñez and the founding of Potosí.

Chile. Versé. Juan Guzmán Cruchaga, *Aventura*, the author of *Junto al brasero*, *Chopin*, and *Lejana* gives us a new book of pure lyricism.

Erudition. Ricardo Puelma L., *Arenas del Mapocho: A Santiago de Chile en su IV centenario, 12 de Febrero de 1541-12 de Febrero de 1941*, highly praised by criollo critics; Benjamín Subercaseaux, *Chile o una loca geografía*, an important study of Chilean geography illustrated by Nemesio Antúnez Zañartu; Roberto Peragallo, *Por España* (prologue by Pedro Lira Urqueta) a collection of several discourses assembled in connection with the 400th anniversary of the founding of Santiago, by a member of the Academia Chilena de la Lengua who is also Ministro de la Corte Suprema de Justicia; Tomás Thayer Ojeda, *Formación de la Sociedad Chilena, y Censo de la Población de Chile en los años de 1540 a 1565, con datos estadísticos, biográficos, étnicos, y demográficos, Tomo II, Parte biográfica*, alphabetically arranged by family names, and treating in this volume Chile's early names from Gaitán de Mendoza (Juan) to Oyarzún (Juanes de); Lord Cochrane, *Memorias*, reminiscences of a noble Scot, who fought for the republics of the Andes; O'Higgins pintado por sí mismo, with a prologue by the Peruvian Luis Alberto Sánchez, and notes by various scholars.

Fiction. Macedonio Fernández, *Una novela que comienza*, a contribution to Spanish-American symbolism.

Colombia. Little has reached us from Colombia, but that little is well worth while.

Versé. Antonio Gómez Restrepo, secretary of the Academia Colombiana de la Lengua, *Poesías, Publicaciones de la Academia Colombiana, Tomo I*, a collection of the poetic works of the prince of Colombian literary criticism, by Padre José J. Ortega.

Erudition. José María Ots Capdequí, *Estudios de*

historia del Derecho Español en las Indias, a documented study of the history of Spanish Law in the Indies, by a Spanish legal authority now holding a chair in the University of Bogotá; Manuel José Forero, *Santander, Prócer de la Independencia Nacional*, published by the Ministry of National Education for placement in the hands of all youth of grade-school age; B. Matos Hurtado, *Perfiles de Santander, y un diario inédito de su enfermedad y muerte*.

Costa Rica. M. B. MacDonald and D. MacLaughlin, *Vida y Obras de Autores de Costa Rica*, a useful reference work.

Cuba. *Erudition* outstripped all other genres in the materials that have reached us. Gilberto González y Contreras, *Rubén Romero, el hombre que supo ver*, a study of one of the outstanding litterateurs of the Mexican revolutionary period; Fermín Peraza Sarausa, *Anuario Bibliográfico Cubano, 1940*, fifth number of annual bibliography; Cosme de la Torriente, *Cuarenta años de mi vida*, by a Cuban patriot who has spent long years in the service of his country; J. J. Remos, *Hombres de Cuba*, penetrating essays on several Cuban celebrities; José Martí, *Antología familiar, Cuadernos de cultura*, a collection of varied prose and verse, and letters to family and friends by this patriot; José Martí, *Diario de Martí, de Cabo Haitiano a Dos Ríos, 9 de Abril a Mayo 17, 1895*, republished for free distribution in public and private cultural centers of the nation. *Vida y Obras de Autores Cubanos, Revista Cubana* (enero-junio, 1941—vol. 15), by R. L. Grismer and M. R. Saavedra, is a very meaty number, and does credit to the Ministerio de Educación and the Dirección de Cultura which produce it. *Academia Nacional de Artes y Letras*, has renewed publication and Años XXIV and XXV (tomo XXI, julio 1928—junio 1940) have already appeared, containing much important material.

Fiction. Flora Díaz Parrado: *Cinco Cuentos y "El Velorio de Pura."* Dr. Díaz is one of the outstanding women of Cuba, the only one ever to have held the post of *Chargé d'Affaires* in France and who now holds the title of Secretary of Legation. Her book serves not merely as entertainment, but also as enlightenment on certain aspects of Cuban life today.

Drama. José Antonio Ramos, *El Traidor, La Leyenda de las Estrellas, La Recurva*, three of his best works for the stage.

Verso. In the *Revista Americana de Buenos Aires*, Amparo Rodríguez Vidal, the Cuban poetess, has published a *Canto a América*, and a series of articles on *Poetisas Norteamericanas*, which are affectionate treatments of our women poets.

Dominican Republic. The Dominican Republic was very active in matters of erudition and in the activities of the Dominican Academy of History.

Erudition. Fermín Peraza Sarausa y Alfredo del Valle, *Bibliotecas, Archivo y Museo de la República Dominicana*, a study of library facilities in the Dominican Republic; Sócrates Nolasco, *Viejas Memorias*, interesting historical articles on personages and incidents of the entire island—Haiti and the Dominican Republic; Erwin Walter Palm, *Ecos de Arquitectura Clásica en el Nuevo Mundo* [publicaciones de la Universidad de Santo Domingo, vol. xv]. Dr. Gordon Ireland, *Cursillo de Derecho Constitucional Americano Comparado* [publicaciones de la Universidad de Santo Domingo, vol. xiv], a careful analysis of the Constitutional law of England and the United States, and of the general Constitutions of Latin America; Max Henriquez Ureña, *Episodios dominicanos—La Conspiración de los Alcarrizos* (vol. 2 of the *Episodios dominicanos*,

the first volume of which is entitled *La Independencia Efímera*, which appeared in 1938).

Ecuador. From Ecuador we have received the following two books, one a bit of fiction and the other a study about fiction. The first is by Enrique Gil Gilbert, *Nuestro pan*, awarded honorable mention by the International Committee in a prize contest for unpublished novels by Latin-American authors (see details under *Peru*), and the second by Alejandro Andrade Coello, *La novela en América*, a good study.

Guatemala. We have received three volumes of erudition and one of verse.

Erudition. José Arzú, *Pepe Batres Intimo, su familia, su correspondencia, sus papeles*, a biographical and literary study by a relative who has in his possession the most exact facts and the most abundant collection of family papers; Juan M. Mendoza, *Enrique Gómez Carrillo (estudio crítico biográfico)*, two volumes, treats his life, works, and epoch; Luis Cardoza y Aragón, *La nube y el reloj, pintura mexicana contemporánea*, a fine study of Mexican art by a Guatemalan author who has lived out of Guatemala since 1920, contains 135 full-page illustrations).

Verso. José Batres Montuza, *Poesías* (11th ed. with notes by Adrián Recinos); his verse is so popular that frequent new editions are necessary.

Mexico. Mexico likewise has shown greater activity in erudition than in other genres.

Fiction. The same prize contest mentioned under *Peru* in this review, was patronized in Mexico by the Ministry of Public Education and the Monthly Review *Letras de México*, and attracted 34 original works. The judges were Alfonso Reyes, Octavio Bareda, G. Fernández MacGregor, Julio Jiménez Rueda, and Alfonso Teja Zabre. The Ministry of Public Education stimulated additional local interest in the contest by granting three national premiums of 5,000, 3,000, and 2,000 pesos. The jury awarded the first prize to *Nayar* by Miguel Ángel Menéndez, presented under the pen-name of Manuel Briseño. Although he did not win the prize in the international contest, the fact that he earned one of the three "honorable mentions" proves that he wrote one of the best four novels produced in that year throughout Hispanic America. His story is woven out of material gathered in his long residence in the regions of Nayarit, whence the title *Nayar*.

The second prize was awarded to *A los cuatro vientos*, by Gregorio López y Fuentes, and the third prize to *En la rosa de los vientos* by José Mancisidor.

Verso. Manuel Maples Arce, *Antología de la poesía mexicana moderna*, completes the beautiful anthology of Genaro Estrada of twenty years ago; Alfonso Reyes, *Algunos poemas*, a new volume of hitherto unpublished verse, written 1925–1930; and *Villa de Unión* (4 de julio de 1880), a romance, historical and personal; Enrique González Martínez, *Poemas 1939–40*, eight poems by the man who has been hailed as Mexico's greatest living poet.

Erudition. Santiago Hernández Ruiz and Domingo Tirado Benedi, *La ciencia de la educación*, vol. II of a monumental work concerning pedagogical ideas of 106 mentors from Socrates to the present; José de Acosta, *Historia natural y moral de la literatura mexicana desde los orígenes hasta nuestros días*, enlarged and corrected edition of the best outline of Mexican literature thus far published; Toribio Esquivel Obregón, *Biografía de don Francisco Javier Gamboa*, an exposition of the political philosophy of New Spain in the 18th century; Máximo Gómez y Báez, *Diario de campaña, 1868–1898*,

edited by an especially appointed committee; César Lizardi Ramos, editor, *Los Mayas antiguos*, the discussions of a group of specialists in archaeology and ethnology; Alfonso Reyes, *Pasado inmediato*, essays on Latin America by one of Mexico's foremost diplomats; *The Continental Doctrine in the Mexican Senate*, Manuel Ávila Camacho, Ezequiel Padilla, Josephus Daniels, Luis Sánchez Pontón, Jaime Torres Bodet, Pan American Day Addresses in Mexico, April 14, 1941.

Panamá. Rodrigo Miró, *Índice de la poesía panameña contemporánea*, an anthology with short biographical sketches.

Perú. Fiction and erudition about divided the honors in the production of 1941.

Erudition. José Jiménez Borja, *Cien años de literatura y otros estudios críticos*, interesting light on the development of Peruvian literature; Víctor Andrés Belaúnde, *La crisis presente, 1914-1939*—of the *Obras Completas* of the author (celebrated university professor, publicist, man-of-letters, and diplomat) this is the first volume in the *Serie Peruana*; José de la Riva Agüero, *Homenaje al Conquistador del Perú y Fundador de Lima, D. Francisco Pizarro* (appeared in the folleto conmemorativo de la Academia Peruana).

Fiction. Farrar and Rinehart, Inc., New York, in collaboration with the Division of Intellectual Cooperation of the Pan American Union, sponsored, early in 1940, a prize contest for unpublished novels by Latin American authors. Eligible manuscripts (not less than 50,000 words) were submitted before Nov. 15, 1940, to juries selected in each respective country. The winning selections were then sent to an international jury, composed of John Dos Passos and Blair Niles, of the United States, and Ernesto Montenegro, of Chile. Every Latin-American country participated, except Uruguay. More than one hundred novels were submitted, and, of these, twenty-seven were sent to the New York Committee. The award was made to Ciro Alegria for the novel, *El mundo es ancho y ajeno*. Alegria, a young man of thirty-two, from Trujillo, Peru, who has lived in Chile as a political exile since 1934, receives from Farrar and Rinehart \$1,000; from the London firm of Nicholson and Watson \$500 for British rights, from *Red Book Magazine* \$1,000, as an option for serial rights, to which will be added \$4,000 if this magazine publishes it. Furthermore Farrar and Rinehart will pay the usual royalties if the book reaches a stipulated sale, and will arrange for translation into English without cost to the author. The unusual merits of the manuscripts submitted caused the international jury to make honorable mention of three others: *Nuestro pan*, by Enrique Gil Gilbert, of Ecuador; *A Fogueta*, by Cecilio J. Carneira, of Brazil; and *Nayar*, by Miguel Angel Menéndez, of Mexico. Another Peruvian novel by Ricardo Palma, was *Tradiciones peruanas escogidas*, the first volume in the "Serie América" in the *Biblioteca Amauta*, selected, prologue, and annotated by Luis Alberto Sanchez, editor of the new series.

The *Academia Peruana de la Lengua, Correspondiente de la Española*, directed by José de la Riva Agüero, has been reorganized this year. It has completed its personnel by electing nine new academicians and by celebrating several public and solemn sessions.

Puerto Rico. *Verse.* R. Negrón Flores, *Del Amor a la Locura*, includes the tragic love story of Carmen Echevarría and the poet José de Diego, with his poem *A Laura*, and a poem by Diego placed in Carmen's mouth, *La Oración de Laura*; and *El Cristo de los Andes* a beautiful poem concerning

the history of that statue and its importance in the peaceful relations between Chile and Argentina; José Antonio Dávila, *Vendimia*, published by the Biblioteca del Ateneo Puertorriqueño.

Erudition. Concha Meléndez, professor of Spanish in the University of Puerto Rico and author of *Amado Nervo* (1926), and several other important works, has given us a very attractive, warm-hearted account of her visit to Peru after much reading of Spanish Literature, *Entrada en el Perú*; R. L. Grismer and C. I. Arroyo, *Vida y Obras de Autores Puertorriqueños*, a useful reference work.

Venezuela. **Erudition.** Bernardo Suárez, *La Venezuela de hoy y su actual gobierno*, a critical exposition of the achievement of four years under the rule of President Lopez Contreras; Alejandro de Humboldt, *Viaje a las regiones equinocciales del Nuevo Continente*, vols. i, ii, and iii, an important work put out by the Ministry of Education; Casto Fulgencio López, *La Guaira*, an account of its part in the wars for independence. The editorial "Cecilio Acosta" under the directorship of J. A. Cova has published a *Biblioteca de Escritores Venezolanos* in which several volumes have appeared, the latest of which is Mariano Picón-Salas, *Formación y Proceso de la Literatura Venezolana*, an important study, despite its brevity.

Fiction. Arturo Uslar Pietri and Julián Padrón, *Antología del cuento moderno venezolano* (Biblioteca venezolana de cultura, 2 vols.), a valuable collection of tales selected by the Minister of Education and the President of the Association of Venezuelan writers.

Drama. Eduardo Innes-González, *La Virgen del Carmen and Vivir para los demás*, two native Venezuelan comedies.

Venezuela suffered a severe literary loss in the death of one of her most versatile citizens, Francisco Antonio Rísquez (see under **NECROLOGY**)

JOHN D. FITZ-GERALD.

SPANISH GUINEA. See **SPAIN** under *Colonial Empire*.

SPANISH LITERATURE. The Spanish Government has reorganized all of the scholarly activities of Spain. The Junta Para Ampliación de Estudios and the Fundación Nacional de Investigaciones Científicas and all other similar organizations of prewar days have been merged under the title of Consejo Superior de Investigaciones Científicas. This body has reorganized research under *patronatos* and *institutos*, according to the subject of investigation. The headquarters are in the building formerly occupied by the Junta Para Ampliación de Estudios, Calle de Medinaceli 4, Madrid, Spain. The Consejo Ejecutivo is composed of President, José Ibáñez Martín, Minister of Education; First Vice-President, Miguel Asín Palacios; Second Vice-President, Antonio de Gregorio Rocabalano; Secretary, José M. Albarreda y Herrera. It will have the power to give scholarships and fellowships and to designate the persons who are to collaborate in the research in the foreign research centers. It will also attempt to systematize the scholarly publications of Spain. All of this will be carried on through *patronatos* which will coordinate the work of the numerous private and public research institutions.

Under the *patronato* Marcelino Menéndez y Pelayo are grouped the *institutos* devoted to philology, Arabic and Hebrew studies, history, Hispano-American history, art and archeology, and geography. The Instituto Antonio de Nebrija is especially devoted to philology. Its organ is the quarterly *Revista de Filología Española*. In the field of belles-lettres these organizations have al-

ready begun to produce valuable material. They have renewed the publication of the *Revista de Filología Española*; volume 25, No. 1 appeared in 1941 and will be continued. The Consejo has produced five volumes of the complete works of Menéndez y Pelayo, which began with his *Historia de las Ideas Estéticas de España*, revised and checked by Enrique Sánchez Reyes, director of the Biblioteca Menéndez Pelayo. Other publications by the Consejo are: *Anales del Jardín Botánico de Madrid*; tomo I—Año 1940 (appeared in 1941); *Revista de Bibliografía Nacional*, tomo I, Madrid, 1940; Enrique Lafuente Ferrari, *El Vitrey Iturrigaray y los Orígenes de la Independencia de México* (prologue by Antonio Ballesteros Berreta); Álvaro de Toledo, *Comentario al "De Substantia Orbis" de Averroes* (aristotelismo y averroísmo) edited and annotated by Manuel Alonso, S.J.; Carmen Fontecha, *Glosario de Voces Comentadas en Ediciones de Textos Clásicos*, Ramón Ceñal Lorente, S.J., *La Teoría del Lenguaje de Carlos Bühler*; José Pérez de Barradas, *La Familia*; Karl Vossler, *Filosofía del Lenguaje—Ensayos—traducción de A. A. y R. L.*, the publication of volume 7 of *Emerita (Boletín de Lingüística y Filología Clásica)*; Miguel Asín Palacios, *Contribución a la Toponimia Árabe de España*; Lope de Vega, *Santiago el Verde* (Teatro Antiguo Español, textos y estudios, IX, ed. by Ruth Annclise Oppenheimer); and Cristóbal Bermúdez Plata, *Catálogo de Pasajeros a Indias, Durante los Siglos XVI, XVII, y XVIII*, vol. i (1509-1534).

Another important work is published by the Consejo Superior, through the Patronato "Menéndez y Pelayo," through its Instituto "Gonzalo Fernández de Oviedo": *Historia Verdadera de la Conquista de la Nueva España* por Bernal Díaz del Castillo, Edición Crítica, Tomo I. It brings the readings of a hitherto unused manuscript called "Alegria" in the notes. The second volume will be directed by Carlos Pereyra, and will contain a series of critical studies concerning the life of the author and various aspects of his work.

Other works that have reached us are: Manuel Machado, *Poesía (Opera Omnia Lírica)*; Ricardo del Arco, *Fernando, El Católico, (Artífice de la España Imperial)*, (an attempt to show that Fernando was of greater importance than is usually acknowledged); C. Benítez de Castro, "*Se Ha Ocupado el Kilometro 6 . . .*," 2d. ed., a novel of the battle of the Ebro River from the point of view of one who took part in it and as an answer to Remarque's *All Quiet Along the Western Front*, and *El Creador* (the young author is already being hailed as one of the most original and sturdy representatives of modern novelists): Francisco Camba, *Madridgrado* (Documental Film), 2d. ed.; Francisco de Cossillo, *Taxímetro* (a delicate psychological study that will stand out among the products of the moment for the modernity, mental agility, and narrative control with which it is built); W. Fernández Flórez has produced three books; *Las Siete Columnas*, *La Novela Número 13*, and *Una Isla en el Mar Rojo*, 8th ed.; Fray Justo Pérez de Urbel, *San Isidro de Sevilla, Su Vida, Su Obra, y Su Tiempo*, a new study of the great humanist, illustrated with sixteen photographs; Mariano Puigdollers Oliver, *La Filosofía Española de Luis Vives*; Agustín de Foxá, *Madrid de Corte a Checa*, 2d. ed., corrected and enlarged, vol. i, of a series of *Episodios Nacionales*, by the Conde de Foxá; Azorín, *Valencia* and *Madrid*, (two new volumes for *La Biblioteca Nueva*).

Of the numerous volumes that have appeared in *Clásicos—Ebro*, in convenient format and good

type, five have reached us: Santa Teresa de Jesús, *Prosa Escogida*; Don Juan Manuel, *El Conde Lucanor* (selección); Tirso de Molina, *El Condenado por Desconfiado*; Cervantes, *Rinconete y La Ilustre Fregona*; and *Vida del Lazarillo de Tormes*.

The Patronato de la Biblioteca Nacional has published *Lista de Obras Ingresadas en la Biblioteca Nacional desde la liberación de Madrid hasta 1940* (the volume contains 256 pages and represents the works they have received since the close of the civil war).

In addition to the foregoing matters we have the following from Spain.

Erudition. Salvador de Madariaga, *Hernán Cortés* (2d of a series of excellent biographies of outstanding Spanish personalities, heavily annotated, and having a long *Índice General* and an *Índice Especial sobre Hernán Cortés*); Angel González Palencia, *Estudio histórico sobre La Censura Gubernativa en España, 1800-1833*, 3 vols. (monumental work divided into 54 subdivisions of genres running consecutively through the three volumes, and each work that was submitted to examination is numbered consecutively up to 734; Marqués de Lozoya, *Historia del arte hispánico*, Tomo III (542 pages, 548 illustrations, 32 full-page and in brilliant coloring; each volume of the series complete in itself, this one deals with the Renaissance and is very important); Roque Barcia, *Sinónimos Castellanos* (new, enlarged edition with better mechanical arrangement for easier reference), Juan Hurtado y J. de la Serna and A. González Palencia, *Historia de la literatura española* (fourth ed. revised and enlarged, 2 vols.); Ramón Menéndez Pidal, *Manual de gramática histórica española* (6th ed. revised and enlarged,—a standard work, very welcome in this latest edition).

Drama. José María Pemán, *La Santa Virreina* (poema dramático), first staged in Palma de Mallorca, by the Company of María Guerro and Fernando Díaz de Mendoza (very careful study of a Peruvian legend in the 17th century when the Condesa de Chinchón was Vicereine; the legend is connected with the discovery of quinine in Peru), Ramón J. Sender, *Hernán Cortés* (heroic drama).

Verso. Pedro Salinas, *Literatura española, siglo XX* (work of great importance—despite certain criticisms—for study of the complex literary movement of the early years of this century).

Fiction. Ramón J. Sender, *Mexicayótl* (a story of pre-Columbian Mexico).

JOHN D. FITZ-GERALD.

STATE, U.S. Department of. The organization of the Department of State has been adapted in recent years to meet the changing needs created by new conditions and new emphases in international affairs.

When the outbreak of war in Europe became imminent, the Special Division was established to handle special problems arising out of the disturbed situation in Europe, such as the repatriation of American citizens from war areas and the repre-

sentation in belligerent countries of the interests of other belligerents taken over by the United States. Shortly thereafter, when the need became apparent for centralization of liaison between the Department of State and the War and Navy Departments, a Liaison Office was established to coordinate the exchange of information between the Department of State and the other two Departments. Subsequent changes provided for strengthened liaison with other Government agencies and for increased collaboration in the study of certain phases of the world situation.

In connection with the increased importance of the solidarity of the Western Hemisphere, three new offices have been created: the Division of Cultural Relations, which is charged with promoting intellectual and cultural interchange with foreign countries, particularly the other American republics; the Central Translating Office, which administers a program of translating American Government documents into Spanish, Portuguese, and French for distribution in the appropriate countries; and the Caribbean Office, which was charged by a Department order of Oct. 9, 1941, with jurisdiction over such aspects of the relations of the United States with the Caribbean area as have a bearing upon housing, health, education, agriculture, labor, finance, commerce, and similar social and economic fields.

In view of the importance of economic factors in the present international situation, the Department established in 1941 a Board of Economic Operations, consisting of two Assistant Secretaries of State, the Adviser on International Economic Affairs, and the chiefs of seven Divisions (five new and two already in existence) which are charged with handling such problems as those involved in tariff policies, exports and defense aid, trade with aliens inimical to the United States, and foreign-funds control.

As a result of the recent changes, the Department may be regarded as consisting of the following groups of officers and offices.

1. The Secretary of State, the Under Secretary of State, four Assistant Secretaries of State, a Legal Adviser, three Advisers on Political Relations, and an Adviser on International Economic Affairs, an Assistant to the Secretary of State and four Special Assistants to the Secretary of State; three Special Assistants to the Under Secretary of State, and a Liaison Office directly supervised by the Under Secretary.

2. Four divisions charged with responsibility for the relations of the United States with particular regions of the world, namely, the Divisions of the American Republics, of European Affairs, of Far Eastern Affairs, and of Near Eastern Affairs.

3. The following offices which are concerned with the personnel and phases of the activities of the Foreign Service: Division of Foreign Service Administration, Foreign Service Buildings Office, Foreign Service Officers' Training School, Board of Foreign Service Personnel, and Division of Foreign Service Personnel.

4. The Divisions of Commercial Policy and Agreements, of Defense Materials, of Exports and Defense Aid, of Studies and Statistics, and of World Trade Intelligence, and the Foreign Funds Control Division and the Financial Division, all of which function as component parts of the Board of Economic Operations.

5. Some twenty-odd technical, advisory, and administrative divisions and offices, as follows: Division of Accounts, Caribbean Office, Division of Commercial Affairs, Division of Communications and Records, Office of Coordination and Review, Division of Cultural Relations, Division of Current Information, Office of Fiscal and Budget Affairs, Division of Foreign Activity Correlation, Office of the Geographer, Division of International Communications, Division of International Conferences, Passport Division, Division of Personnel Supervision and Management, Office of Philippine Affairs, Division of Protocol, Division of Research and Publication Special Division, Division of Special Research, Translating Bureau, Central Translating Office, Treaty Division, Office of the Editor of the Treaties, Visa Division.

STRATEGIC AND CRITICAL MATERIALS. The commodities included under these two headings are those announced on Jan. 30, 1940, by the Army and Navy Munitions Board. Strategic materials, as defined by the Board, are "those essential to national defense, for the supply of which in war dependence must be placed in whole, or in substantial part, on sources outside the continental limits of the United States; and for which strict conservation and distribution control measures will be necessary." The list of strategic materials is: Abaca, antimony, activated carbon, chrome ore, ferromanganese, manganese ore, mercury, mica, nickel, quartz crystals, quinine sulphate, rubber, silk, tin, tungsten ore.

Critical materials are those "essential to national defense, the procurement problems of which in war would be less difficult than those of strategic materials either because they have a lesser degree of essentiality or are obtainable in more adequate quantities from domestic sources; and for which some degree of conservation and distribution control will be necessary." The critical materials are: Aluminum, asbestos, cork, graphite, hides and skins, iodine, kapok, opium, phenol, platinum, tanning material, tuluol, vanadium ore, wool.

The Bureau of Labor Statistics issues a weekly price index for the two groups, based on August, 1939, as 100. Prices of strategic materials jumped about 25 per cent within the first month after war broke out in 1939. Thereafter, relatively slight fluctuations occurred until February, 1941, when a steady increase began. The index at the beginning of March was 129.9; April, 136.0, May, 137.6; June, 138.4; July, 139.3; August, 141.7; September, 141.8; October, 142.4; November, 143.1, December, 143.0.

Prices of critical materials rose much less sharply, the increase being about 5 per cent during the first war month, September, 1939. The index at the beginning of 1941 was 111.3. At the beginning of April it was 112.3, June, 113.8, August, 115.4; September, 116.7; October, 117.4; November, 116.8; December, 116.8.

See CHEMISTRY, INDUSTRIAL; CUSTOMS, BUREAU OF, MINES, BUREAU OF; GEOLOGICAL SURVEY; SUPPLY PRIORITIES AND ALLOCATIONS BOARD; articles on the materials, as ALUMINUM, ANTIMONY, ASBESTOS, CHROMIUM, IRON AND STEEL, LEATHER, MANGANESE, MERCURY, NICKEL, PLATINUM, RUBBER, TEXTILES, TIN, TUNGSTEN, WOOL.

SUEZ CANAL. A sea-level canal across the Isthmus of Suez, connecting the Mediterranean and the Red Sea. Operated by the French-controlled Suez Canal Company, which holds a concession from the Egyptian Government, the canal is normally the main route between maritime Europe and the ports of the Indian and western Pacific oceans.

Cargo traffic on the canal declined from the peak of 36,491,332 net registered tons in the calendar year 1937 to 29,573,394 tons carried by 5,227 ships in 1939 (see YEAR BOOK for 1940 for further 1939 statistics). No official figures for traffic were issued after the outbreak of the World War in September, 1939. In January, 1941, German bombers sank several ships in the canal and reportedly blocked traffic completely until the hulks were moved out of the way. See GERMANY under *History*; WORLD WAR.

SUGAR. The sugar beet crop in the United States in 1941 was estimated by the U.S. Department of Agriculture at 10,090,000 tons of beets from 757,000 acres, expected to produce about 1,451,000 tons (equal to 1,552,570 raw ton value) of sugar, compared with the 12,292,000 tons of beets, 916,000 acres and 1,773,000 tons of sugar in 1940, and a 1930-39 average of 9,284,000 tons of beets from 815,000 acres and 1,363,000 tons of sugar. The acre yield was 13.3 tons versus 13.4 tons in 1940 and 11.4, the 10-year average. Thus, the reduced production in 1941 was entirely accounted for by a decline in acreage. Beet sugar production in leading States was estimated for California 311,000 short tons, Colorado 299,000, Michigan 151,000, Montana 120,000, Nebraska 116,000, and Idaho 105,000 tons.

Production of sugarcane for sugar in 1941 was marked again by an unfavorable season in Louisiana and a favorable outturn in Florida. The 1941 sugarcane crop of the two States, including cane for seed, was grown on 264,000 and 31,700 acres, respectively, and was estimated as 4,488,000 and 1,109,000 tons and equivalent to 318,000 and 113,000 tons of sugar. Molasses as a sugarcane byproduct totaled 31,933,000 gal. The sugarcane sirup produced in eight Southern States totaled 18,374,000 gal. and sorgo sirup made in 17 States amounted to 11,681,000 gal.

Maple products reported by 10 States included 2,091,000 gal of sirup and 489,000 lb. of maple sugar. The unusually low production of maple products in 1941 was due largely to the very short campaign in most States. The season opened somewhat late and closed rather abruptly.

Season average prices received by growers and values of production (marketing season or crop year) were respectively estimated for sugar beets \$6.22 per ton, \$62,747,000, sugarcane for sugar and seed \$3.62 per ton, \$20,242,000, maple sugar 29.7¢ per pound, \$145,000, and sugarcane sirup 59¢ per gallon, \$10,842,000; sorgo sirup 61.5¢, \$7,180,000, and maple sirup \$1.736 per gallon, \$3,631,000. A record quantity of 7,995,377 short tons of refined sugar was delivered to the American market by manufacturers and importers in 1941. The total did not include deliveries by mainland cane mills.

The world sugar production, according to the U.S. Department of Agriculture (*The World Sugar Situation*, June, 1941), rose from 1918 to 1930 to decline slightly during early depression years and then increased to a record high in 1936. Production declined slightly during 1937 and 1938 but reached a new record high level in 1939. A world output in 1940 almost as large as in 1939 was indicated, but there were definite dislocations as between coun-

tries. Production in the main importing countries rose steadily from 1918 to 1936, while in the major exporting countries production fluctuated widely but the general level remained below that of the late 1920's.

The world's cane-sugar production for the 1940-41 season, according to estimates of Willett and Gray issued Dec. 4, 1941, amounted to 19,262,153 tons. Production in leading world areas was for United States—Louisiana 210,229 tons, Florida 90,178, Puerto Rico 832,140, Virgin Islands 7,500, and Hawaii 865,000; Cuba 2,440,990; Jamaica 156,391; Dominican Republic 400,711; Mexico 320,000; Peru 460,000; Argentina 540,374; Brazil 1,272,405; British Guiana 190,000; British India, gur (low grade) 3,739,484, and white sugar 1,275,200; Java 1,750,000; Japan 980,544; Philippine Islands 1,028,354; Australia 808,000; Mauritius 316,250, Natal 511,607, and Egypt 175,000 tons. The world's beet-sugar production in 1940-41 was estimated to total 10,847,260 tons, including United States 1,575,423, Canada 95,350, Germany 2,342,000, Czechoslovakia 520,000, Poland 500,000, U.S.S.R. (Russia and Ukraine) 2,700,000, Great Britain 485,000 and Ireland 68,893, Italy 475,000, Sweden 300,000, France 238,000, Belgium 255,543, Netherlands 292,950, and Denmark 236,667 tons. The grand world total for 1940-41 was estimated at 30,109,400 tons compared to 30,498,810 tons in 1939-40 which comprised 19,377,407 tons of cane-sugar and 11,121,403 tons of beet-sugar. For sugar cane and beet insects, see ENTOMOLOGY, ECONOMIC.

SULFATHIAZOLE. See FOOD AND DRUG ADMINISTRATION; MEDICINE AND SURGERY under *Chemotherapy*

SULPHUR. The United States has enough sulphur to meet all the demands of World War II. The year 1941 saw sulphur production break all previous records. Domestic deposits (principally in Texas and Louisiana) produced 3,139,253 long tons of crude sulphur in 1941, according to the U.S. Bureau of Mines. This was a 15 per cent increase over 2,732,088 long tons in 1940. Shipments for the year were approximately 3,401,410 long tons, compared with 2,558,742 in 1940. Above-ground stocks of mined sulphur totaled almost 4,200,000 tons even after the industry had fulfilled the demands of both civilian and military needs. Exports went chiefly to the various parts of the British Empire. Shipping by canal, river, and rail rose sharply to various inland and Canadian consumers. Exports of crude sulphur amounted to 474,551 long tons, for the period January-September, 1941, compared with 746,468 tons in the full year 1940. Exports of refined sulphur were 55,289,420 lb. for January-September, 1941, and 44,229,114 lb. for all of 1940. Sulphur imports were 20,954 long tons (January-September, 1941), chiefly from Canada. No sulphur ore was imported in 1941. The price remained unchanged throughout the year at \$16 f.o.b. mines, but the cost of transportation rose 200-300 per cent.

Sulphur is an important raw material in the manufacture of explosives and is used in the form of fuming sulphuric acid for this purpose. About 1,000 tons of acid a day were put into explosives in 1941. This called for and got rapid expansion of the nation's capacity for producing sulphuric acid.

The War Department and industry together worked out the coordination of the production of sulphuric acid with the production of explosives and the recovery of acid for reuse. The addition of extra equipment to existing acid plants was sufficient to cope with the increased demand on the industry.

SUNSPOTS. See ASTRONOMY.

SUPPLY PRIORITIES AND ALLOCATIONS BOARD (SPAB). President Roosevelt established the Supply Priorities and Allocations Board on Aug. 28, 1941, by executive order which set it up as a portion of the Office for Emergency Management. This order set forth the Board's duties as follows: "Consistent with the basic defense policies of the President, the Supply Priorities and Allocations Board shall: (a) Determine the total requirements of materials and commodities needed respectively for defense, civilian and all other purposes; establish policies for the fulfillment of such requirements, and, where necessary, make recommendations to the President relative thereto. (b) Determine policies and make regulations governing allocations and priorities with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel and other commodities among military, economic defense, defense aid, civilian and other major demands of the total defense program."

Thus brought into being as the principal policy-making body with respect to the use of the nation's physical resources, SPAB began by charting the general course along which the nation's defense effort should be made, laying down the policies that "we must forego the less essential that we may have an abundance of the more essential," and that "this means cutting off the fat and hardening the muscles."

At succeeding meetings, SPAB laid down more definite policies designed to insure the best possible utilization of the nation's resources. In the fields of building construction and public and private electric power construction, for example, SPAB ruled that priorities assistance should not be extended for any new projects whatever unless such projects were clearly essential to national defense or necessary for the public health and safety. In line with this, it also held that there should be no expansion of facilities for strictly civilian production if that expansion would require the use of appreciable quantities of critical materials.

Early in its career, SPAB paved the way for over-all planning of the use of America's productive capacity by directing the speedy compilation of detailed schedules of both military and civilian requirements as far in advance as possible. Subsequently, it called for substantial expansion of domestic production of critical materials, denied the use of steel plate for construction of a projected Texas-to-New York pipe-line on the ground that other needs for this material were more essential, and approved an Office of Production Management proposal for expansion of steel productive capacity by 10 million tons annually.

Within a few weeks of the time SPAB was set up, it became apparent that shortages of most of the critical materials had become so acute that the existing priority rating system would not be adequate to meet the situation. Accordingly, it directed the Office of Production Management (q.v.) to work out an allocation system for steel, and followed that by calling on OPM to prepare as speed-

ily as possible for allocation of critical materials to all major industries. To make certain that everything possible was being done to expand the nation's supply of these materials, it singled out one of the most important—copper—and directed OPM to hold an inquiry into all possible ways of increasing production.

In general, SPAB functioned throughout the final quarter of 1941 as a policy-making body, leaving the administrative part of the task to OPM and other agencies. Upon America's declaration of war on Japan on December 8, SPAB sounded the keynote for an all-out effort by declaring: "It is clear that a vastly expanded national effort is imperative. Production schedules for all manner of military items must be stepped up at once. Every activity of our national life and our civilian economy must be immediately adjusted to that change. To attain victory we aim at the greatest production which is physically possible."

On Jan. 16, 1942, President Roosevelt issued an executive order which abolished SPAB and set up in its place the War Production Board (WPB), whose chairman was charged with final authority over procurement and production under the war program. The War Production Board took over the functions and responsibilities previously exercised by SPAB and by the Office of Production Management.

DONALD M. NELSON.

SUPREME COURT. See LAW. For decisions, see also the subject, as LABOR CONDITIONS, NATIONAL LABOR RELATIONS BOARD, NEWSPAPERS AND MAGAZINES, WAGE AND HOUR ADMINISTRATION.

SURGERY. See MEDICINE AND SURGERY.

SURINAM (Netherlands Guiana). A colony on the northern coast of South America, belonging to The Netherlands Area, 54,291 square miles; population (Jan. 1, 1940), 177,980, including the Indians and Negroes living in the forests. Paramaribo (the capital and chief port) had 54,853 inhabitants. Vital statistics (1939): 4,740 births, 1,876 deaths, and 463 marriages. Education (1939): 120 schools and 21,278 students.

Production and Trade. Sugar, coffee, cacao, bananas, rice, maize, rum, bauxite (615,434 met tons, 1940), gold (15,921 fine oz., 1940), salt, timber, and balata are the main products. Livestock (1939): 22,616 cattle, 7,315 swine, and 5,723 goats. Trade in 1940 (in U.S. dollars): \$4,544,000 (\$4,204,000 in 1939) for imports and \$3,910,000 (\$4,245,000) for exports. The United States sent 57.5 per cent of the imports and took 90.4 per cent of the exports. Bauxite accounted for 86.7 per cent of the total value of exports in 1940. Shipping (1939): 452 vessels of 523,600 register tons cleared.

Government. Budget estimates (1941): 6,443,817 guilders for revenue and 6,440,680 guilders for expenditure. The executive authority and administration are under the control of a governor, assisted by an advisory council. There is a representative body called the States of Surinam consisting of 15 members (5 appointed by the governor and 10 elected by the voters). Governor, Dr. J. C. Kielstra (appointed Aug. 16, 1933).

History. Under an agreement reached with the government of the Netherlands in London, it was announced from the White House in Washington on Nov. 24, 1941, that the United States of America ". . . has agreed to send a contingent of the

United States Army to Surinam to cooperate with the Netherlands forces in assuring the protection of the bauxite mines in that territory. This contingent will, of course, be withdrawn as soon as the present danger to the mines is removed and at the latest at the conclusion of hostilities.

"Simultaneously the government of the Netherlands has invited the government of the United States of Brazil to participate in this defense measure. It is understood that Brazil will contribute to the common aim by exercising an especial measure of military vigilance in the frontier zone adjacent to Surinam and by sending a mission to Paramaribo to exchange information . . . to assure maximum efficiency of the safety measures thus being jointly undertaken by the Brazilian, United States, and Netherlands forces.

"The government of Brazil has indicated its whole-hearted approval of the emergency measures. At the same time the government of the United States has notified the governments of the American republics of the foregoing arrangements which have been reached in the interests of all."

It was reported from Rio de Janeiro, Brazil, that United States troops had raised their flag in Surinam at 1:15 p.m. on Nov. 23, 1941. Commenting on the arrival of the American troops the newspaper *Surinamer* (Nov. 27, 1941) welcomed them "as co-guardians of the safety of this part of South America." The newspaper added "The Americans come here as collaborators and co-defenders not as intruders or deliverers."

See BRAZIL and NETHERLANDS, under *History*; MILITARY PROGRESS; UNITED STATES under *Latin America*.

SURPLUS FOOD, SURPLUS MARKETING ADMINISTRATION. See AGRICULTURE, U.S. DEPARTMENT OF; LIVESTOCK; RELIEF.

SVALBARD. An arctic archipelago (10° to 35° E. and 74° to 81° N.) owned by Norway. The principal islands are West Spitsbergen (or Mainland), North East Land, Prince Charles Foreland, Edge Island, Barents Land, King Karl's Land, Hope Island, and Bear Island (69 sq. mi.). Total area, 24,294 square miles; population (winter of 1938-39), 2,210. Green Harbor (capital), New Aalesund, Coles Bay, Longyearbyen, and Braganza Bay were the main settlements, all on the western coast of West Spitsbergen. Coal was the chief product (627,000 metric tons exported during 1938). Iron, asbestos, and gypsum have been found. It was announced on Sept. 9, 1941, that Canadian, British, and Norwegian forces had occupied Svalbard and set fire to coal and oil dumps, destroyed the coal mines, and taken over the wireless stations. The archipelago commands the route over which supplies from Great Britain to the Russian port of Murmansk can be sent.

SWAZILAND. See BRITISH EMPIRE.

SWEDEN. A constitutional monarchy of Scandinavia. Capital, Stockholm. Sovereign, Gustaf V, who succeeded to the throne Dec. 8, 1907.

Area and Population. Area, 173,341 square miles; population, estimated on Jan. 1, 1941, at 6,371,000 (6,250,506 at 1935 census). Of the 1941 population, 3,990,000 lived in rural and 2,381,000 in urban districts. The birth rate per 1,000 of population was 15.0 in 1940 (15.3 in 1939); death rate, 11.4 (11.5). Immigrants in 1939 numbered 7,178; emigrants, 3,580. Estimated populations of the chief cities on Jan. 1, 1940, were: Stockholm, 583,-

621; Goteborg, 280,602; Malmö, 154,270; Norrköping, 70,379; Hälsingborg, 62,099.

Defense. As of Jan. 1, 1941, Sweden's active army numbered about 140,000 men and trained reserves 460,000. There were approximately 1,000 men in the active air force and no reserves. The navy at the beginning of 1941 comprised 2 cruisers, 8 coast defense ships, 10 destroyers, 16 torpedo boats, 16 submarines, and various auxiliary craft. See below under *History*.

Education and Religion. Schooling is compulsory and there is practically no illiteracy. Of 761,287 children of school age (7 to 14 years) in 1936, 666,060 were attending elementary schools. In 1939 there were 51,479 pupils in 139 public secondary schools, 6,038 in 57 people's high schools, 3,700 pupils in 2 high and 9 elementary technical schools, 5,091 students in the two state universities (Uppsala and Lund), 2,536 students in private universities at Stockholm and Goteborg, and 894 students in the state faculty of medicine in Stockholm. According to the 1930 census, there were 6,653 Jews, 4,763 Roman Catholics, 3,981 Methodists, 805 Baptists, and 1,499 members of other minority creeds. The rest of the inhabitants adhered to the state-recognized Lutheran Protestant Church.

Production. The estimated national income rose from 9,107,000,000 Swedish crowns in 1936 to 11,510,000,000 in 1939. Of the 1939 income, industry and crafts accounted for 15,248,000,000 crowns; domestic trade, 1,740,000,000; agriculture, and fishing, 1,061,000,000; building and construction, 1,019,000,000. Estimated yields of the chief crops in 1940 were (in metric tons): Wheat, 454,500; barley, 192,600; rye, 296,100; oats, 1,144,900; potatoes, 1,868,317 in 1939; sugar beets, 1,899,870 in 1939; fodder roots, 2,348,937 in 1939, hay, 5,121,938 in 1939.

Estimated mineral and metallurgical production in 1940 was (in metric tons): Coal, 450,000; iron ore, 14,000,000; pig iron, 700,000; steel ingots, 1,151,914 in 1939; manganese ore, 6,000; tungsten, 200; copper, 10,000; zinc, 32,000; aluminum, 1,400. Peat output in 1940 was 150,000 tons. Shale oil production rose from 3 tons daily at the beginning of 1941 to nearly 30 tons daily at the year's end. Merchant ships delivered in 1940 totaled 190,000 tons dead weight (312,000 in 1939).

Foreign Trade. Notwithstanding substantial price increases, the value of 1940 imports declined to 1,999,266,000 crowns (2,498,685,000 in 1939), while exports fell to 1,337,936,000 crowns (1,888,634,000 in 1939). Import price index for 1940, 182 (123 in 1939); export price index, 148 (117). Trade in the chief commodity groups in 1940 was (in thousands of crowns): Animal and vegetable products, imports 304,243, exports 72,757; minerals and metals, imports 679,305, exports 490,933; chemicals and pharmaceuticals, imports 176,207, exports 43,756; hides, skins, rubber, textile materials, imports 371,372, exports 33,555; wood goods, pulp and paper, imports 28,472, exports 485,658; machinery, vehicles, instruments, imports 439,667, exports 211,277. In 1939 Germany supplied 24.8 per cent of the imports; United States, 16.6; United Kingdom, 13.0. Of the exports, the United Kingdom took 22.5 per cent; Germany, 19.5; United States, 9.5.

Finance. Budget estimates for the fiscal year ended June 30, 1942, placed revenues at 2,082,000,000 crowns and expenditures at 1,889,000,000. Actual revenues for 1940-41 were 2,029,000,000 crowns and the final deficit was 1,609,000,000

crowns against a deficit of 924,000,000 crowns in 1939-40. The national debt rose from 3,625,019,-843 crowns on June 30, 1939, to 5,997,000,000 crowns on Oct. 31, 1941. At the official exchange rate in 1941 (4.175 crowns = \$1) the Swedish crown (krone) was equivalent to \$0.2395. Its average exchange rate was \$0.2399 in 1938 and \$0.2380 in 1939.

Transportation. Sweden in 1941 had about 10,381 miles of railways, about 55,000 miles of highways (see *ROADS AND STREETS*), and air lines connecting with Helsinki, London (irregularly), and the chief cities of German-dominated Europe. Under legislation passed in 1939, all railways will be state-owned and operated by 1943. At the end of 1941, 90 per cent of the State Railways' trackage was electrified. Operating income of State Railways in 1940, 361,000,000 crowns, expenditures, 267,-000,000 crowns. Traffic statistics of the Swedish air transport company in 1940 and 1939 were: Passengers, 32,000 in 1940 (60,000 in 1939); miles flown, 1,056,380 (1,802,060); express, 881,-840 lb. (1,126,551); mail, 507,058 lb. (1,272,-054). Due chiefly to war sinkings, the Swedish merchant fleet declined from 1,582,000 gross tons in July, 1939, to 1,480,000 gross tons in July, 1941. Up to June, 1941, 99 ships of 264,830 gross tons had been sunk and 26 vessels of 46,923 gross tons seized by belligerents.

Government. The Constitution of 1809, as subsequently amended, vested executive power in a hereditary King, acting under the advice of a Council of State (Cabinet), which is responsible to the Diet or Riksdag. The Upper Chamber of the Riksdag has 150 members, one-eighth of whom are elected annually by provincial and city councils; the Lower Chamber, 230 members, elected by direct male and female suffrage for four years. The composition of the Lower Chamber elected Sept. 15, 1940, was: Social Democrats, 134; Conservatives, 42; Agrarians, 28; People's party, 23; Communists, 3. A coalition Government including representatives of the Social Democratic, Agrarian, Conservative, and People's parties was appointed Dec. 13, 1939, with Per Albin Hansson (Social Democrat) as Premier. For the other members of the Cabinet, see *YEAR BOOK* for 1940.

HISTORY

Strains on Neutrality. The Swedish Government and the great majority of the people clung to neutrality during 1941 as the sole hope of avoiding involvement in the rapidly expanding world conflict. But the task proved increasingly difficult. The Nazi occupation of Norway in 1940 had cut Sweden off from the anti-German world and ended the possibility of effective military support from the Allied powers. Consequently the Swedish authorities felt obliged to make more and more concessions under constant German political and economic pressure.

The German-Finnish war against the Soviet Union, beginning June 22, made Sweden's position even more delicate and dangerous. Previously most Swedes had hoped that an Allied victory over Germany would free them from the threat of Nazi domination. But the Anglo-Soviet alliance increased the possibility of Soviet control over Finland and the Reich in the event of an Allied triumph. This prospect, bearing an obvious menace to Swedish independence and democratic institutions, caused even greater apprehension. It led the Stockholm Government to aid Finland in various ways short of war and to modify its strict neutrality so as to favor Germany against Russia.

During the last quarter of the year two events occurred that again swung Swedish official and unofficial sentiment strongly in favor of the anti-Axis coalition. One was the institution of martial law and harsh measures of repression by the German military authorities in Norway (q.v.). The other was the entrance of the United States into the World War. This strengthened Swedish belief in an Allied victory that would not endanger the independence and existing political institutions of the small European countries.

Defense Preparations. Meanwhile Sweden was feverishly strengthening its armed forces as a deterrent to violation of its neutrality. The budget for 1941-42 (see *Finance*), introduced in the Riksdag on January 11, placed supreme emphasis upon defense, which was then costing the nation an average of 70,000,000 crowns monthly. About the same time the conscription period was lengthened to a year or more. Development of a new air base at Lulea and further expansion of the air, land, and naval forces was provided for. Launching another 500,000,000 defense loan on January 19, Foreign Minister Guenther pointed out that defense expenditures had risen from 148,000,-000 crowns in 1938 to 2,400,000,000 crowns in 1941. By the beginning of June, subscriptions to the loan had reached 583,000,000 crowns. In the latter month it was estimated that 42,000 industrial workers were engaged on defense orders. A severe setback to defense preparations occurred September 17 when three modern destroyers were lost through a seemingly accidental explosion and fire in the Stockholm naval yard.

In mid-March numerous army reserves were called to the colors. This move was followed by Premier Hansson's emphatic declaration of March 25 that neither Sweden's territory nor resources would be put at the disposal of any belligerent. These developments coincided with further German demands for military cooperation and a large increase in the staff of the German Legation in Stockholm. About the same time Dr. Paul Walter, chief of the German commercial delegation in Stockholm, warned a group of leading industrialists that "countries politically against us cannot expect a generous commercial policy from our side."

The largest military maneuvers ever held in Sweden were staged during the spring in the extreme north, near fortifications built by the Swedes during the World War to check a possible attack from Russia. This indicated to foreign observers that Swedish policy anticipated an early collision between Germany and the U.S.S.R., and that the Government was preparing to throw in its lot with the Reich if forced to choose between the two powers. Yet the admission of German troops into Finland late in April, signifying at least partial abandonment of Finland's neutrality, aroused the gravest misgivings in Sweden. A controversy between the Swedish and Finnish press ensued, with leading Swedish newspapers protesting that neutral Sweden could not continue its close collaboration with Finland under these circumstances.

Finnish-German Pressure. Aroused by the German conquest of Yugoslavia and Greece, nearly 1,000,000 Swedes on May 1 participated in demonstrations of national solidarity under the slogan "freedom above everything, for him who is worthy of it." Premier Hansson again proclaimed Sweden's determination to preserve its freedom, independence, and neutrality at any cost. Before flying to Helsinki, on May 6 to return the Finnish Foreign Minister's visit to Sweden three weeks earlier,

Foreign Minister Guenther announced that his Government would support Finland in its reconstruction efforts and in defense of its national liberty. He said, however, that this did not imply unfriendly feelings toward any other powers, including the Soviet Union. The policy of "absolute neutrality" was reaffirmed by King Gustaf on May 25, and by other government spokesmen on June 6, Sweden's flag day.

Nevertheless Sweden yielded to the growing German pressure in important respects. Some weeks before the Nazi attack upon Russia, a German military mission was reported to have conferred with officers of the Swedish general staff on Soviet defenses in the north. Following German complaints of Communist activities in Sweden, the Swedish police raided Communist centers throughout the kingdom on June 4 and arrested some 20 persons. Reported German and Soviet fleet movements in the Baltic led the Swedish Minister of Education on June 6 to declare that a threat to the strategic Swedish island of Gotland was "a threat to the heart of Sweden."

On June 25 the Swedish Government announced that at the demand of Germany and Finland it had agreed to permit the transit of one division of German troops from Norway to Finland across Swedish soil "under a form which will protect Swedish sovereignty." This action was approved at a three-hour secret session of Parliament. In announcing the decision, a spokesman of the Foreign Office said that Sweden was not taking sides with any of the main belligerent powers but only with Finland and this for "special purposes." On the same day, the Government called more reservists to the colors.

There was strong internal criticism of the Government for granting the German-Finnish demand, especially after the German press interpreted the move as Sweden's adhesion to Hitler's "new order" in Europe. Replying to this criticism on June 29, Premier Hansson declared that the transit permit was issued under heavy German pressure and only after "many hesitations." A formal protest was lodged by the British Government.

A Government communiqué of August 6 tacitly admitted flights of German planes to Finland across Sweden, passage of German warships through Swedish territorial waters, and the transit on Swedish railways of war materials and supplies to the Finnish front and of wounded Germans being sent from Finland to Norway. All this was declared compatible with the rules of international law.

As during the Russo-Finnish war of 1939-40, the Swedish Government permitted the recruiting of Swedish volunteers to fight with the Finnish army. It also approved a Finnish appeal for foodstuffs and other supplies for the use of both the military and civilian population, including 5,000 tons of flour, 1,500 tons of canned meat, 1,300 tons of butter, and 400,000 rations of dried food. But the Swedes turned a deaf ear to both German and Finnish demands for their military participation in the Russian war. A two-months' campaign by German and Swedish Nazis to recruit Swedish volunteers for the German army yielded ten men.

Equally unsuccessful was an effort by the Propaganda Ministry in Berlin to stimulate rivalry between Sweden and Finland for "leadership of the north." Newspapers in Sweden, Finland, and so far as they were able, in Denmark and Norway, all ridiculed the idea of a "leading" Scandinavian state. Yet on September 24 Sweden was compelled to make a 100,000,000-crown clearing advance to

the Reich. On December 19, a new Swedish-German trade agreement covering 1942 was concluded.

Effect of Events in Norway. The Swedish reaction to the events of September in Norway (see NORWAY under *History*) demonstrated the underlying unity of the northern countries. The Swedish press of virtually all shades of opinion joined in denouncing the German martyrdom of Norwegian patriots and in repudiating Hitler's "new order." The Swedish Trades Union Congress paid ceremonial tribute to the executed Norwegian labor leaders and adopted a resolution acclaiming them as "martyrs in their fight for Norway's freedom." On September 20 Prime Minister Hansson again stated Sweden's "fixed determination . . . to maintain our position as a free nation, standing outside of the war."

Earlier in the year (March), the Swedish Government requisitioned nine Norwegian vessels in Swedish harbors and placed them at the disposal of the Swedish Traffic Commission. On April 8 a new trade and clearing agreement was made with the Quisling administration in Norway whereby Sweden was to receive some 60,000,000 crowns worth of Norwegian products for 55,000,000 crowns worth of Swedish goods.

Support of Finland. After a secret debate on foreign affairs before the Riksdag, Foreign Minister Guenther on October 29 proclaimed both Sweden's solidarity with Finland and its determination to remain neutral in the struggle among the great powers. Shortly afterward Prime Minister Rangell of Finland went secretly to Stockholm to consult with Swedish officials on Finland's course with respect to the Anglo-American demand that it suspend hostilities against Russia. The British declaration of war on Finland on December 7 confronted the Swedes with new difficulties. Negotiations were begun in London to prevent modification of the British policy of permitting limited imports into Sweden from overseas.

U.S. Relations. The U.S. Government during the later part of 1940 and 1941 applied to Sweden some of the restrictions imposed upon American trade with Axis and Axis-controlled countries. As a result of Washington's refusal in 1940 to issue export licenses for 144 pursuit planes ordered by Sweden in the United States, the Kingdom of Sweden on July 3, 1941, filed suit in a New York Federal Court for cancellation of its letter of credit covering purchase of the planes and for damages of \$7,039,188 against Vultee Aircraft, Inc., for nondelivery of the planes. On December 13 the United States seized the 20,067-ton Swedish passenger liner *Kungsholm*, laid up in New York harbor.

Economic Conditions. A continued decline in production of consumption goods and the extension of the rationing system were major economic trends during 1941. Increasing concentration of industry upon armament production and government public works projects kept industrial activity at approximately the 1935 depression level, but even the armament and public works programs were handicapped by the growing lack of fuel and especially by Germany's failure to deliver the promised quantities of coal, coke, and coke pig iron, upon which the Swedish iron and steel industry was dependent.

Some relaxation of the sea blockade was obtained through negotiations with both Britain and Germany. Each country authorized five Swedish ships to pass through the blockade monthly under certain conditions. As a result Sweden was able to

export some of her more expensive manufactured products and to import much-needed food supplies. Rapid progress was made in developing domestic supplies of commodities that were previously imported. By Apr. 15, 1941, a total of 46,937 motor vehicles had been converted for the use of wood gas and other petroleum substitutes. A number of pulp factories were converted for the manufacture of fuel alcohol and feedstuffs from wood. The shale oil industry was expanded. See also *Production*.

The Government assumed wider control over agriculture and all other departments of the national economy. A law was passed compelling farmers to raise sugar beets at government-fixed prices. The sugar beet acreage was reduced 15 per cent to permit increased production of more urgently needed crops. There were further successive increases in the tax burden. A new Price Regulation Law of June 16 gave the Government increased control over prices. All the emergency powers assumed by the Government in June, 1939, were extended into the summer of 1942.

As a result of trade agreements with Germany, Denmark, Norway, and Finland and the passage of Swedish ships through the British blockade, the food situation remained fair. At the end of December the rationing of clothes was ordered, effective Jan. 6, 1942.

See FINLAND and NORWAY, under *History*; BIRTH CONTROL; CHEMISTRY, INDUSTRIAL; LABOR CONDITIONS under *Employment and Wages*; LIVE-STOCK; MUSIC; NAVAL PROGRESS; SOCIALISM.

SWEDISH LITERATURE. Swedish authors produced in 1941 a body of literature comparing favorably in quantity with preceding years and maintaining a reasonably high average of quality, particularly in the novel and lyric poetry. Some less important volumes of short stories appeared, together with an occasional rather significant volume of essays and reminiscences. The drama seems to have been poorly represented. The usual large number of translations into Swedish appeared, chiefly novels and books about World War II.

The older generation of Swedish authors has not been especially active during the year, only an occasional volume coming from their pens, and none of these represent particularly significant literary developments. Among these is Sten Selander's volume of verse, *Sommarnatten* (*The Summer Night*), reflecting primarily a deepening response to nature; Ludvig Nordstrom's *Den flugiga världen* (*That Curious World*), a rather brilliant log-book of travel impressions from coastal Norrland; and Carl Larsson i By's *Den gamla goda tiden* (*The Good Old Times*), a collection of short stories dealing realistically with the more heroic sides of Swedish peasant life some generations ago. To these may be added a volume of posthumously published reminiscences from childhood *När kastanjerna blommade* (*When the Chestnut Trees Blossomed*) by Verner von Heidenstam, a very welcome addition to the sparsely represented biographical material at present available on one of Sweden's central cultural figures in our century. Swedish literary life has sustained very serious losses during the year in the deaths of Hjalmar Söderberg, Albert Engström, Erik Lindorm, Torsten Fogelkvist, and the young Karin Boye. From Fogelkvist's pen came posthumously *I totalitetens skugga* (*In the Shadow of Totalitarianism*), a last testament, in the form of a series of brilliant essays, expressing an uncompromising anti-totalitarian point of view on modern world problems.

The younger generation of authors has been not only more active than their older colleagues during the year, but in the main they may perhaps be said to have been more *significantly* active, though they cannot be said to have produced any single work of definitely major importance. Among the more important novels are Vilhelm Moberg's *Rid i natt!* (*Ride Tonight!*), a powerfully conceived historical novel, dealing with the struggle between Småland peasants and an oppressive race of foreign-born Swedish noblemen, and pointing in a scarcely veiled manner to the possibility of a parallel in Sweden's immediate future; and two novels by Gosta Carlberg, *Hotell Zions nya gäst* (*The New Guest at Hotel Zion*) and *En riktig människa* (*A Real Human Being*), which reveal a new Carlberg, more direct, less labored, and less mystifying than the novelist we know from the brilliant, though somewhat chaotic *Baren varandras bördor* (*Bear One Another's Burdens*) of a few years ago. Other less important efforts in fiction are Ivar Lo-Johansson's *Jordproletarerna* (*The Proletariat of the Soil*), Waldemar Hammenhog's *Svar med amatorfoto* (*Answer with Amateur Photograph*), Sven Stolpe's historical novel *Dobeln* and his *Världen utan nåd* (*The World without Grace*), and Gunhild Tegen's *Du blir aldrig gift* (*You Will Never Marry*).

Lyric poetry can perhaps not be said to be as strongly represented in 1941 as in 1940; but the year did see the appearance of at least two definitely significant volumes of verse from the younger generation of poets—Johannes Edfelt's *Sång för reskamrater* (*Song for Travelling Companions*) and Gunnar Ekelof's *Färesång* (*Song of the Ferry*).

A very worthy addition to books dealing with the Finno-Russian war of 1939 is the beautifully written book *Blod och sno* (*Blood and Snow*) by Peter William Nisser, who at the age of 20 served as a Swedish volunteer in the Finnish army. Of the Swedish books that seek to come directly at grips with broad political and cultural problems of the day, Alva and Gunnar Myrdal's *Kontakt med Amerika* has attracted perhaps the widest attention.

ALRIK GUSTAFSON.

SWIMMING. Outstanding performances by 17-year-old William Smith Jr. of Honolulu, a one-sided victory by the Alexander House Community Association of Hawaii in the men's national A.A.U. outdoor championships, and a complete upset triumph by the nymphs of the Riviera Club of Indianapolis in the women's outdoor national classic were the distinguishing events in swimming during 1941.

Smith splashed through to stamp himself as the greatest middle-distance swimmer of all time. He lowered world's free-style records from 220 yards to 800 meters. In outstanding form, he covered 800 meters in 9:50.9 in a 100-meter pool, equal to about 9:43 in a 50-meter pool, the length of course over which was set a tabled standard of 9:55.8. He shaded the time for 220 yards to 2:07.7 and 440 yards to 4:38.5, smashing the 400 meters record also with the latter mark.

The Alexander House swimmers, led by Smith, for the third successive year showed little pity, as they far overshadowed the rest of the field, easily overcoming the indoor champions of Chicago Towers Club, next in line, 71 to 21.

As Adolph Kiefer of the Chicago Towers Club again proved his supremacy by breaking ten standards, and Joe Balmores of Hawaii cut the United States long-course time for the 300-meter medley to 3:56.9, they proved the validity of the A.A.U. in acclaiming, for the year, 119 records.

Leading women swimmers were Nancy Merki, of

the Multnomah A.A.A. of Portland, Oregon, who dropped course records for 800 meters to 11:15.9 and 1,500 meters to 22:12.2; Gloria Callen, New York, in a long-course dorsal record of 1:17.5 for 100 meters; Lorraine Fischer of the New York W.S.A., in cutting the short-course breast-stroke standards for 100 meters to 1:22.9; Patty Aspnall of the Riviera Club of Indianapolis, making 3:07.8 for 220 yards; Helene Rains of the New York W.S.A., short-course mark of 4:32.9 for the 300-meter medley; and the Riviera quartet, long-course record of 10:30.7 for the 800-meter relay.

In diving, Earl Clark of Ohio State University won both the springboard and platform titles; Helen Crenkovich, San Francisco, duplicated the feat in the women's division.

Michigan captured the N.C.A.A. and Big Ten championships. Yale led in the East and California reigned on the Pacific Coast.

SWISS LITERATURE. Literary production in Switzerland was decisively influenced by four factors: the war, a strong interest in national history, the National Exhibition of 1939 in Zurich, which had aroused a wave of patriotism, and the 650th anniversary of the Swiss Confederation celebrated Aug. 1, 1941. Of the purely patriotic literature the following publications are of lasting significance: *Die Schweiz im Spiegel der Landesausstellung* (3 vols., text in German, French, Italian; third volume devoted exclusively to Swiss Art), *Heisst ein Haus zum Schweizerdegen*, by Emanuel Stuckelberger (2 vols., 1,000 years of Swiss cultural history), *Grosse Schweizer* (110 biographies of persons prominent in Swiss history), by M. Hüllmann, *Die Schweiz* (A Swiss national yearbook), by A. Latt; *Urschweiz, Heimat des Vaterlandes*, by W. Laubli and H. Steger.

Political topics are discussed by Gonzague de Reynold, *Défense et illustration de l'esprit suisse*, and *Qu'est-ce que l'Europe? Les origines*, by Denis de Rougemont, *Mission ou démission de la Suisse*; by Edmond Bille, *Le carquois vide (Souvenirs d'un arbalétrier 1914-1918)*, and by Giuseppe Motta *Testimonia temporum* (Selected addresses and essays).

Notable works in art and history were by Georg Schmidt, *Schweizer Malerei und Zeichnung im 15. und 16. Jahrhundert*; W. Y. Müller, *Die Kunst Ferdinand Hodlers* (vol. 2); Hans Jenny, *Kunsthändler durch die Schweiz*; Emil Ermatinger, *Zürich im Spatrokoko*; L. Mazzucchetti and A. Lohner, *Die Schweiz und Italien* (200 years of cultural relations). A new edition of Ulrich Zwimgli's publications was started in Zurich, *Der Prediger* (2 vols.).

For genealogical studies, *Familiennamenbuch der Schweiz*, by Ulr. Stampa, is indispensable. Swiss historical and heroic legends are presented by Gonzague de Reynold in *Contes et légendes de la Suisse héroïque*.

Oskar Eberle and the leading Swiss playwright, Caesar von Arx, joined forces in producing an impressive *Bundesfestspiel* (National Pageant) at the celebrations of August 1 in Schwyz, while the allegorical pageant, *La cité sur la montagne*, by Gonzague de Reynold, also enjoyed great popularity. Denis de Rougemont and Arthur Honegger presented the national oratorio *Nicolas de Flue*. Other dramatical productions were *Gilberte de Courgenay* (patriotic), by Maeglin and Haug; *Romanze in Plüsch* (unhappy love), by Caesar von Arx; *Frymann* (the value of gold), by Johannes Guggenheim; *Pestalozzi* (mysterious drama), by Albert Steffen; *Die vier Füssler* and *Der Bürgermeister von Zürich* (a Hans Waldmann tragedy taken from

15th-century Swiss history), by H. F. Schell. Of the older Swiss-Dutch authors, Otto von Greyerz (died 1940) is still a favorite.

Among the publications in French, C. F. Ramuz' *Oeuvres complètes*, in 20 volumes, appeared in Lausanne. Maurice Zermatten made a strong impression with three books in prose: *Contes des hauts pays du Rhône* (also in German), *Le coeur inutile* (also in German), *La colère de Dieu*. Also were the anthologies *La vie romantique du pays romand* and *Sociétés des écrivains suisses, Vingt-huit écrivains de la Suisse romande* (verses and prose). (See also FRENCH LITERATURE.)

In Italian was the anthology, *Scrittori della Svizzera italiana* (2 vols.). Francesco Chiesa was awarded the Angiolo Silvio Novaro Prize by the Royal Italian Academy.

In German fiction may be mentioned the historical novels by Karl Anton Vogt (*Hans Waldmann*), Robert Faesi (*Fusilier Wipf*), R. B. Maeglin (*Gilberte de Courgenay*), R. Kuchler-Ming (the trilogy *Die Lauwiser und ihr See, Die Lauwiser im Krieg, Die Lauwiser und ihr Pfarrer*), and by Maria Duth-Rutishauser (*Der Huter des Vaterlandes*). Social problems are dealt with by Maria Ulrich (*Der unbekannt Arbeiter*), Francesco Chiesa (*Sankt Amarielis*), Alfred Fankhauser (*Der Messias*). A collection of short stories from various authors was published by Walter Muschg (*Schweizer Novellenbuch*). Repercussions of the present war are to be found in *Gewehr von der Wand!* (prose) by Josef Konrad Scheuber, *Gewehr bei Fuss* (poems) by Paul Lang, *Kamerad!* (poems) by Hans Rhyn, *Der Schuttelbecher* (poems) by Werner Sutermeister. The poet Albin Zollinger died in November, 1941.

Swiss Dutch, spoken by 3,000,000 people, though not recognized as an administrative language, is more and more used for literary purposes—poetry, plays, short stories, novels. Rudolf von Tavel's historical novels, Josef Reinhart's novels and short stories, Meinrad Lienert's poems appeared in new editions. Karl Grunder's *Gottwyl*, Simon Gfeller's *Eichbuelersch*, T. J. Felix's *Es mantschelet*, Jakob Kaser's *Fyrobe*, describe various aspects of Swiss country life. Traugott Meyer, Switzerland's outstanding lyric poet, comes forth this time with two books in prose: *'s Tunäldorf* (novel) and *'s Bottebrächts Miggel verzellt* (stories). *Schwyz Meie*, by Adolf Guggenbühl and Georg Thurer, is a verse collection of most charming qualities (with biographical notes). *Schwyzert III, 1-4* contains a bibliography by G. Schmid.

ALFRED SENN.

SWITZERLAND. A federated republic of central Europe. Capital, Bern (Berne).

Area and Population. Switzerland has an area of 15,944 square miles and a population estimated at 4,216,000 on Jan. 1, 1940 (4,066,400 at the 1930 census). In 1939, 1,374,800 Swiss lived in cities of more than 10,000 inhabitants. Living births in 1939 numbered 63,837 (15.2 per 1,000); deaths, 49,484 (11.8); marriages, 31,513 (7.5). Estimated populations of chief cities on Jan. 1, 1940: Zurich, 333,600; Basel, 162,600; Geneva, 123,300; Bern, 122,400; Lausanne, 90,750; St. Gallen, 63,550; Winterthur, 59,000; Lucerne, 54,650. The 1930 census showed 2,924,313 German-speaking Swiss; 831,097 French-speaking; 242,034 Italian-speaking; and 44,158 Romansch-speaking.

Defense. All males from 18 to 60 years of age serve in the compulsory national militia. Some 650,000 men were mobilized following the outbreak of the European War in 1939. At the beginning of

1941 an estimated 525,000 men were under arms (see *History*). The active air force numbered 6,840 men on Jan. 1, 1941; it had less than 500 planes. The defense budget for 1941 totaled 1,050,000,000 Swiss francs.

Education and Religion. The system of public education varies by cantons. In the academic year 1938-39, pupils in primary schools numbered 460,-222; in secondary and special schools, about 90,-000; the universities of Basel, Zurich, Bern, Geneva, Lausanne, Fribourg, and Neuchatel had among them 9,126 students in the summer of 1939. Literacy is virtually universal. The census of 1930 reported 2,230,303 Protestants, 1,666,350 Roman Catholics, and 17,973 Jews.

Production. At the 1930 census, 404,239 persons were engaged in agriculture, 819,018 in manufacturing and trades, and 169,989 in commerce. Exclusive of products used by farmers, agricultural production in 1940 was provisionally estimated at 1,491,300,000 Swiss francs, of which 1,105,200,000 francs represented animal and poultry raising and 386,100,000 francs soil cultivation. The total value was an increase of 15.7 per cent over the 1939 level. The yield of potatoes in 1940 was about 900,-000 metric tons. Livestock in 1939: 1,700,585 cattle, 926,400 milk cows, 800,000 swine, and 146,-000 goats. The hotel industry, with an investment of 2,100,000,000 francs, was hard hit by the European War. Expenditures of foreign tourists in 1940 were about one-fourth those of 1939, itself a poor year. The principal manufactures are watches and clocks, machinery, textiles, electric equipment, chemicals, shoes, cheese, condensed milk, etc.

Foreign Trade. Imports in 1940 totaled 1,853,-600,000 Swiss francs (1,889,358,000 in 1939); exports, 1,315,700,000 (1,297,577,000 in 1939). The volume of 1940 imports was one-third less than in 1939. The leading 1939 imports, in order of value, were mineral substances, iron work, cereals, fruits and vegetables, and chemicals. Chief exports: Machinery, clocks and watches, dyes, and cotton goods. See *YEAR BOOK* for 1940 for distribution of 1939 trade by countries. Also see *TRADE, FOREIGN*, in this volume.

Finance. Actual budget receipts for 1940 were 786,000,000 Swiss francs (ordinary, 482,000,000, extraordinary, 304,000,000) and expenditures 1,677,000,000 francs (ordinary 512,000,000; extraordinary, 1,165,000,000). In the preceding 26 years the budget showed a surplus only four times. Extraordinary expenditures for national defense and mobilization were estimated at 2,533,100,000 francs from Sept. 1, 1939, to Dec. 31, 1941. The ordinary budget estimates for 1941 anticipated revenues of 518,000,000 and expenditures of 592,-000,000 francs. The public debt on Jan. 1, 1940, was 5,841,396,529 francs, including the railway debt of 3,116,304,350 francs. The Swiss franc exchanged at an average of \$0.2253 in 1939 and \$0.2268 in 1940.

Transportation. The railways, with about 3,218 miles of line, carried 119,700,000 passengers and about 20,000,000 tons of freight in 1940. Gross operating receipts were 395,500,000 francs; operating expenditures, 230,000,000. The highway mileage was 10,291 in 1940 (see *ROADS AND STREETS*). Swiss and foreign air lines operating within the country carried 62,239 passengers in 1939. Merchandise transported through the Rhine port of Basel in 1939 totaled 2,115,932 metric tons. See *History* below.

Government. The Constitution of 1874 provides a republican confederation of 22 cantons or States. The Federal Assembly consists of two chambers;

one, the Council of States, is composed of 44 members—two from each canton; the other chamber, the National Council, has 187 members, all elected quadrennially by the obligatory vote of males and females who have attained 20 years of age. The Federal Council consists of seven members, all elected quadrennially by vote of the united chambers of the Federal Assembly; by similar vote, but annually, are chosen, from among the seven, a President of the Confederation and a Vice-President of the Federal Council. Each of the Federal Council's seven members is assigned to the direction of one of the seven Federal administrative departments. Dr. Ernst Wetter was President during 1941. Dr. Philippe Etter (Vice-President in 1941) was elected, Dec. 10, by the Federal Council to be President in 1942.

HISTORY

Efforts to Trade for Food. Since the country had more inhabitants than its largely uncultivable surface could feed, it faced the necessity of selling Swiss products where their price would buy return cargoes of foodstuffs. This could not be done within the group of European countries that Germany and Italy held in subjection. There remained Russia, at peace with these two conquerors early in the year, but shaping policies for itself. Agents of Switzerland succeeded in negotiating at Moscow in February an agreement (announced on the 22nd) for exchange of goods over the space of two years, by a system of barter, to an intended total "turnover" of 224,800,000 Swiss francs for the first year and 300,000,000 for the second. The Swiss stipulated for grain, timber, cotton, and products of petroleum, they offered machine tools, instruments of precision and other metal products in which fabrication, in point of value, much outweighed material. The German invasion of Russia, following before opportunity for any great exchange of goods under this agreement, put Russia out of the Swiss trading range for the rest of the year.

The Swiss could still hope to maintain trade with countries outside of Europe. Undiscouraged by the fate of its effort to send out Swiss goods on a fleet of Greek ships, via Genoa—a plan spoiled by the Italo-Greek war in 1940—the Swiss Government acquired seven vessels in its own name and through corporations that it controlled. It registered these under its own flag, stating their home port as Basel on the Rhine. The law authorizing this move was approved on April 8. Three vessels were acquired by the Government; four were acquired by various corporations and chartered to the Federal War Transport Office. These vessels, totaling, by November 1, 39,210 tons, operated mainly between Genoa, Lisbon, and New York. Their operations via Genoa depended on the issue of certifications by the British authorities, permitting them to pass the blockade of that port. Trade via Lisbon, though free from this hindrance, had to struggle with the handicap of greatly impaired transportation on the railroads to Portugal through Spain and on those through France as well.

The Spanish Government favored Swiss use of Iberian routes but stood in no position to put its own railways in order; it helped matters to some extent by authorizing the Swiss, in March, to run goods through Spanish territory, on motor trucks from the French border, and by chartering to the Swiss Government, April 27, some 200 wrecked or derelict freight cars for the latter to repair and operate. A Swiss organization called Autotransit undertook to move goods by motor truck and began

operations between Switzerland and Portugal with the first 20 of an intended 100 vehicles, June 30.

The trade overseas, thus brought about, continued with intermittent success. A variety of risks made it precarious. The chief of these lay not in the physical dangers of navigation amid submarines and passage of goods over lands disordered by war, but in the jealousies aroused in belligerents on either side by the other side's relations with the Swiss. Germany suspected them of harboring British subjects advantageously situated to gain German secrets. Great Britain and Italy alike curtailed the lists of goods that they would allow to pass in the Swiss vessels. Great Britain reduced in August the number of certifications allowed for Swiss vessels and declared, September 24, intention of terminating them altogether. When the United States became a belligerent in December the future of Swiss external trade became highly dubious, and with it the procurement of the needed foodstuffs, which were to come from America.

Swiss Foreign Relations. Relations with Germany outranked all other in concerns of the Swiss Government. Fuel, iron, and fertilizer had to be obtained from the Reich. Without fuel and iron the main industries could not operate and transportation must cease, without fertilizer the even normally insufficient crops would shrink as much as if a great part of the cultivable acreage had lain fallow. These considerations dictated friendly relations with Germany. The Republic had in return little to offer the Reich—not enough to render its independence an object of particular dislike. A commercial treaty between the two expired on June 30 and another such treaty had to be made. Its negotiation, a matter of high importance to the Swiss, stretched out beyond the term of the existing treaty, which had to be temporarily extended. The new agreement, signed on July 19, brought Switzerland the advantage of higher monthly deliveries of German coal (200,000 tons), particularly needful as the stored coal in Switzerland had been in great part burned. Germany guaranteed to deliver 13,500 tons a month of iron, 14,500 tons a month of petroleum and its derivatives, and also fertilizer, sugar, and iron. Switzerland was required to furnish Germany with animals for slaughter, some dairy products, and fruit if its harvest allowed. Germany also got the option to buy a variety of goods at will. The arrangement threatened to cost Switzerland more in money than her exports could meet. In particular, the cost of German coal had risen; figures published in December showed that the Swiss had paid about 28,000,000 francs for some 816,000 metric tons of German coal bought in all of 1939 and 50,000,000 francs for 458,000 tons bought in the first half of 1941.

A treaty with Italy, announced at the beginning of June, established the facilities for Switzerland's oversea trade via Genoa.

Swiss sentiment toward Germany and Italy was repeatedly alarmed by declarations in the press of these countries, warning Switzerland of the need to conform to the "new order" then being established on the European continent. One of these warnings appeared in the *Boersen-Zeitung* of Berlin early in May. It pointed out that to the contrary of the latitude allowed the Swiss press, the German Government held publishers to account for journals' utterances; it thus seemed to give the air of Government approval to its own warning that Switzerland curb published expression of anti-German opinions. The *Gazetta del Popolo* of Turin charged in April that a British center of espionage was maintained near the Italian border and sug-

gested that Switzerland's status might have to go "on the agenda of continental rearrangement." The German Legation, whether from inadvertence or from design, invited to its celebration of the anniversary of the Third Reich one-time members of National Movement, a society that had been dissolved for unruly attempts to raise a Swiss counterpart of the Nazi regime.

It was a chronic German and Italian grievance that Switzerland did not take more effectual action against British airmen flying over Swiss territory on the way to or from air attacks on the Axis countries. The Swiss Government protested on more than one occasion to the British Government.

Internal Economy. The year saw much extension of public control over prices and over consumption of necessities. A Department of Economy held centralized authority over the controlling agencies. It received increased powers in February, relating to the so-called war-economy syndicates that had been authorized in 1939. It thus became possible for the department to deny goods and the necessary permit for operating a business to persons who otherwise might evade regulation by not joining a syndicate. Restaurants and hotels were limited as to larder. Consumers were paid for used tin cans, and these were renovated for re-use.

SYRIA AND LEBANON. A territory on the east coast of the Mediterranean between Turkey and Palestine, mandated to France by the League of Nations on July 24, 1922, and occupied by British and Free French military forces in June–July, 1941. Beyrouth (Beirut) was the seat of the French High Commissioner.

Area and Population. At the time of the British-Free French occupation, the territory was divided into the Republic of Syria (capital, Damascus; area, about 72,560 square miles; estimated population, 2,487,000 in December, 1938) and the Republic of Lebanon (capital, Beyrouth; area, 3,470 square miles; population, 862,600 at 1935 census). Included in the Syrian Republic were the two semi-autonomous districts of Latakia (capital, Latakia, area, 2,310 square miles; estimated population, 372,000 in 1938) and Djebel Druze or Jebel Druze (capital, El Suweidh; area, about 2,700 square miles; estimated population in 1938, 71,000 excluding some 15,000 nomads who spent part of their time in the district)

The people are mainly Arabs and Arabic is the chief language, but there are considerable numbers of Turks, Kurds, Turkomans, Circassians, Armenians, Iranians, and Jews as well as about 28,000 Europeans. The chief cities, with 1935 populations, are: Damascus, 193,912; Aleppo, 177,313; Beyrouth, 134,655; Homs, 52,792.

Education and Religion. Education statistics for the entire mandated territory in 1938 showed 809 public elementary schools (87,220 pupils), 1,313 private elementary schools (119,894 pupils), 514 foreign primary schools (67,525 pupils), 155 vocational schools (17,984 pupils), 33 secondary schools (1,584 pupils). There was also a French university at Beyrouth (641 students), an American university and a college at Beyrouth (444

students), an Arab university at Damascus (356 students), an Arab academy, and agricultural colleges at Sélémié and Bekaa. The American institutions were closed in May, 1941. The composition of the population by religions was: Moslems, 1,514,755 (including 1,075,816 Sunni Moslems); Christians, 505,419 (including 186,676 Maronites, 151,328 Orthodox, 66,762 Greek Catholics or Uniate, 32,859 Armenians, 28,885 Melkites, 8,887 Protestants, 7,305 Armenian Catholics); Jews, 16,526.

Production. Agriculture and stock raising are the main occupations. Approximate normal production (in metric tons): Wheat, 600,000 (665,000 in 1940); barley, 375,000 (385,000 in 1940); corn, millet, and sorghum, 60,000 (58,000 in 1940); olive oil, 15,000 (18,000 in 1940); oats, 10,000; rice, 5,000; potatoes, 50,000; lentils, 35,000; chick-peas, 18,000; beans, 11,000; onions, 40,000; sesame, 4,500; grapes, 200,000; citrus fruits, 50,000; apricots, 30,000; bananas, 10,000; watermelons, 200,000; apples, 3,500; cotton, 30,000; hemp, 4,500; tobacco, 4,500; wool, 7,500. Livestock on Jan. 1, 1939: 2,631,000 sheep, 491,918 cattle, 90,030 goats, 80,168 camels, 182,234 asses. Gypsum, marble and other building stone are the only minerals produced, although recent reports indicate the presence of oil. Chief manufactures: Textiles, cement, macaroni, biscuits, soap, matches, beverages, and brushes.

Foreign Trade. Foreign commerce came practically to a standstill from June, 1940, to July, 1941, during which time trade agreements with Palestine (Syria's leading market), Trans-Jordan and Iraq became largely inoperative. Trade with the sterling area in the Middle East was renewed following the British-Free French occupation (see *History*). Including bullion and specie, imports in 1938 were 70,811,061 Syrian-Lebanese pounds (\$40,787,000) and exports 29,278,213 pounds (\$16,864,000). The transit traffic is important in peacetime.

Finance. Under the French mandatory administration, Syria and Lebanon had separate budgets and also a "common interests" budget covering customs, posts, telegraphs, etc. Actual receipts of the "common interests" budget were 12,237,189 Syrian-Lebanese pounds in 1938 and 7,742,500 in 1939. Estimated receipts of the Syrian Republic for 1940 were 11,746,000 pounds; of the Lebanese Republic, about 6,500,000 pounds. The Syrian-Lebanese pound (equal to 20 French francs), exchanged at \$0.576 in 1938, \$0.502 in 1939, and \$0.416 in the first half of 1940.

Transportation. Syria in 1940 had about 890 miles of railway line, providing connections with Palestine, Turkey, and Iraq, and about 7,100 miles of roads. Two companies operated motor bus services across the desert between Damascus and Baghdad. The air services (Tripoli-Marseille, Beirut-Damascus, etc.) were interrupted by the European War. Beyrouth is the chief port of call but Tripoli is used for the important transit trade and is the terminal of one branch of the oil pipeline from the Iraq oil fields.

Government. The French Government in 1936 concluded treaties of friendship and alliance with the governments of the Syrian and Lebanese republics, providing for termination of the French mandate and granting extensive powers of autonomy. The treaties were ratified by the parliaments of the two republics but failed to receive the approval of the French parliament. Subsequent political disorders caused the French High Commissioner in July, 1939, to suspend the constitutions of both the Syrian and Lebanese republics and to appoint councils to administer them under his

direction. Latakia and Djebel Druse continued to be administered by French governors, assisted by partly nominated and partly elected councils. Following the Franco-German armistice of June 22, 1940, the French authorities in Syria and Lebanon adhered to the Vichy Government (see *YEAR BOOK* for 1940, p. 727 f.). On Dec. 9, 1940, Marshal Pétain appointed Gen. Henri Dentz as High Commissioner and commander-in-chief of the French military forces in Syria and Lebanon. For developments in 1941, see below.

HISTORY

Native Disorders. General Dentz, newly appointed High Commissioner, arrived at Beirut toward the end of December, 1940, to find the territory seething with native discontent. The shortage of food-stuffs and other essential commodities was becoming more acute. Rapid inflation of the currency was under way. Recent British and Greek victories over the Italians in North Africa and Greece had increased hostility to the Italian and German armistice commissions in Syria and Lebanon and strengthened pro-British sentiment among the natives Combined with assiduous Axis propaganda, these same factors had greatly encouraged the long-standing agitation for independence.

Immediately upon his arrival, General Dentz attempted to end the strained relations between the French authorities and the native nationalists. In a visit to Damascus on Jan. 4, 1941, he announced that France was "determined to carry alone her mission in Syria," that he would maintain internal and external order and security, and that food rationing would be closely supervised. Within a week he was obliged to forbid public demonstrations in Beirut, where crowds sought to parade with banners demanding bread, sugar, and gasoline. Following numerous arrests of strike organizers and demonstrators, merchants closed their shops in a sympathy strike.

General Dentz then abandoned his efforts to conciliate the native political parties and undertook to reduce their influence. Military control was extended and administration assumed a more totalitarian form. Regulations increasing bread prices and calling for compulsory registration of wheat stocks provoked student demonstrations in Damascus beginning February 28. Quickly developing into a general strike, the demonstrations spread throughout Syria and Lebanon. At least four persons were killed in Damascus on March 8-9, when French troops broke up protracted rioting.

The disorders soon assumed a political complexion. Syrian nationalist leaders demanded the abolition of the separate administrative units into which the mandated territory was divided and the formation of an independent national government with all the powers granted in the unratified French-Syrian treaty of 1936. General Dentz made successive visits to Damascus to negotiate an understanding with them, but they flatly rejected his compromise proposals. The High Commissioner then instituted martial law in a number of towns to end the continued demonstrations and strikes. His effort to form a new Syrian Cabinet excluding the nationalists provoked a new wave of rioting on March 25-26. At least 12 persons were killed in Damascus and Aleppo when French troops fired on menacing crowds. Martial law was extended to all of the principal cities. Before order was restored the death toll mounted to 25, the wounded to more than 150, and the number under arrest to some 400.

On April 1 General Dentz in a Beyrouth radio broadcast announced his decision to form a new Syrian Government and appealed for an end to street demonstrations. He offered reforms, but indicated that the nationalists' demand for independence could not be granted. By a decree of April 4 Khaled Bey Assem, a Moslem leader acceptable to the nationalists, was appointed Premier of the Syrian Republic with authority to appoint his own Council of Ministers. He was granted full powers of administration subject to the advice of the Council of State appointed by the High Commissioner. These concessions seemingly made a favorable impression upon the Arab nationalists in the Syrian Republic and caused a marked improvement in the political situation. Somewhat similar changes were made in Beyrouth, where on April 6 the Christian Maronite leader, Alfred Naccache, formed a new Ministry for the Lebanese Republic, replacing that headed by President Emile Edde.

The economic situation remained critical, however, and Axis agents busily stirred up further discontent among Arabs and the various national minorities. More rioting by an armed mob in central Lebanon produced further bloodshed toward the end of April. About the same time there were new "flour riots" in northern Syria, in which five persons were killed, 20 seriously injured, and scores arrested. Early in May a fire attributed to sabotage did extensive damage to the small Tripoli refinery upon which Syria and Lebanon were exclusively dependent for gasoline and other petroleum products. The French Government's resignation from the League of Nations on April 25 helped to undermine the moral authority of the Vichy representatives in Syria and Lebanon.

Axis Penetration. The activities of Axis representatives and their native agents in Syria and Lebanon assumed a more menacing aspect following the German conquest of Greece and the outbreak of the Anglo-Iraqi hostilities on May 2 (see *IRAQ under History*). The German and Italian armistice commissions redoubled their pressure upon High Commissioner Dentz for collaboration with the Axis. Numerous German "tourists" and "business men" made their appearance. On May 15 it was learned that, with the consent of General Dentz, German military planes were using Syrian-Lebanese airports for refueling en route to aid the Iraqi Premier against the British. On May 17 it was reported from Turkey that several trainloads of munitions and supplies had been sent from Syria to Premier Rashid Ali Al-Gailani's forces in Iraq, and that the Germans were reconditioning the French planes and other war materials stored in Syria and Lebanon since the Franco-German armistice.

Beginning May 16 British and Free French planes based in Palestine and Trans-Jordan bombed and machine-gunned the Syrian airdromes in use by German and Italian planes. In a radio broadcast from Beyrouth on May 18, General Dentz warned that he would resist British "aggression" and would "reply to force with force." He admitted that some German airplanes flying over Syria "were forced to make landings" but said that "this privileged move by our former enemy was strictly within the terms of the armistice." Coming immediately after the announcement in Vichy that France had agreed to collaborate with Germany in the "new European order," General Dentz's statement was believed to presage immediate German occupation of Syria and Lebanon with the consent and assistance of the Vichy Government. There was an exodus of British,

American and Palestinian residents from the Lebanon. On May 20-21 British consular officials in the mandated territory were expelled by the High Commissioner Dentz in retaliation for the attacks on French airdromes. French anti-aircraft guns and pursuit planes were subsequently reported to have shot down several British bombers engaged on similar missions.

The decision of the Vichy Government and General Dentz to collaborate with the Axis powers reinforced de Gaulle and pro-British sentiment among French officials, officers, and civilians in Syria and Lebanon. The British and Free French at the same time redoubled their efforts to secure the repudiation of the Vichy Government by the French and native inhabitants of the mandated territory. In leaflets widely scattered over Syria and Lebanon by British planes, Gen. Georges Catroux, Free French commander in the Near East, urged Frenchmen to "shake off the enemy yoke" and unite the territory with the other French colonies adhering to Gen. Charles de Gaulle's movement. A number of resignations of French officials was reported and there were numerous desertions from General Dentz's military forces to join the Free French units in Palestine. Among the deserters was Col. Philibert Collet, popular organizer of noted Circassian cavalry units in France's Syrian army.

Allied Invasion. Evidence of dissension among French civil and military officials in Syria and Lebanon and the influx of German propagandists and technicians precipitated Allied intervention to forestall the German drive that was expected to follow the occupation of Crete. The British and Free French commanders apparently hoped that their attack would cause the prompt capitulation or collapse of the Vichy Government's authority in the mandated territory, but this conjecture proved unfounded.

On June 2 the French authorities in Syria and Lebanon severed all communications with British-held territories in the Near East. The next day General Dentz declared a state of siege throughout eastern Syria following the blowing up of several important railway bridges. There was a roundup of British agents and Free French sympathizers. In a radio proclamation on June 5 the High Commissioner urged his armed forces to defend the mandated territory to the last. Stating that France had determined "to modify her political line regarding Germany," he said the Germans had demanded that Syria be defended to the death as the price of Nazi guarantees to release French war prisoners and provide the French people with food.

There was steadily mounting tension until the British-Free French invasion began on the early morning of June 8. On June 4 British planes bombed oil storage tanks in Beyrouth. The British fleet established a blockade of the Syrian-Lebanese coast. Retaliatory bombing of Amman, capital of Trans-Jordan, by French planes occurred June 5.

The invasion of June 8 was accompanied by a propaganda barrage designed to win over both natives and French in Syria and Lebanon to the Allied cause. A proclamation by General Catroux to the inhabitants of Syria and Lebanon declared that in the name of Free France and its chief, Gen. Charles de Gaulle, he was assuming "the powers, responsibilities, and duties of the representative of France in the Levant." It continued:

In this capacity I come to put an end to the mandatory regime and proclaim you free and independent.

You will therefore be from henceforward sovereign and

independent peoples and you will be able either to form yourselves into separate states or unite into a single state. In either event, your independent and sovereign status will be guaranteed by a treaty in which our mutual relations will be defined. This treaty will be negotiated as soon as possible between your representatives and myself. Pending its conclusion our mutual position will be one of close unity in the pursuit of a common ideal and common aims.

General Catroux promised the people of Syria and Lebanon that if they rallied to the Allied cause the British would lift the blockade, permit the resumption of trade with the sterling bloc, and extend all the other "advantages enjoyed by free countries who are associated with them." The British Government, in simultaneous statements issued by Foreign Secretary Eden in London and the British Ambassador in Cairo, formally endorsed General Catroux's pledges to the people of the invaded territory. At the same time Gen. Sir Archibald Wavell, commander of the British Imperial forces in the Middle East, addressed an appeal to the French military forces in Syria and Lebanon to join the British and Free French armies in preventing the "grabbing" of the mandated territory by Germany. He warned that "all resistance on your part is in vain." These proclamations were scattered by Allied planes in leaflet form throughout Syria and Lebanon.

On the same day Marshal Pétain sent a message to "Frenchmen of the Levant" denying that France was preparing to deliver Syria and Lebanon to the Germans or that French sovereignty there was threatened by anyone except the British and Free French. He declared that there was not a single German soldier in Syria or in Lebanon and that the few Axis airplanes that landed there had virtually all left. The Allied proclamations apparently had considerable effect. The bulk of the native population welcomed the invaders, according to American correspondents, although Syrian newspapers questioned the value and sincerity of the Free French and British pledges. There were further desertions from the French forces, including the commander of the Lebanese armed units. However the professional French army obeyed the orders of its officers and opposed stiff resistance to the invaders. See *WORLD WAR* for a full account of the campaign.

In both Damascus and Beyrouth the natives pressed the French forces to evacuate those cities in order that they would not be destroyed or damaged in the fighting. Just before the Allies entered Damascus on June 21, after overcoming stiff resistance, the Premier of the Syrian Republic assumed by decree supervision over internal matters previously under the control of French officials. In Beirut anti-French demonstrations, rioting, and looting were reported among native troops and civilians. These grew in intensity as the Allied land forces approached and as General Dentz refused to withdraw his troops from the city and declare it an open town.

The Armistice. With Australian forces battering at the outskirts of Beyrouth and native disorders within the city, General Dentz on July 8 applied to the British for an armistice. The Vichy Government authorized the peace negotiations July 9. The British conditions called for the surrender by the Vichy forces of all arms and war material; a free choice for the Vichy troops between repatriation to France or joining the Free French forces; surrender to the Allies undamaged of all railways, ports, and communication facilities; the handing over of Germans and Italians for internment; the turning over of all warships for internment at Beyrouth; and the release of all Allied prisoners in Syria and Lebanon. The British also offered "com-

plete amnesty" to French troops in the mandated territory and reiterated the Anglo-Free French pronouncements of June 8 concerning Syrian-Lebanese independence and Free French representation of French interests in the Levant.

The Vichy Government on July 11 refused to negotiate with "traitors to their country like de Gaulle and Catroux," declared the British pledges regarding the emancipation of Syria and Lebanon to be null and void, and rejected the term "complete amnesty" as one of several that it considered "contrary to its interests and its dignity." However it authorized General Dentz to take whatever measures he considered necessary. Accordingly hostilities were ended at midnight of July 11. Headed by Gen. Jean de Verdillac, a delegation of French officers representing General Dentz met the British and Free French commanders, Lt. Gen. Sir Henry Matland Wilson and General Catroux, at Acre, Palestine, the next day. An armistice accord was initiated that night and signed July 14, following its ratification by the Vichy and London Governments.

The Armistice treaty made no mention of the political provisions governing the future of Syria and Lebanon that had been mentioned in the original British conditions. It provided for Allied occupation of all Syrian and Lebanese territories beginning July 15, British use of all airdromes and landing fields, the rendering of all honors of war to the French forces, and the cooperation of the Vichy military authorities "toward retrieving arms which may be found in the hands of the population" French schools, hospitals, religious missions and other institutions in the occupied territories were assured their rights would be respected. The British promised not to punish Syrian and Lebanese natives who participated in the hostilities either as soldiers or administrators. The other clauses of the armistice embodied the military conditions submitted by the British on July 9. A commission of 2 British, 1 Free French, and 2 Vichy representatives was established to supervise execution of the armistice terms.

Marshal Pétain, in a radio broadcast of July 14, cleared the ground for possible future restoration of the Vichy Government's sovereignty over Syria and Lebanon. He took the position that the British attack was unjustified and that France was bound to resist under the terms of the League mandate and the Franco-German armistice. The Vichy Government, he said, refused to accept the political conditions advanced by the British and Free French, and the Vichy forces in Syria and Lebanon had laid down their arms under duress.

The Allied Occupation. The elimination of Vichy's authority left the governmental situation in Syria and Lebanon unstable, with authority divided three ways. The maintenance of order rested primarily in the hands of British military tribunals operating under martial law. General Catroux, as Free French High Commissioner, took over the civil functions formerly performed by General Dentz. Lastly the native governments in Syria and Lebanon formed earlier in the year carried on with the same personnel, although their powers were curtailed upon the outbreak of fighting.

Friction soon developed between the British and Free French over their respective prerogatives and policies, while native nationalists pressed for prompt fulfillment of the Anglo-Free French promises of independence. The adjustment of these differences on a basis satisfactory to the three parties concerned was achieved without undue difficulty. On August 7 Oliver Lyttleton, the British Govern-

ment's political representative in the Middle East, in a letter to Gen. Charles de Gaulle, guaranteed the Free French "a predominant position in Syria and Lebanon over any other European power," including Britain. He stated that both Britain and Free France were pledged to the independence of these territories and that Britain had no interest there except to win the war.

At the same time the British were anxious to conciliate the natives as part of the larger problem of keeping the Arab countries friendly. To make the joint occupation as agreeable as possible to the native population and to maintain friendly co-operation with the Free French officials, the British established a special mission in Syria headed by Maj. Gen. Louis Spears. They pressed the Free French to carry out the promise of independence, and at the same time sought to lay the foundations for a federation of Arab states that would start with an economic union between Syria and Lebanon.

Independence of Syria and Lebanon. On September 16 General Catroux carried out the Free French pledge by proclaiming the independence of Syria. He announced that "Free France, acting in agreement with her ally, Great Britain, has undertaken to terminate the mandate and grant Syria the status of an independent sovereign State and to guarantee the new State by treaty." Thus the Free French undertook to carry out the general policy of the Franco-Syrian treaty of 1936 (see section on *Government*), which failed of ratification.

Sheik Taj Eddin el Hassani was named the first President of the independent Syrian republic. A government comprising some of Syria's leading nationalist politicians was formed September 20 under Premier Hassan Bey Hakim, with Faiz Bey Khoury, leader of the nationalist bloc in Syria, as Minister of Foreign Affairs. Most of the important native political groups were represented on the Cabinet, which was instructed by the President to work out "a complete statute of independence in full consultation with all public interests and sections of opinion." This statute was proclaimed September 27.

The predominantly Christian Lebanese, who favored independence under a French alliance as a safeguard against Arab and Moslem control, received similar assurances from the Free French. A proclamation of the independence of the republic of Lebanon was then issued at Beyrouth November 26.

In addition to the grant of political independence, the two republics obtained substantial relief from acute economic difficulties. Resumption of trade with Allied-controlled countries, heavy expenditures by the Anglo-Free French forces, and shipments of food and other supplies to the natives of Syria and Lebanon by the British Government and the American Red Cross eliminated much suffering and even produced a trade boom. These developments won increased support for the Allied cause among Syrians and Lebanese, and lessened the danger of native support for an Axis invasion of the Middle East. To meet the threat of a German drive through Turkey, the British and Free French built up a strong military force in Syria, Lebanon and adjoining territories during the latter half of the year. The Free French forces were strengthened by numerous enlistments of professional soldiers formerly under the command of General Dentz.

Completion of Armistice Terms. Completion of the terms of the armistice convention of July 14 was announced by the Commission of Control on Octo-

ber 8. Charging that Vichy military authorities violated the armistice terms in several respects, notably through failure to release all officers of Allied forces captured during the campaign, the British on August 8 arrested General Dentz and 35 of his officers in Tripoli and held them until the return of Allied officers taken to France. General Dentz was permitted to return to France early in September.

TAJIK SOVIET SOCIALIST REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS under *Area and Population*.

TANGANYIKA TERRITORY. A region in East Africa administered, since 1919, by Great Britain under a League of Nations mandate; formerly known as German East Africa. Area, 374,131 square miles, including 20,000 square miles of inland waters. Population (1939), 5,283,893 (5,243,167 natives, 32,801 Asiatics, and 7,925 Europeans). Dar es Salaam (capital), had 33,147 inhabitants.

Production and Trade. Sisal, coffee, cotton, groundnuts, sesame, and copra were the main agricultural crops. Other important products were gold (219,513 troy oz. in 1940), diamonds, ghee, hides and skins, and timber (pencil cedar, mahogany, ebony, etc.). Livestock (1939): 5,190,168 cattle, 1,716,005 sheep, and 2,906,655 goats. Trade (1939): £3,039,673 for imports (cotton piece goods, foodstuffs, iron and steel manufactures, gasoline, and kerosene were the main items) and £4,585,658 for exports (sisal £1,223,477, gold £980,346, cotton £557,358, and coffee £466,026). Shipping (1939): 460 steamers of 2,161,270 tons entered the ports. Roads (1940): 22,356 miles.

Government. Budget estimates (1941): £2,249,000 for revenue and £2,319,000 for expenditure. The administration is under the control of a governor, assisted by an executive council. There is a legislative council of 13 official members and not more than 10 nonofficial members. Governor-designate, Sir Wilfred Jackson who was expected to assume office during January, 1942.

History. It was announced during October, 1941, that British military authorities had decided to reconstruct the Great North Road in eastern Equatorial Africa from the Northern Rhodesia border through Tanganyika for 810 miles and then through Kenya for 118 miles to Nairobi. The road will be constructed so as to render it fit for traffic at all seasons of the year. The government of Tanganyika agreed to receive 5,000 Italian nationals from former enemy territories in East Africa (3,000 will be accommodated in a central camp at Tabora and 2,000 in smaller camps attached to Roman Catholic missions). See KENYA under *History*.

TANGIER. A former internationalized district in northwestern Africa, including the port and city of Tangier, situated 15 miles across the Strait of Gibraltar from the British fortress. The Tangier Zone was occupied by Spanish troops on June 14, 1940, and was formally incorporated in Spanish Morocco the following November 23 (see YEAR BOOK for 1940, p. 729). Area, about 225 square miles; estimated population, 80,000—mostly Moslems but including some 17,000 Europeans and

7,000 Jews. The city of Tangier had about 45,000 inhabitants.

Commerce, agriculture, fishing, and cigarette-making are the chief occupations. Leading crops are wheat, barley, and chickpeas. Imports in 1938 were valued at 94,693,830 French francs; exports, 11,380,286 francs. A French-controlled railway connects the city of Tangier with Fez, French Morocco, and with the French North African railway network. Highways and roads extend about 65 miles. Budget estimates for 1939: Receipts, 29,795,500 francs; expenditures, 29,653,312 francs.

Tangier was demilitarized, neutralized, and placed under the control of an international commission under the General Act of Algeciras of 1906, a series of agreements concluded in 1911 and 1912, a convention signed by Great Britain, France, and Spain on Dec. 18, 1923, and a protocol added to the convention on July 25, 1928. The protocol accorded Italy almost equal rights with the other three signatory powers in the administration of Tangier. For the international government established under the Tangier Convention, see *YEAR BOOK* for 1940, p. 729. This system was abolished following the Spanish occupation. The French administrator was replaced by a Spaniard, Dr. Emanuel Amieva.

History. Following the course described in the preceding *YEAR BOOK*, the Spanish authorities on Dec. 14, 1940, dismissed British, French, and Italian employees of the former international administration and assumed charge of Tangier's finances, health, and public works. The British Government immediately reserved all its rights under the Tangier Convention. After lengthy negotiations, an Anglo-Spanish agreement on Tangier for the duration of the European War was announced Feb. 26, 1941. Britain recognized Spain's dominant position in Tangier, while Spain gave formal assurance that Tangier would not be formal. The Franco Government also undertook to accept international control of commercial matters, respect the personal rights of British subjects in Tangier, and guarantee the continued functioning there of existing British organizations and the British press.

Meanwhile Spain by a decree of Feb. 10, 1941, had assumed complete supervision of Tangier's economic, commercial, and monetary relations with foreign countries. Exchange control was instituted, but foreign currency was permitted to circulate. The Spanish authorities followed this on March 16 by ousting the Mendoub, appointed by the Sultan of Morocco to supervise native affairs in the Tangier Zone. He was replaced by a Spanish-appointed native Pasha. The Mendoub's palace was reconverted into a German consulate, and on March 17 the German flag was raised in Tangier for the first time since World War I.

This incident symbolized the displacement of Italian by German influence at Tangier. Mussolini's representatives early in the year had indicated their intention of taking over Tangier as partial payment for Italian aid to General Franco during the Spanish civil war. In February, however, a German mission was reported to have arrived in Tangier and to have taken over indirect control of its affairs with the reluctant acquiescence of both Spaniards and Italians. Economic conditions in general and the food shortage in particular became progressively worse during 1941.

TANNU TUVA. A protectorate of the Soviet Union, nominally an independent republic, situated in Central Asia between Siberia and Outer Mongolia. Area, about 64,000 square miles; population, estimated at 65,000 (50,000 Tuvinians, 12,000 Russians, and 3,000 Chinese and Mongols). Capital, Kizilkhoto (Krasny in Russian), with about 10,000 inhabitants. The natives are engaged mainly in pastoral pursuits.

TARIFF COMMISSION, U.S. The Tariff Commission was created to serve the Congress and the Executive by supplying information on tariff and other problems relating to international trade and international trade policies. (See *YEAR BOOK* for 1940 for information concerning its functions.)

During the past year, the foreign trade problems facing the United States have arisen chiefly from war conditions and from the necessities of national defense. In this situation, the Commission, as would be expected, has changed the emphasis of its work. The demands of the defense agencies on the facilities of the Commission and work on special trade problems arising in a war economy have at times overtaxed its staff and have resulted in a greater volume of work in the past year than at any period in its history. However, it has continued to gather, analyze, and organize data on foreign trade and foreign trade policies, on technical, tariff and other questions relating to import problems and import needs, and on domestic industry and its competition from imports.

The Commission's work on national-defense problems varies widely, but consists principally of technical and economic research, frequently including field work, consultation with and expert advice to defense agencies; cost-of-production investigations, usually necessitating special field inquiries; statistical compilations and analyses; and the service of its personnel on interdepartmental committees. Because of the type of information supplied and the purpose for which it is intended, the work done by the Commission on defense matters is as a rule confidential, and, therefore, no detailed account of it can be given. A few of the items covered by some of the studies are: Copper, long-staple cotton, foods, Douglas-fir-lumber industry, crude drugs, rubber, mica, wool textiles, raw silk and silk waste, cork, lend-lease purchase of fish, stock piles, priorities, factors affecting prices of certain commodities.

The Commission has continued its assistance to the Department of State in the work on the trade agreements program and its work for the Committee for Reciprocity Information. In the past year a supplementary trade agreement was concluded with Canada, and a new agreement was negotiated with Argentina. Negotiations were also undertaken for trade agreements with Uruguay and Iceland and a supplemental agreement with Cuba. (See articles on those countries.) Work on these agreements, however, represents only a small part of the total work on trade agreements. United States trade with practically all of the non-Axis countries has been reviewed in order to obtain the basic data for discussions of possible new trade agreements or revisions of those already negotiated. In fact, the Commission's activities on trade agreements, especially during the latter half of the year, were even greater than usual.

The data obtained by the Tariff Commission on various commodities are kept current so that the

information supplied to defense agencies and to the trade-agreements organization may be of the greatest value. For that reason, much field work has been carried on recently.

The Commission completed and issued during the past year its report on *The Foreign Trade of Latin America* and a report on *Latin America as a Source of Strategic and Other Essential Materials*. Shortly after issuance in July of the exchange-control regulations affecting Japan, the Commission issued a report on *United States Imports from Japan and Their Relation to the Defense Program and to the Economy of the Country*. Other reports include one on the *Possibilities of Producing Rubber in the United States and Rubber Conservation*, as well as one on *Earthen Floor and Wall Tiles* and one on *Hogs and Hog Products*. Approaching completion is a report on *German Trade and Trade Policies*.

There are pending before the Commission two investigations requested by the Senate. One of these, concerned with wood pulp and pulpwood, was initiated in August, 1939, but was later suspended because of the changes which took place in the trade soon after the war began. The investigation will be reopened whenever circumstances appear to warrant. Another concerns red-cedar shingles. This investigation is rapidly nearing completion. An investigation of the Puerto Rican needlework industry undertaken at the request of the Administrator of the Wage and Hour Division in 1940 was later discontinued. An investigation of wheat under section 22 of the Agricultural Adjustment Act of 1933, as amended, resulted in a Presidential proclamation placing an annual quota of 800,000 bushels on imports of wheat and a quota of 4,000,000 pounds of flour. A supplemental investigation of cotton under section 22 resulted in the President's exempting from quota restrictions imports of cotton having a staple $1\frac{1}{8}$ inches or longer. Another supplemental investigation was instituted by the Commission on Nov. 12, 1941, to determine whether import restrictions may be suspended on certain cotton and cotton-waste items. Under the so-called flexible provision (section 336) of the Tariff Act of 1930, an investigation on crab meat was instituted and completed during the year. As a result of this investigation, the duty on crab meat was increased by Presidential proclamation. See ECONOMIC WARFARE, BOARD OF.

TAX ANTICIPATION NOTES. See PUBLIC FINANCE.

TAXATION. National defense outlays, which aggregated \$6,301,000,000 in the fiscal year ended June 30, 1941, were scheduled to reach \$23,996,000,000 in the fiscal year 1942. Although the Administration abandoned its original policy of meeting two-thirds of Federal outlays out of taxes and one-third by borrowing, nevertheless sharply higher Federal taxes were needed even to maintain the new policy, enunciated in the President's budget message in January, 1942, of defraying only 40 per cent of Federal expenditures by means of taxation.

The yields from Federal income taxes for the fiscal years ended June 30, 1940 and 1941 compared as follows:

FEDERAL INCOME TAX RECEIPTS
[Fiscal Years Ended June 30]

	1940	1941
Corporation Taxes	\$1,120,581,550.75	\$1,841,409,855.14
Individual Taxes	982,017,376.17	1,314,265,806.56
Total Income Taxes	2,102,598,926.92	3,155,675,661.70

The 1941 Revenue Act. The Revenue Act of 1941, which became law September 20, was designed to produce \$3,553,000,000 of additional revenue for the Treasury annually, a record for any one revenue measure. Congress did not adopt all of the proposals originally advanced by the Treasury, such as the elimination of the option to file a joint return for husband and wife and the compulsory use of the invested capital base exclusively in the computation of excess profits taxes.

The greatest change was effected by the law in the taxation of corporations. Excess profits taxes were imposed before, rather than after, the deduction of corporate normal taxes, the rates were raised from 25-50 to 35-60 per cent, and corporations using the invested capital base were allowed 8 per cent on the first \$5,000,000 and only 7 per cent on the balance of invested capital before determining their excess profits. Newly-invested capital was to be included at 125 per cent. The normal corporate income tax rate was made 24 per cent, with a surtax of 6 per cent on the first \$25,000 of net income and 7 per cent on the balance. The imposition of the surtax was designed to make interest on partially tax-exempt Government bonds subject to tax when held by corporations, since such interest is subject to surtaxes but exempt from normal taxes. Banks were especially affected by this surtax. The capital stock tax rate was raised from \$1.10 to \$1.25 per \$1,000 of declared value, and a new declared value was allowed for 1941.

Personal income taxes also were increased sharply, particularly upon the middle income brackets. The surtax was made applicable to all taxable income, instead of to taxable income in excess of \$4,000. On the first \$2,000 of surtax net income, the rate was made 10 per cent, as compared with the previous 4.4 per cent rate. On \$10,000 surtax net income, the surtax rate was made 29 per cent, as compared with 15.4 per cent formerly. The exemption for a head of a family was reduced from \$2,000 to \$1,500, and for single persons from \$800 to \$750. The withholding tax for nonresident aliens was raised from 16½ to 27½ per cent. An Optional Tax Chart was issued to permit taxpayers with gross incomes of \$3,000 or less to pay a tax computed for them as a round amount, the maximum being \$197 for single persons earning \$2,975 to \$3,000.

Estate and gift taxes were increased greatly. Thus, the net Federal estate tax on a net estate of \$100,000 was made \$9,500, as compared with a tax of \$4,620 that would have been payable under the old law. New excise taxes that went into effect October 1 included a 6 per cent tax on local telephone bills and a 10 per cent tax on long-distance telephone calls costing more than 24 cents; a motor vehicle stamp tax of \$5 a year; an admission tax of 1 cent for each 10 cents of admission charge; a tax of \$5 to \$200 on boats, and the imposition of the 11 per cent tax on club dues of more than \$10 a year, instead of the old \$25 minimum. Other excise and miscellaneous taxes covered by the law, with old and new rates, are given in the table at the top of page 644.

The Revenue Act of 1941 also provided for a joint Congressional committee, with the Secretary of the Treasury and the Director of the Budget as

Description of tax	Old	New
Automobile truck and bus chassis	2 1/2%	5%
Automobiles, etc.	3 1/2%	7%
Automobile parts	2 1/2%	5%
Brandy	\$2.75	\$4
Distilled spirits	\$3	\$4
Furs		10%
Jewelry		10%
Liqueurs, cordials, etc.	1 1/2%	3 1/2%
Matches, generally		2%
Matches, fancy wooden	5 1/2%	5 1/2%
Musical instruments		10%
Photograph records		10%
Photographic apparatus (not x-ray film)		10%
Playing cards	11%	13%
Radios, phonographs	5 1/2%	10%
Refrigerators, mechanical	5 1/2%	10%
Safe deposit boxes	11%	20%
Telegraph messages		10%
Tires	2 1/2%	5%
Tubes	4 1/2%	9%
Washing machines		10%
Wines, sparkling	3%	7%
Wines, sparkling	1 1/2%	3 1/2%
Wines, still	8%	8%
Wines, still	18%	30%
Wines, still	30%	65%

members, to recommend reductions in nonessential expenditures.

The annual yield expected from the new revenue law was to be obtained as follows, according to Treasury estimates:

Corporation tax changes	\$1,382,000,000
Individual income tax changes	1,144,000,000
Excise and miscellaneous taxes	847,000,000
Capital stock, estate and gift taxes	180,000,000
Total	3,553,000,000

The Administration sought to have another tax bill passed, both to raise more revenue and to effect "administrative" changes to eliminate what the Treasury regarded as inequalities in the law. Congress refused to take up the subject of taxation, however, until the 1942 session.

Federal Tax Policy. The curtailed supply of consumer goods and the rapidly expanding total of governmental expenditures centered attention upon the problem of preventing inflation through the curtailment of available purchasing power. This objective called for a modification of the New Deal policies designed to redistribute the national income and expand purchasing power among the lower income groups of the population. President Roosevelt made clear in his budget message, however, that there would be no reversal of the older policy of making the higher income groups and corporations bear the brunt of the tax burden. "The emergency does require measures of a restrictive nature which impose sacrifices on all of us," he stated. "But such sacrifices are themselves the most compelling argument for making progressive taxes more effective. The anti-inflationary aspect of taxation should supplement, not supplant, its revenue and equity aspects."

Among the tax changes favored by the Administration to carry out this policy of making the tax structure even more progressive in character were:

1. Taxation of future issues of State and municipal bonds.
2. Lower exemptions in estate and gift taxation.
3. Reexamination of "privileged treatment given certain types of business in corporate taxation." Existing depletion allowances for petroleum and mining companies and deductions of accrued interest, even if unpaid, from taxable income were among examples of such "privileged treatment" cited from time to time.
4. Taxation of all "excessive profits," even if not arising from the defense program. Secretary

of the Treasury Morgenthau suggested during the year that a tax of 100 per cent be levied on all profits in excess of 6 per cent on the investment, a proposal that evoked a storm of protest on the ground that it would penalize efficient managements and virtually eliminate the functioning of the profit motive in industry.

5. "Technical inequities and discriminations" were to be eliminated.

For the purpose of fighting the inflation danger, the major tax proposals advanced during the year were a withholding levy of 10 or 15 per cent on wages, salaries, and some other types of income, collected at the source, and a general sales tax. It was also suggested that the Social Security payroll taxes should be raised during the war period, both to provide additional funds that could be invested in Government securities immediately and to build up a reserve from which benefits could be paid those made idle by the curtailment of armament activity after the war. President Roosevelt stated unequivocally, however, that he opposed "the use of payroll taxes as a measure of war finance unless the worker is given his full money's worth in increased social security."

At the turn of the year, therefore, the tax policy of the Administration was still based on social reform far more than on the anti-inflation objective.

State and Municipal Taxation. Expanding industrial activity and increased employment increased tax collections of most States and municipalities. Such tax collections for 1941, with comparisons for the two preceding fiscal years, were estimated as follows:

STATE AND MUNICIPAL TAX COLLECTIONS
(in billions of dollars)

	1939	1940	1941	1942
Excluding Payroll Taxes	7.4	7.9	8.3	8.8
Including Payroll Taxes	8.2	8.7	9.2	9.8

States and cities were urged by Chairman Mariner S. Eccles of the Board of Governors of the Federal Reserve System not to reduce taxes generally, but to use the increased revenues to pay off debts and to build up reserves, so that they would be in position to launch enlarged public works and housing programs after the war to offset in part the decline in armament activity at that time. However, there was strong support in other quarters for reductions in State and municipal taxes, in view of the very sharp increase in Federal taxes to which all taxpayers were subject. In a number of States and cities, some tax reductions were effected.

Seven States increased alcoholic beverage taxes during 1941. Arkansas raised its tax on wines and brandies from 50 to 60 cents a gallon, and on malt liquors from 3 to 20 cents. The consumers' sales tax on beer was raised from \$3.50 to \$5. A tax of \$1.12 a gallon was imposed on spirituous liquors, and an additional consumers' sales tax of 3 per cent of the wholesale price of spirits. Florida raised her tax on alcoholic beverages, including wines, from 20 to 30 cents per gallon, with a further tax of \$2.40 per gallon on beverages containing more than 48 per cent alcohol by weight. Georgia, Illinois, North Dakota, South Carolina, and Texas also increased their taxes on spirits, wines, or both. These repeated increases in State and Federal liquor taxes caused concern in the trade, where it was feared that bootlegging would thus be stimulated. Delaware, on the other hand, reduced her wine tax from 40 to 25 cents a gallon.

Several States changed their chain store taxes. Florida's new chain tax law imposed a graduated tax of \$10 to \$400 per store on chains, based upon

the number of stores in the chain wherever located, with a supplementary tax of \$10 for each \$1,000 of merchandise inventory on the premises of each store or warehouse. Iowa exempted stores of chains operating solely in unincorporated villages, or where each store owned is within eight miles of every other store. Texas exempted from the chain store tax gasoline filling stations, at least 75 per cent of the business of which consists of selling, storing, or distributing petroleum products, and religious book stores. Utah imposed a graduated annual license fee for chain stores. The Minnesota Supreme Court upheld the graduated chain store and mail order tax in that State.

Eight States enacted use fuel taxes, the highest being 7 cents a gallon in Tennessee. Temporary gasoline taxes previously in effect were extended in eight States. Maryland imposed a tax of 5 per cent on investment and 2 per cent on other income of individuals, while Minnesota imposed a net income tax of 8 per cent on national and State banks, in lieu of all other bank taxes except real property taxes. New York, on the other hand, dropped the 1 per cent emergency tax on personal incomes for 1941 and thereafter, while South Dakota lowered its income tax rates. California proposed an amendment to the State constitution to levy an annual tax on insurers upon business done within the State, the rate on the premiums being set at 2.55 per cent for 1943 and 2.35 per cent after 1947.

In the field of railroad taxation, most attention was given New Jersey's new law, setting a flat tax of 3 per cent on railroad property and imposing a franchise tax based on earnings. Efforts were launched by Jersey City, however, to upset this law in the courts.

TELEGRAPHY. Permissive legislation authorizing the merging and consolidation of the facilities of telegraph companies in the United States was recommended by a subcommittee of the Senate Interstate Commerce Committee after an extended series of hearings and investigations. Reported as representing the consensus of opinion of all classes of witnesses—labor, finance, management, government—the committee's report recommends consolidation of all telegraph facilities into two operating systems, one for domestic carriers and another for international carriers. The principal domestic carriers are American Telephone & Telegraph, Western Union, and Postal, mentioned in the order of their size and corporate strength. The impending financial collapse of Postal (in spite of a \$5,000,000 RFC loan in 1940) has been a large factor in precipitating the present situation. The Senate Interstate Commerce Committee has approved its subcommittee's report, and the next step required is the adoption by Congress of corresponding amendments to the Communications Act. Such would allow the telegraph companies to merge under stipu-

lated conditions and subject to the approval of the several government agencies regulating them, as telephone or electric-power utilities now may merge subject to the approval of the government agencies regulating them.

Typical of the defense and wartime problems met by the industry is the 30,000-mile printing-telegraph network established by Western Union for the Civil Aeronautics Administration to link 175 major airports and a hundred or so other related points for instant and simultaneous communication.

One of the most important technical developments of the year—said to be as important to telegraphy as frequency-modulation is to radio broadcasting—is known as the "varioplex." The varioplex system of telegraph operation makes a better and more flexible use of telegraph-line facilities possible. It provides each pair of stations connected together with an ever-ready two-way channel for the exchange of traffic, which channel through the medium of electro-mechanical devices automatically adjusts its capacity to meet the needs of the moment.

Newly established international radiotelegraph circuits include: a link direct to Brazzaville, French Equatorial Africa (supplementing circuits now operating to Monrovia, Liberia, to Leopoldville, Belgian Congo, and to Cairo, Egypt), to Australia, establishing direct communication to the Pacific continent for the first time; and a second circuit direct to Moscow. See CENSORSHIP, OFFICE OF; DEFENSE COMMUNICATIONS BOARD.

G. ROSS HENNINGER.

TELEPHONY. Record demands for telephone service in 1941 brought an estimated total of 1,750,000 new telephones into service in the United States, boosting the grand total to a new high estimated at 23,620,000. The Pearl Harbor attack by the Japanese Dec. 8, 1941, made that day by far the busiest day in the entire history of long-distance telephone service. The long-lines department of A.T. & T. reported a total of 188,000 long-distance calls over its facilities for that day, which was Sunday at that. For the year the total number of long-distance calls increased by about 30 per cent over 1940, when the figure was 1,030,000,000. In terms of daily long-distance traffic, A.T. & T. reported the average at the close of 1941 to be from 40 to 50 per cent higher than at the beginning of the year; total average daily calls increased from 79,000,000 in 1940 to about 85,000,000 in 1941. Although its conversion and replacement program had come virtually to a standstill because of wartime shortages in strategic materials, A.T. & T. reported that by the close of the year it had installed some 950,000 new dial-operated lines, bringing the system total to about 63 per cent dial-operated. About 80 per cent of the telephone instruments in service are the modern handset. Total new telephone plant added by A.T. & T. during the year amounted to about \$420,000,000, and would have been much more if equipment had been procurable.

The International Telegraph and Telephone Corp. reported that for its properties in nine nations, most of them in South America, the net increase in telephones for the first nine months of 1941 was a total of 39,460 in spite of the shortage of much essential equipment. Early in the year the telephones in La Paz, Bolivia, were added to the South American network which now interconnects some 800,000 South American telephones and gives them access to direct international connections to other parts of the world. Largely driven by war condi-

tions in Europe, this company enlarged its manufacturing subsidiary in the United States by purchase of the Federal Telegraph Company from the Mackay Corporation, and creating the International Telephone and Radio Manufacturing Corporation to manufacture equipment for the South American field. These manufacturing operations were of financial importance to I.T. & T. in 1941. The total number of telephones in the Americas south of the United States is estimated at 1,365,000.

The telephone industry has been a leader in turning its research and engineering resources toward the development and use of substitute materials and toward extensive salvage and re-use of equipment. The industry is faced with the double problem of providing general communication services for growing industrial, commercial, and military uses, and at the same time providing an enormous amount of special field equipment for land, sea, and air fighting forces.

More than a million circuit-miles were added to United States facilities for long-distance telephone service, double the large amount added in 1940. As previously, about half of this expansion was effected on existing open-wire or cable lines by adding carrier equipment which enables a single pair of conductors to carry several separate conversations simultaneously. The project of building a 1,600-mile twin-cable line from Omaha, Neb., to Sacramento, Calif., has been completed westward to Laramie, Wyo. The 600-mile section between Omaha and Laramie, with a branch from Cheyenne to Denver, was placed in operation in December. Work is being rushed at several points along the remaining 1,000 miles between Laramie and Sacramento, with the object of completion by the end of 1942. The eastern long-distance cable system was extended westward to Omaha in 1931, and the \$20,000,000 line from Omaha to Sacramento will give the nation its first transcontinental all-cable telephone route. When this route is completed, it will provide about 100 transcontinental circuits and represent an increase of about 50 per cent over the number of such circuits available at the close of 1941.

Overseas radiophone service expanded by about 70 per cent over 1940 levels, largely to Pacific and Latin-American destinations. Ship-to-shore radiophone services were expanded to include a total of more than 3,400 ships. Important new radiophone links established during the year include a direct circuit between New York and Lisbon and a 4,615-mile radiophone link direct with Moscow. Other such links now operating include London and Buenos Aires, Tokyo and Berlin having been cut off.

Midyear negotiations between FCC and A.T. & T. resulted in a reduction in long-distance rates equivalent to about \$14,000,000 per year. A long-range program of telephone regulation was initiated as a permanent joint effort of FCC and State commissions, with the first joint studies announced to be directed toward problems incidental to the separation of interstate and intrastate properties. The first work is being done by a joint committee of FCC and State-commission accountants and engineers, with the expectancy that representatives of the telephone industry might be invited into collaboration later. See CONSUMERS' COOPERATIVES; DEFENSE COMMUNICATIONS BOARD; TAXATION.

TEMPORARY NATIONAL ECONOMIC COMMITTEE (TNEC). See UNITED STATES under *Congressional Investigations*.

TENNESSEE. An east south central State. Area: 42,246 sq. mi., including 285 sq. mi. of inland water. Population: (1940 census) 2,915,841. The urban population comprises 35.2 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 17.3 per cent (U.S. average, 10.2); elderly (65 years and over), 5.9 per cent. Tennessee ranks 34th among the States in area, 15th in population, and 16th in density, with an average of 69.5 persons per square mile. The capital is Nashville with 167,402 inhabitants; largest city, Memphis, 292,942. There are 95 counties, and 12 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 637,920 pupils enrolled in the State School System of Tennessee during the school year 1937-38. Of this total, 540,274 were enrolled in kindergartens and elementary schools and 97,646 in secondary schools; 107,759 were in separate Negro schools. The instructional staff comprised 22,367 persons, who received an annual average salary of \$726 (U.S. average: \$1,374); 5,128 or 25.5 per cent were men. Expenditures for all public schools in 1937-38 were \$24,288,427, making a total cost per capita of \$8.30 (U.S. average: \$17.15). School buildings (1936 count) numbered 5,966; there were 2,684 one-room, one-teacher schools (1938). The value of public property used for school purposes was \$51,588,794. For higher education, see under *Tennessee* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 7,564, of which 7,519 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 459,170; 377,316 were private and commercial automobiles, and 70,667 trucks and tractor trucks. Gross motor-fuel consumption was 327,055,000 gallons. Net motor-fuel tax receipts were \$22,320,000, the rate being seven cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$5,330,000.

Railways of all classes extended 3,594 miles (Dec. 31, 1939), 1.53 per cent of the total mileage in the United States. Class I steam railways (2,706 miles) reported 13,504,812 tons of revenue freight originating in Tennessee in 1940 and 16,331,270 tons terminating in Tennessee. There are 21 airports and landing fields in the State (13 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 288 civil aircraft in the State and 1,482 airline transport, commercial, and private pilots (1,255 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 6,339,600, as compared with 6,280,000 acres in 1940. According to the latest census, there are 247,617 farms, valued at \$664,474,267, averaging 74.7 acres each. Farm population numbered 1,276,437 or 43.8 per cent of the total. Leading crops with production in 1941 were: Corn, \$52,211,000, 69,615,000 bu.; cotton lint, \$50,100,000, 600,000 bales; hay \$25,850,000, 2,182,000 tons; tobacco, \$20,200,000, 91,523,000 lb.; cottonseed, \$12,549,000, 267,000 tons; wheat, \$5,740,000, 5,415,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census, was \$728,-

087,825 for the year 1939; 2,289 establishments employed 131,874 wage earners who received \$109,661,769 in wages for the year.

Mineral Production. The chief mineral products, in order of value, were in 1939 (with 1940 figures in parentheses): Coal, 5,280,000 short tons valued at \$10,402,000 (6,010,000 short tons); stone, 5,626,210 short tons, \$8,312,977 (5,604,170 short tons, \$6,874,710); cement, 3,677,116 bbl., \$5,613,477 (3,766,807 bbl., \$5,655,635). The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$40,119,893 or .95 per cent of the total for the United States.

Trade. According to the 1940 census there were 2,656 wholesale establishments in Tennessee, employing 23,171 persons, reporting net sales for 1939 of \$839,529,000 and annual pay roll of \$31,353,000. There were 28,198 retail stores with 71,869 employees, reporting sales of \$606,489,000, and pay roll of \$55,924,000. Service establishments numbered 9,415, employing 20,037 persons for \$13,632,000 per year, and reporting a business volume amounting to \$44,037,000. The leading business center of the State is Memphis which reported wholesale sales of \$433,254,000, retail sales of \$135,486,000, and \$12,558,000 for its service establishments. Nashville reported sales of \$127,347,000 wholesale and \$80,389 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Tennessee was \$37,302,000. Under the Social Security program financed by Federal funds matching State grants, 40,154 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$10 15 (U.S. average pension, \$21 08); 35,921 dependent children in 14,343 families received average monthly payments of \$18.59 per family (U.S. average, \$32 73); and 1,645 blind persons received \$11.19 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered approximately 2,600 and received an estimated total payment of \$15,000.

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 7,762 (\$514,000); NYA student work program, 1,580 (\$11,000); NYA out-of-school work program, 11,760 (\$186,000); WPA, 29,449 (\$1,396,000); other Federal emergency projects, 50 (\$4,000); regular Federal construction projects, 23,886 (\$3,365,000). The Farm Security Administration certified subsistence payments totaling \$7,000 for the month to 122 cases.

Legislation. The General Assembly convenes in regular session the first Monday of January in odd years. It is composed of 33 Senators (29 Democrats and 4 Republicans in 1941) and 99 Representatives (83 Democrats and 16 Republicans).

The 72d session of the State Legislature was the second one under the present Governor. Both houses were predominantly Democratic and there was very little partisan legislation and few partisan fights. The session lasted for 41 days, 34 days less than the period set by the State constitution. It was said that the session was unequaled for absence of debate, oratory, or plain open discussions on proposals that were submitted to it. There were 1,151 bills introduced in the House and 81 in the Senate, approximately 400 less than were introduced in the 67-day session of 1939. Of the total passed by both houses, Governor Cooper signed approximately 110 general bills. Following is a brief summary of important enactments:

A million dollar bond issue voted to be used by the Governor in purchasing any lands necessary for the National Defense program.

Creation of a Tennessee State Guard to serve while the National Guard is in the Federal service.

A Sabotage Prevention Act for the safeguard of all National Defense projects established in the State.

An Act to permit National Defense workers to live in Federal Housing projects even though their incomes exceed those set up for the State.

A new half-million-dollar tuberculosis hospital.

Vital Statistics Act brought up to date.

Removal of 10 cents per pound tax on oleomargarine made from domestic oil.

First State-wide uniform State Game and Fish law.

Improvements in Unemployment Compensation and Workmen's Compensation Laws.

The State was redistricted for Congressmen, to make way for another representative, with Davidson County being declared one district. Only the Middle Tennessee counties were affected.

A bill to increase public school funds, advocated by the Tennessee Educational Association, was adopted only in part. The Governor is to retain the right to impound such funds.

A bill to increase the salaries of judges throughout the State was defeated.

The much discussed poll tax repeal bill was defeated early in session.

Finances. Total tax collections in Tennessee for the fiscal year ending in June, 1941, were \$55,309,000 (1940: \$51,826,000). Total sales taxes amounted to \$27,865,000, including motor fuel, \$22,534,000. Taxes on specific businesses ran to \$4,603,000, general and selective property, \$1,284,000, unemployment compensation, \$9,216,000. The net income taxes were \$3,694,000. Cost payments for the operation of general government totaled \$45,271,000 in 1939, the latest year available. (Revenues for the general government for that year were \$64,153,000.) Cost of operation per capita was \$15.74. Total gross debt outstanding in 1941 was \$95,120,000, as compared with \$94,601,000 in 1932.

Officers and Judiciary. The Governor is Prentice Cooper (Dem.), inaugurated in January, 1941, for a two-year term. Secretary of State, Joe C. Carr; Attorney General, Roy H. Beeler; State Treasurer, John W. Harton, State Comptroller, Robert W. Lowe. Chief Justice of the Tennessee Supreme Court is Grafton Green; there are four associate members elected by popular vote for eight-year terms. See FIRE PROTECTION.

TENNESSEE VALLEY AUTHORITY. See DAMS; FLOOD CONTROL; MUNICIPAL OWNERSHIP.

TENNIS. Highlights of 1941 in tennis were the successful effort of Robert L. Riggs, Jr. to regain the men's national tennis championship, and the final attainment of the women's national crown, after fifteen years' perseverance, by Mrs. Sarah Palfrey Cooke. Riggs, who lost the championship to Donald McNeil in 1940, climbed back onto his steed of victory and galloped over Frank L. Kovacs, in four sets, in the final round of the championship matches at Forest Hills, New York. Mrs. Cooke, the first native woman of the East to win the crown since 1908, literally proved that "all comes to those who wait," as she triumphed over Pauline Betz of Winter Park, Fla., to win the trophy she had so long coveted. Kovacs joined with Riggs when the champion turned professional and went on tour, managed by the young football professional, Alexis Thompson.

Curiously enough, after all the "experts" had forecast a general let-down for tennis in 1941, as a result of cancellation of international tennis, and the entrance of Alice Marble and Mary Hardwick into the professional ranks, interest did not fall off. Ladislav Hecht, formerly of Czecho-Slovakia, and Francisco (Pancho) Segura of Ecuador, supplied

a needed bit of seasoning to the play by giving it a touch of internationalism. Segura played one of the most brilliant matches of the year, equaled only by the Riggs-Ted Schroeder semi-final, against Bryan (Bitsy) Grant in the championship.

The national doubles championship was held onto by Schroeder and John Kramer. Mrs. Cooke and Margaret Osborne captured the women's doubles, and Mrs. Cooke and Kramer took over the mixed doubles title. Budge Patty of California won the national junior championship. Joe Hunt of the U.S. Naval Academy possessed the national intercollegiate title, but was not able to enter the national championships. Frank Parker won the clay-court title, and Arthur Macpherson, New York, became the new holder of the veterans' championship. Jacques Brugnon and Meade Woodson, both of California, won the veterans' doubles. Mrs. William V. Hester, Jr., Long Island, was returned leader of the women's veteran title, while Edith Sigourney and Mrs. George Wightman of Boston took the doubles veterans' honors.

Other champions with their titles were: clay-court doubles—John Kramer and Ted Schroeder. Women's clay-court singles—Pauline Betz. Women's clay-court doubles—Jane Stanton and Barbara Brandt. Intercollegiate doubles—Ted Olewine and Charles Mattmann. Women's intercollegiate singles—Katherine Hubbell. Women's intercollegiate doubles—Barbara Brandt and Katherine Hubbell. National indoor champions were: Men's singles—Frank Kovacs. Men's doubles—Don McNeill and Frank Guernsey. Women's singles—Pauline Betz. Women's doubles—Dorothy May Bundy and Pauline Betz. Mixed doubles—Al Stitt and Pauline Betz. Professional championships were won by Fred Perry in the singles, after a hard match with Donald Budge, and by Budge and Perry in the doubles.

TERMITES. See ENTOMOLOGY, ECONOMIC.

TEXAS. A west south central State. Area: 267,339 sq. mi., including 3,695 sq. mi. of inland water, but excluding Gulf of Mexico coastal waters, seven sq. mi. Population: (1940 census) 6,414,824. The urban population comprises 45.4 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 14.5 per cent (U.S. average, 10.2); elderly (65 years and over), 5.4 per cent. Texas ranks first among the States in area, sixth in population, and 35th in density, with an average of 24.3 persons per square mile. The capital is Austin with 87,930 inhabitants; largest city, Houston, 384,514. There are 254 counties and 44 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education conducted by the U.S. Office of Education, there were 1,355,401 pupils enrolled in the State School System of Texas during the school year 1937-38. The instructional staff comprised 47,386 persons, who received an annual average salary of \$1,013 (U.S. average: \$1,374); 9,271 or 21.0 per cent were men. Expenditures for all public schools in 1937-38 were \$90,504,275, making a total cost per capita of \$14.51 (U.S. average: \$17.15). For higher education, see under *Texas* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 22,567, of which 19,088 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 1,719,313; 1,342,861 were

private and commercial automobiles, 812 busses, and 350,440 trucks and tractor trucks. Gross motor-fuel consumption was 1,414,932,000 gallons. Net motor-fuel tax receipts were \$47,530,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$22,422,000.

Railways of all classes extended 16,425 miles (Dec. 31, 1939) 6.99 per cent of the total mileage in the United States. Class I steam railways (13,609 miles) reported 25,276,983 tons of revenue freight originating in Texas in 1940 and 25,480,904 tons terminating in Texas. There are 181 airports and landing fields in the State (53 lighted fields) and 12 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 1,278 civil aircraft in the State and 5,493 airline transport, commercial, and private (4,475 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 26,816,100, as compared with 27,787,200 acres in 1940. According to the latest census, there are 418,002 farms, valued at \$2,589,978,936, averaging 329.4 acres each. Farm population numbered 2,165,611 or 33.8 per cent of the total. Leading crops with production in 1941 were: Cotton lint, \$208,620,000, 2,745,000 bales; cottonseed, \$59,216,000, 1,226,000 tons; corn, \$49,496,000, 73,875,000 bu.; grain sorghums, \$43,254,000, 79,724,000 bu.; sweet sorghums, \$28,247,000, 4,154,000 tons; wheat, \$24,467,000, 27,186,000 bu.; commercial truck crops, \$17,433,000; rice, \$17,000,000, 13,600,000 bu.; oats, \$14,430,000, 37,975,000 bu.; hay, \$12,231,000, 1,551,000 tons; grapefruit, \$8,154,000, 15,100,000 boxes; peanuts, \$6,860,000, 171,500 lb.; potatoes, \$5,133,000, 6,039,000 bu.

Manufacturing. According to the latest census, the total value of manufactured products was \$1,530,220,676 (for the year 1939). For details, see 1940 YEAR BOOK.

Mineral Production. Texas ranks first among the States in value of mineral production. The leading minerals produced in 1939, in order of value, were: Petroleum, 483,528,000 barrels valued at \$478,330,000 (498,126,000 barrels in 1940); natural gas, 979,427,000 M cubic feet, \$141,535,000; sulfur, 1,784,952 long tons, \$28,498,473; natural gasoline, 770,047,000 gallons, \$25,807,000; cement, 7,207,001 barrels, \$12,152,780 (7,383,600 barrels, \$12,198,800 in 1940). The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$701,939,862, or 16.57 per cent of the total for the United States. See TIN.

Trade. According to the 1940 census there were 10,296 wholesale establishments in Texas, employing 64,479 persons, reporting net sales for 1939 of \$2,040,548,000 and annual pay roll of \$86,760,000. There were 85,249 retail stores with 209,841 employees, reporting sales of \$1,803,716,000 and pay roll of \$171,690,000. Service establishments numbered 31,575, employing 61,595 persons for \$41,473,000 per year, and reporting a business volume amounting to \$137,198,000. The leading business center of the State is Houston which reported wholesale sales of \$457,911,000, retail sales of \$193,965,000, and \$24,150,000 receipts for its service establishments. Dallas reported sales of \$475,454,000 wholesale and \$172,904,000 retail; Fort Worth, \$148,386,000 and \$92,976,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Texas was \$83,033,000. Under the Social Security program, financed by Federal funds matching State grants, 138,677 elderly persons were receiv-

ing (as of June, 1941) an average monthly old-age pension of \$18.50 (U.S. average pension, \$21.08); 230 dependent children in 90 families (figures are estimated and do not include Federal participation) received a total payment of \$680. General relief cases, which are supported by State and local funds only, numbered 9,503 and received \$8.72 per case (the average payment for 41 States was \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 14,886 (\$986,000); NYA student work program, 18,883 (\$129,000); NYA out-of-school work program, 22,378 (\$429,000); WPA, 73,850 (\$3,378,000); other Federal emergency projects, 150 (\$14,000); regular Federal construction projects, 30,668 (\$3,583,000). The Farm Security Administration certified subsistence payments totaling \$93,000 for the month to 3,444 cases.

Legislation. The Legislature convenes in regular session on the second Tuesday of January in odd years. It is composed of 31 Senators and 150 Representatives, all of whom are Democrats.

The longest session (171 days) of any Texas legislature ended July 3, 1941, having passed the largest appropriation measures and the greatest single tax law in the history of the State, according to information supplied through the courtesy of Doris H. Connerly, Texas Legislative Reference Librarian. Appropriations totaled more than \$93,000,000, a figure which exceeded by \$15,000,000 the appropriations of any previous session. To offset expenditures, a revenue bill designed to raise some \$25,000,000 in new money was passed. This new revenue law was referred to as the "Omnibus Tax Bill" as it included taxes in several fields, including new, or increased, occupation taxes. It was made necessary chiefly by the increase in amount of old-age assistance, extension of payments under social security laws to the blind and to dependent children, and the matching by the State of funds for teacher retirement. No income tax or general sales tax was resorted to, and Texas still does not have either of these two taxes.

A number of measures to aid in national defense were passed, including the creation of a Texas Defense Guard (numbering 15,000 by December, 1941); lease of lands to the United States for military purposes; encouragement of numerous local (city and county) airports; and making permanent the oil and gas conservation laws.

Other specific measures passed were the following: a stringent anti-strike law (sponsored by the Governor); removal of former limits on truck loads; strengthening of the drivers' license law; allowing divorce because of insanity; assertion of State sovereignty over coastal waters for 27 marine miles; prohibiting use of corporal punishment for the prison system; regulating outdoor advertising of alcoholic beverages; creating a cancer research hospital; creating a Texas Commission on Interstate Cooperation; extending State aid to junior colleges for the first time, prohibiting ticket scalping; and providing greater support for rural schools than ever before. An advertising tax for the rice industry was passed, on condition that the Arkansas and Louisiana laws would be effective, but the Arkansas law was held unconstitutional by the Supreme Court of that State.

There was one called, or special, session, at which only one general law was passed. This was an amendment and extension of the law which allocated part of the State gasoline tax to counties

and to road districts for local roads which become part of the State highway system.

Finances. Total tax collections in Texas for the fiscal year ending in September, 1940, were \$144,696,000. Total sales amounted to \$59,306,000, including motor fuel, \$45,948,000. Taxes on specific businesses ran to \$10,658,000, general and selective property, \$22,276,000, unemployment compensation, \$21,821,000. Cost payments for the operation of general government totaled \$130,133,000 in 1939, the latest year available. (Revenues for the general government for that year were \$188,187,000.) Cost of operation per capita was \$20.51. Total gross debt outstanding in 1941 was \$21,875,000, as compared with \$10,346,000 in 1932.

Officers and Judiciary. Governor W. Lee O'Daniel (Dem.) was inaugurated in January, 1941, for his second two-year term but subsequently resigned in order to succeed Morris Sheppard as U.S. Senator. The Lieutenant Governor is Coke R. Stevenson; Secretary of State, William J. Lawson; Attorney General, Gerald C. Mann; State Treasurer, Charley Lockhart; Comptroller, George H. Sheppard. Chief Justice of the Texas Supreme Court is James P. Alexander; there are two associate members elected by popular vote for six-year terms.

See AQUEDUCTS; FLOOD CONTROL; FLOODS; HURRICANES; NEGROES; PRISONS, PAROLE AND CRIME CONTROL.

TEXTILES. All production records were broken in textiles during 1941, due to the direct and indirect effects of the national defense program—and, after December 7, the national war effort. The result was that for the third successive year a new high was set. *Textile World's* index of mill activity for 1941 approximated 185, on a basis of 1923-25 as 100. This represented an increase of one-third over the index of 142 for 1940, which in turn was 8 per cent over 1939's index of 132, which in turn was 28 per cent over the 1938 index of 103. Just by way of comparison with a better known year, the 1929 index was only 115.

It was that same December 7—Pearl Harbor Sunday—that insured the continuation of the textile boom. For a few months prior to that time there had been indications, even though very much under the surface, of inventory accumulations in certain distributing channels which made probable the need for restraint in production levels. However, when war broke out, all such uncertainty vanished. It became then a question of how quickly the textile mills of the country could supply the vast quantities of military goods, and of industrial fabrics used by plants working on war orders.

The other side of this picture is a different one. Every step along the road toward the increase of textile production for war purposes means inevitable shrinking of the production of goods for civilian use. The situation is not nearly so bad in textiles as in some other industries because there is ample supply of some of the raw materials and also because so large a percentage of textile labor is female. Nevertheless, there is no question that the civilian phase of textile manufacture is facing a steady downward curve, which in fact has already started. As the tax burden becomes heavier, consumer indisposition to buy will probably be added to inability to find the goods.

Silk. The big news in textiles during 1941 concerned the one material whose use sharply declined, while consumption of other textile fibers increased. By its very exit from the scene, silk made news. On July 26, 1941, as the result of the increasing tension between Japan and the United States, the

American Government froze all stocks of raw silk—which meant that no more silk could be used by mills except that already in process.

The disappearance of silk focused attention upon three substitute materials for women's full-fashioned hosiery—nylon, cotton, and rayon. Nylon had made a most successful debut in this field in 1940. If there were an ample supply of nylon, there would be no hosiery problem. However, not only had the output in 1941 far from caught up to the need, but it became increasingly evident that the Government was going to require more and more of that material. Cotton is anything but a satisfactory substitute material for women's full-fashioned hosiery, and in any event the supply of cotton yarns fine enough for this purpose is extremely limited. That leaves rayon. Until nylon is available in sufficient quantity, the ordinary types of rayon will be the major substitute for silk in women's full-fashioned hosiery. It will cause many a headache at the start, due to inferior quality arising from inexperience in production technique. But it will have to do, in war-time.

Other Branches. The story in the other divisions of the textile industry was a story of unprecedented boom. Cotton consumption in 1941 exceeded that of 1940 by about one-third; wool consumption increased by at least one-half, filament rayon made a gain of about one-sixth; and rayon staple use increased about one-third. In wool, the outstanding result of the start of the war was the allocation of supplies of the raw material to mills, for 1942, restricted to a certain percentage of that used in 1941. In cotton, the prospect of continued shortage of certain grades and staples—and particularly those in most demand for some of the major types of military goods—furnished a paradox to the fact of the over-all surplus of cotton as a commodity. In rayon, the consumption was limited, and will continue to be limited for the duration, only by the quantity that can be produced.

Textiles in War. There are certain bottlenecks in textiles so far as the war program is concerned. There is not enough duck to go around and, even though more and more mills are being brought into the picture as manufacturers of that fabric, the situation will continue to be a tight one. Combed yarn supply is not adequate to meet both military and civilian needs, and consequently the latter will suffer. The same holds true in the wool branch, as previously indicated. By and large, however, there is no serious problem in textiles as a war industry. The bulk of the needs of the Army and the Navy will be supplied in ample time and in suitable quality. The man and the woman in the street will suffer, of course, but there is nothing new about that in war-time. Labor will be shoved around, and the return on capital will be sharply decreased, but these too are merely parts of a war picture.

DOUGLAS G. WOOLF.

THAILAND (Siam). A constitutional monarchy of southeastern Asia. Capital, Bangkok. King, Ananda Mahidol. The name Thailand replaced the former name, Siam, by official designation, effective from June 24, 1939.

Area and Population. Area, 200,148 square miles, excluding territory ceded by French Indo-China in March, 1941 (see under *History*). Estimated population on Mar. 31, 1940, 15,718,000 (14,464,489 at

1937 census). Bangkok, capital and chief city, had (1937) 886,150 inhabitants. Ethnically, some nine-tenths of the people of the kingdom are Thai (or Siamese) and Laos. The chief other stocks are Chinese (about 500,000), Malays and Indian (about 500,000 for both combined), Cambodians (60,000), and Europeans and Americans (some 2,000 only, but economically important). The prevailing and official language is Siamese.

Education and Religion. There is free and compulsory primary education, but only about 35 per cent of the adult population are literate. As of Mar. 31, 1939, there were 12,809 government, local public, and municipal schools, with a total of 1,567,745 pupils. Bangkok has two state-controlled universities. The religious composition of the population in 1937 was: Buddhists, 13,752,091; Mohammedans, 626,907; Christians, 69,227; others, 15,880.

Defense. There is compulsory military service for able-bodied males between 18 and 43. Prior to the outbreak of hostilities with French Indo-China in 1940, the army consisted of 26 infantry battalions, 4 cavalry regiments and 1 squadron, 3 battalions of anti-aircraft forces, 9 groups of artillery, and 2 battalions of engineers. The air force had 5 wings and the navy 4 gunboats, 3 sloops, 11 destroyers, 12 torpedo boats, 4 submarines, 2 minelayers, and various auxiliary craft. The defense expenditure estimate for 1941 was 52,308,822 bahts.

Production. In 1939, 83 per cent of the working population was engaged in agriculture and fishing. The chief crop is rice, which is both the main article of diet and the principal export. Production in 1939-40 was 3,420,347 metric tons of cleaned rice; exports in 1940, 1,656,300 tons valued at 127,-324,000 bahts. Other leading crops are tobacco, coconuts, pepper, and cotton. Rubber and tin ore are the most important products after rice. Thailand's international rubber quota for 1940 was 46,-300 metric tons; exports totaled about 43,000 tons. Tin output (1940) was 23,772 long tons and exports 24,080 compared with the export quota of 29,548 long tons. Teak exports rose in value from 7,246,863 bahts in 1939 to 9,544,160 bahts for the first eight months of 1940. Manufacturing is largely restricted to saw mills and rice mills.

Foreign Trade. Imports were 192,292,456 bahts (\$78,013,049) in the calendar year 1939 and 100,-560,741 bahts (\$33,376,110) for the first eight months of 1940. The 1939 exports totaled 206,939,-538 bahts (\$83,963,485) as against 169,672,451 bahts (\$56,314,286) for the first eight months of 1940. Rice, tin ore, rubber, and teak wood are the principal exports; cotton textiles and yarns, foods, iron and steel products, machinery, and electrical goods the principal imports.

Finance. The budget was changed to the Christian calendar year basis beginning Jan. 1, 1941. Including supplementary budgets voted in mid-year, ordinary budget estimates for 1941 balanced at 148,-718,657 bahts and extraordinary expenditure, to be taken from the Treasury Reserve, totaled 56,556,-333 bahts. The Treasury Reserve was 88,413,798 bahts on Sept. 30, 1940. The public debt on Mar. 1, 1940, was £6,269,530 (sterling). A 10,000,000-baht internal loan was authorized in December, 1940. The baht, pegged to sterling at 11 bahts = £1 (or \$0.3659 to the baht, in U.S. currency), exchanged at an average of \$0.4032 in 1939 and \$0.3515 in 1940.

Transportation. As of Mar. 31, 1940, there were 1,935 miles of state-owned railway line in operation and 113 miles under construction. During the preceding year, the lines carried 6,949,430 passengers and 1,442,146 tons of freight. Highways to-

taled 5,574 miles (see ROADS AND STREETS). Government-controlled airlines link the chief cities and foreign lines in 1941 connected Bangkok with the principal centers of East Asia. During 1939-40, a total of 960 vessels of 1,425,989 tons entered the port of Bangkok.

Government. The constitution of 1932 changed Thailand from an absolute into a limited monarchy. A Premier (in 1941 Luang Pibul Songgram) and a Council of Ministers, over which he presided, performed the executive functions but were responsible to an Assembly. Of the Assembly's members, half are elected, half appointed by the crown. King Ananda Mahidol, proclaimed in 1935 after the abdication of King Prajadhipok, is a minor. Save for the period from Nov. 15, 1938, to Jan. 13, 1939, the years of his reign have been spent at school in Switzerland. A Council of Regency exercises his powers; Prince Aditya Dihabha heads it.

HISTORY

Thailand, drawn into the orbit of Japan with increasing speed and violence in 1941, became an important part of the scene of Japan's warlike advance in the Far East. The Thai Government first employed Japanese favor to take territory from French Indo-China but soon found itself closely bound to Japan in foreign trade and threatened by Japanese forces on its French Indo-Chinese border. After vain efforts to gain protection by approaches to Great Britain and the United States, the country was invaded by Japan and forced into alliance with that power—forced in actuality to serve as a stepping stone for the Japanese advance to Singapore and into Burma.

War with French Indo-China. For an account of Thailand's invasion of the neighboring French possessions and of the subsequent terms of peace, see FRENCH INDO-CHINA, under *History*. By agreement

21,750 square miles, to which in part, at least, Thailand asserted claim of former possession.

Peaceful Envelopment by Japan. The same strategy of invasion without blows that had rendered Japan dominant in these French possessions even before the end of the invasion by Thailand now operated against Thailand itself. By the beginning of June, complaint was heard from Japan that Thailand had hurried off from signing the French peace to cultivate relations with Great Britain and the United States, regardless of Japanese interests. There soon followed word that Japan had bought Thailand's production of rubber. The Japanese influenced literature opinion during the summer by publishing in Bangkok, in the Thai tongue, the journal *Khaoparb*. The report spread that Japan would apply for territorial concessions. Japan obtained from the Government a grant of 10,000,000 bahts of credit to aid heavy purchases—almost monopolizing the Thai market—that the Japanese were making. Tokyo raised its legation at Bangkok to the rank of embassy in August and Thailand reciprocated. None the less the Legislative Assembly approved, September 5, a decree putting all the country's resources at the call of defense.

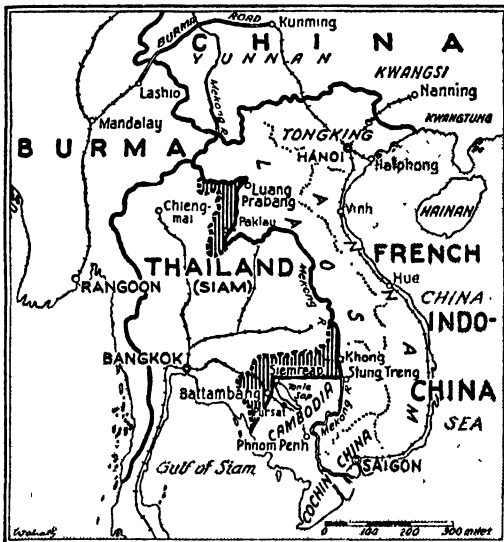

In the meanwhile the United States and Great Britain, taking note of signs in the Japanese press of prospective moves to introduce Japanese troops into Thailand, gave separate but simultaneous informal warnings, August 6, that such a move would be unacceptable. It then gradually appeared that in the face of the double warning the Japanese entry into Thailand, for which troops had reportedly stood in readiness, had been deferred. Thailand continued for a time to display acute alarm over the Japanese threat and of desire for support if invaded. Yet during the next few months the evidence of the Japanese design was so thoroughly covered up that within a few hours, at the most, of the actual invasion, Premier Songgram declared, December 6, "I do not see why any foreign power should invade Thailand." The Bangkok radio echoed him, expressing disbelief of aggressive intention on the part either of Great Britain or of Japan. On December 6, however, the Assembly gave the Premier absolute power, in regard to defensive measures, for 12 months.

Seizure by the Japanese. Japanese forces entered Bangkok December 8, shortly after 9 p.m. Troops had invaded Thailand by landings from the Gulf of Siam and by land from Cambodia. The Thai troops reportedly made some resistance, but most or all of them surrendered December 8. Japan's invasion of Thailand occurred at the very moment when the Japanese Government must have had word of the success of the bombing of Pearl Harbor, assuring a free hand for some time in the East Indies.

The Japanese Ambassador presented at 2 o'clock in the morning of December 8 a demand that the Thai Government give immediate way to Japanese troops moving against British Malaya. The Government sent out at 7:30 a.m. an order to all its troops to cease resistance.

Premier Songgram remained at the head of the Government. He was reported to be following a definitely submissive course with the invaders. Minister of Finance Sompoti and Foreign Minister Manudharm were expelled from the Cabinet. Dispatches indicated that they were loaded with the blame for opposition to the Japanese. British forces on the Burmese border made no serious attempt, in the brief time taken by the Japanese invasion, to move in and defend Bangkok.

THANKSGIVING DAY. See HOLIDAYS.

THEATER. Because the New York stage is the goal toward which virtually all new dramas and theatrical offerings of a professional nature in America are directed, its record is very closely representative of the achievement of the American theater in any given year. And although the creditable and successful productions were considerably outnumbered by the inferior and unsuccessful during the first half of 1941, and indeed until well toward the middle of the latter half, there were at least enough presentations of conspicuous merit in the course of the year to lift it above the level of mediocrity that had characterized its immediate predecessor.

The beginning was peculiarly ominous; the first play to make its appearance was one entitled *The Lady Who Came to Stay*—and she, or it, stayed for exactly four performances. In fact it was only upon the fifth attempt that a work with enduring qualities was brought to light in Joseph Kesselring's *Arsenic and Old Lace*, which continued uninterrupted and triumphantly throughout the year. In this piece dementia and homicidal mania as afflicting an entire family are made the subjects of farcically comic treatment, which was greatly enhanced by the acting of Josephine Hull, Jean Adair, John Alexander, and Boris Karloff as the abnormal elderly brothers and sisters. Next arrived *Mr. and Mrs. North*, a dramatization by Owen Davis concocted from Mr. and Mrs. Richard Lockridge's series of short stories about these characters. This proved a highly agreeable and amusing item as exemplified by Albert Hackett, Peggy Conklin, Owen Davis, Jr., son of the adapter, and several comparably clever associates, and remained current until summer. Then came a musical revue, *Crazy with the Heat*, the outcome of collaboration by a small army of names largely new, which struck a snag and was withdrawn at the end of its first week but presently reappeared and persisted for nearly 100 performances. January's final offering was *Lady in the Dark*, a unique blend of drama, musical comedy, and revue with Moss Hart figuring as author, Ira Gershwin as lyricist, and Kurt Weill as composer. Gertrude Lawrence was the star and her versatile range of talent readily spanned the demands of a particularly exacting role, that of a lady who seeks a solution of her romantic bewilderment in psychoanalysis. Others involved in the intricacies of the plot were Danny Kaye, who later in the year became a star in his own right on the strength of his contribution to the proceedings, Bert Lytell, Victor Mature, of the screen, Margaret Dale, and Macdonald Carey. This also, except for a summer vacation, continued to be a huge success throughout the year.

Just short of three weeks was the career of Louis D'Alton's modern miracle play, *Tanyard Street*, presented with Margo, Arthur Shields, and Barry Sullivan in its chief parts; and still shorter that of Philip Barry's allegorical *Liberty Jones*. But a very light comedy by Francis Swann entitled *Out of the Frying Pan*, peopled by an array of fresh young talent, scored something over a hundred showings. Lincoln's Birthday brought one more of the year's

outstanding, and outlasting, successes in Rose Franken's *Claudia*, a work centering about the character of a young wife whose affections are too evenly divided between her husband and her mother but to whom a crisis brings a proper sense of responsibility. Dorothy McGuire, a recent newcomer, portrayed the title role with great credit, Donald Cook was the husband, and Frances Starr effected a most happy return to the stage in the part of the mother. February saw also a new comedy by the usually dependable S. N. Behrman, *The Talley Method*, but this one, even with Ina Claire and Philip Merivale enacting its principal characters, failed to sustain its author's standard.

Toward the middle of March Katharine Cornell revived Bernard Shaw's satire, *The Doctor's Dilemma*, its first reappearance in New York in fourteen years. She, herself, was the Jennifer Dubedat of this occasion, which she made further memorable by assembling a cast that included Raymond Massey, Clarence Derwent, Colm Keith-Johnston, Whitford Kane, Cecil Humphreys, and Ralph Forbes as the several medical gentlemen concerned, and Bramwell Fletcher as Jennifer's erratic and argumentative artist husband. The revival scored up 112 performances. Meanwhile an only slightly less gratifying record was being achieved by a stage version of Richard Wright's novel, *Native Son*, adapted by Paul Green and Mr. Wright. Directed by Orson Welles, this proved to be a strikingly powerful dramatic exposition of the revolt of an uneducated Negro boy against what seemed to him arbitrary restrictions imposed by white men. For the title part of Bigger Thomas, Canada Lee was lured from other types of colored entertainment and unequivocally made good as an actor.

With April arrived what may quite probably go down in stage history as the most commendable American play of 1941, Lillian Hellman's *Watch on the Rhine*. Concerned with the current war, it presented a phase of the conflict in relation to its inherently possible impact upon the United States, and it provided the basis for superlatively fine acting on the part of Paul Lukas, Lucile Watson, Mady Christians, and George Coulouris, with John Lodge, Helen Trenholme, Eda Henemann, and three uncommonly intelligent children, Peter Fernandez, Eric Roberts, and Ann Blyth, assisting admirably. This, too, was still prospering mightily at the year's end, and had previously received the annual award of the Drama Critics' Circle as the best play of American authorship in the season of 1940-41. The only remaining noteworthy work to put in an appearance before the close of that season and the advent of warm weather was William Saroyan's formless, unclassifiable but nevertheless truly appealing fantasy, *The Beautiful People*. This highly characteristic opus kept Eugene Loring, Betsy Blair, Curtis Cooksey, E. J. Ballantine, and a few more out of other mischief for approximately two months.

Hardly had the vacation season commenced when the summer theaters in every direction began announcing their opening programs, many of them depending, as usual, largely upon established hits of recent vintage, others upon visiting stars playing, apparently, roles upon which their hearts had long been set but for which regular commercial backing had never been found, still others upon tests of new works hopefully designed for New York and the forthcoming winter.

The autumn season opened promptly in early September with Carl Allensworth's *Village Green*, a pleasant, clean little play concerned with a tempest in a teapot in New Hampshire small-town politics. Frank Craven was the star, supported by

his son, John, Laura Pierpont, Perry Wilson, and Joseph Allen, but the piece proved too mild and unsophisticated to flourish long in the metropolitan atmosphere. Then came *The Wookey*, by Frederick Hazlitt Brennan, an amusing and frequently moving drama of war-time London, depicting the effect of the conflict upon a Cockney boatman, played delightfully by Edmund Gwenn. Others importantly involved were Heather Angel, Norah Howard, Carol Goodner, and Horace McNally, and the production lasted out the year. So also, rather surprisingly, did Parker W. Fennelly's *Cuckoos on the Hearth*, the only one of several trifling items imitating *Arsenic and Old Lace* by dealing humorously with crime and murder to develop any lasting qualities. And the success of this one was due in large part to a most engaging character portrayal by Percy Kilbride. Meanwhile the first of the fall musicals, *Best Foot Forward*, utilizing juvenile talent in a prep school setting, with Rosemary Lane as a special feature, was prospering mightily. But interspersed among these few creditable offerings was a considerably larger number of casualties surviving in numerous instances but a week or less, among them George S. Kaufman's initial venture as a producer rather than author, a comedy entitled *Mr. Big*; Gilbert Miller's elaborate and costly presentation of *Anne of England*, remade by Mary Cass Canfield and Ethel Borden from Norman Ginsbury's *Viceroy Sarah*, a London pre-war success, with Barbara Everest imported for the title role and Flora Robson figuring as the Duchess of Marlborough; and *All Men Are Alike*, the American rendering of Vernon Sylvain's farce, *Women Aren't Angels*, likewise from Britain. Even the Theater Guild's revival of Eugene O'Neill's *Ah, Wilderness!*, the first of a projected series, did not quite fill out its appointed time.

Late October brought an improvement in the situation along with several offerings of conspicuous merit and greater durability, subsisting beyond the close of the year. These included Maxwell Anderson's picture of Nazi domination in occupied France, *Candle in the Wind*, with Helen Hayes starred in the role of an American actress courageously devoting her energies and means to an attempt to effect the release, or escape, of her French lover from a concentration camp; *The Land Is Bright*, by George S. Kaufman and Edna Ferber, a three-generation saga of an American dynasty emanating from an unscrupulous "robber baron" and only regenerated in recent times by the call to patriotic service, staged with an imposing cast in which Ralph Theadore, Phyllis Povah, Martha Sleeper, Leon Ames, Flora Campbell, Hugh Marlowe, Louise Larabee, Muriel Hutchison, Diana Barrymore, and a young actress calling herself merely K. T. Stevens were especially prominent; and two musical comedies, *Let's Face It*, with Cole Porter songs, book by Herbert and Dorothy Fields, and with Danny Kaye for its bright, particular star, and the somewhat lower-grade *High Kickers*, featuring Sophie Tucker and George Jessel, the latter also listed as co-author and co-producer.

In early November arrived one of the most delectable lighter plays of the whole year, Noel Coward's *Blithe Spirit*, an appropriately airy ghost story in which the subject of spiritualism is handled comically and quite disrespectfully with the able cooperation of Clifton Webb as a young novelist, Leonora Corbett as the apparition of his first wife, Peggy Wood as his second wife in life and eventually also in the spirit, and Mildred Natwick as the extraordinarily funny medium responsible, to her own surprise as much as anybody's, for the return of both spouses. But another comedy, *The Walrus*

and *the Carpenter*, by A. N. Langley, received a chilly welcome despite the presence in its cast of the capable and popular Pauline Lord, and tarried but briefly. Still another, however, entitled *Spring Again*, by Isabel Leighton and Bertram Bloch, was warmly greeted for the deft and charming acting of Grace George and C. Aubrey Smith who, as co-stars, portrayed the chief characters, and was among those continuing into the new year. And at approximately the same time, and to equally gratifying acclaim, the Maurice Evans production of Shakespeare's *Macbeth* made its appearance and proved that, notwithstanding ill-fated presentations of *As You Like It* and *Twelfth Night* within a few weeks of each other, the Bard of Avon, adequately presented, is still a powerful drawing card. Mr. Evans himself was impressive in the name part, Judith Anderson was highly effective as Lady Macbeth, while Herbert Rudley, Staats Cotsworth, Harry Irvine, and Viola Keats took the other important parts with genuine credit.

As the season progressed greater stability was achieved and the preponderance of failures over successes was decreased, though the former remained distressingly numerous through November. Yet before that month ended it had witnessed the coming of Cornelia Otis Skinner for the first time, in New York, as a star at the head of her own company instead of as disease, monologist, or protean performer constituting the entire cast of her program. Miss Skinner's vehicle was an adaptation by Guy Bolton of Somerset Maugham's novel entitled *Theater*, the stage version bearing the same name. Though containing nothing of marked originality or startling character, it disclosed the actress as abundantly capable of blending her own work into that of an aggregation while still glowing with stellar preeminence. Among her associates were Arthur Margetson, John Moore, Viola Roache, Helen Flint, and Frederick Bradlee. And still another of the month's offerings was the play concocted by Jerome Chodorov and Joseph Fields from a series of stories by Sally Benson in *The New Yorker* about the Graves family, its juvenile members particularly, and their friends. *Junior Miss* was the title of the piece, which, largely by virtue of the captivating performances of Patricia Peardon, as Judy Graves, and Lenore Lonergan, as her boon companion, Fuffy Adams, jumped into immediate and sustained favor. After a final cluster of casualties November closed with the Theater Guild's production of Sophie Treadwell's *Hope for a Harvest*, a serious, interesting, purposeful but not quite convincing drama on the back-to-the-soil theme, which, despite admirable acting on the part of Frederic March, Florence Eldridge, Alan Reed, and several others, just missed seeing the old year out.

With December the percentage of quick failures dropped sharply, though obviously the lasting qualities of some of the month's arrivals still remained for time to determine as 1941 passed into history. There was, however, no doubt at all as to the success of several of them, including the first, *Sons o' Fun*, Olsen and Johnson's sequel to the seemingly perennial *Hellzapoppin*, which, nevertheless, finally took its departure just after its substitute was installed. The new entertainment turned out to be more of the same, with its two head men still hectically involved and with Carmen Miranda present to supply much of what they could not. A new Hammerstein-Romberg operetta, *Sunny River*, met a polite, but unenthusiastic, welcome as a highly creditable example of a type of musical offering that had gone out of style, and although it con-

tained a goodly supply of agreeable melodies, well sung by Bob Lawrence and Muriel Angelus, its future career seemed scarcely promising. But another unequivocal hit was scored by a gruesome, shivery thriller, replete with almost unendurable suspense—Patrick Hamilton's *Angel Street*, known in its preliminary stages by at least two previous titles. It contains but five characters, of whom one is a wife, another the husband striving to rid himself of her by mental torture, and a third the police inspector who appears just in the nick of time. These three were capably portrayed by Judith Evelyn, Vincent Price, and Leo G. Carroll, respectively. Presently along came another thriller, violently melodramatic, in *Brooklyn, U.S.A.*, an uncomfortably realistic picture of the operations of the underworld, its gangsters and murder ring, on the basis of actual disclosures in the course of the investigation recently made in what was once known, within the memory of many now living, as the "City of Churches." John Bright and Asa Bordages were the authors, Eddie Nugent the chief, and worst, of the gang. In striking contrast to this opus was Fritz Rotter and Allen Vincent's *Letters to Lucerne*, a tender and sometimes moving play concerned with the effect on several young girls of various nationalities, all pupils in a Swiss boarding school, of the war and the letters on its progress they receive from their respective homes. Katharine Alexander enacted the schoolmistress with great charm, Grete Mosheim, as the German member of the group, created an extremely favorable impression in her English-speaking debut, while five other young ladies of the cast were distinguished chiefly as being daughters of well-known fathers.

Christmas night brought Eddie Cantor back to the stage after several years devoted to Hollywood and the air. The medium for his return, made to order, was *Banjo Eyes*, a musical version of the popular farce of a few years back, *Three Men on a Horse*, rather highly seasoned with a not too palatable flavoring and equipped with tunes, lyrics, and an abundance of characteristic Cantor opportunity. Audrey Christie and Lionel Stander also came in for a share of the honors. The final offerings of the year were Clifford Odets' *Clash by Night*, a disappointingly unoriginal revamping of the old domestic triangle theme competently acted by Tallulah Bankhead, Joseph Schildkraut, and Lee J. Cobb, and *In Time to Come*, by Howard Koch and John Huston, a biographical drama of certain chapters in the life of President Woodrow Wilson, with a special, and doubtless deliberate and timely, relation to the effect upon him of the lost cause of his dream, the League of Nations. Richard Gaines, in the central role, captured admirably the Wilson spirit without attempting too much in the way of physical resemblance, while Russell Collins assumed the part of Colonel House, William Harrigan that of Tumulty, Bernard Randall of Judge Brandeis, and, among others, Nedda Harrigan that of Mrs. Wilson with comparable fidelity.

England. In Great Britain the fortunes of war that made play production and play-going in London a very uncertain proposition operated, on the other hand, to the considerable advantage of the smaller and less harassed communities to which a large portion of the population had migrated "for the duration." The result was an unusual number of touring organizations presenting condensed versions of the classics, as well as of established favorites of recent vintage, in such theaters or makeshift substitutes as the various towns afforded. Much of this activity was made possible through the good

offices of the Council for the Encouragement of Music and the Arts, an outgrowth of the Pilgrim Trust established by an American, the late Edward S. Harkness, of New York. Shakespearean offerings were prominent in the bills, as were also such pieces as Emlyn Williams' presentation of his own *The Light of Heart* and a revival by the reliable Marie Tempest of *The First Mrs. Fraser*.

But even in London the theaters doggedly pursued their course to such extent as the conditions of the moment might make feasible, closing down when the bombing raids became too strenuous, pertinaciously opening again when a respite permitted. Obviously the circumstances were not conducive to much new effort, at least until spring, when the introduction of the English equivalent of Daylight Saving Time—at first an advance of one hour, later of two—made possible two performances of almost any given play between 4 p.m. and nightfall, when air raids might be expected. By late April eight West End theaters were running, by mid-August eighteen, and by Christmas twenty-eight or more; and this despite the fact that many of the younger actors were in the Service while others were touring in distant regions. One specific result of war conditions was the profitable extension of the annual Spring Shakespeare Festival at Stratford from April until September, in the course of which at least eight of the plays were staged, commencing with *Much Ado About Nothing* and closing with *Romeo and Juliet*.

As conditions improved, London saw more and more new pieces, largely of a light, musical or revue character, though not entirely so. There was a rather inconsequential item called *Under One Roof*, by the young actor, Kim Peacock. There were also return engagements of *Shepherd's Pie*, a revue, and of Geoffrey Kerr's *Cottage to Let*, both after previous runs that had been rudely interrupted by Nazi raids. Other light and amusing entertainments that followed were the musical *Up and Doing*, with Leslie Henson and Binnie Hale, the elaborate *Black Vanities*, still another revue, *Rise Above It*, with Hermione Baddeley as head fun-maker, and a four-week visit of the D'Oyly Carte Opera Company to its old home, the Savoy Theater associated with the Gilbert & Sullivan tradition for half a century.

July saw the summer boom well under way and virtually recaptured the pre-war first-night atmosphere with the world premiere of Noel Coward's *Blithe Spirit*, with Cecil Parker, Kay Hammond, Fay Compton, and Margaret Rutherford in its four all-important roles. Esther McCracken scored an improvement upon her own earlier *Quiet Wedding* with a sequel, entitled *Quiet Week-end*. Stanley Lupino registered a substantial hit with *Lady Be-have*, the first regular musical comedy to put in an appearance since the war began, with himself as author, producer, and principal performer. Dame Sybil Thorndike enjoyed a short season in two dramas of as heavy a nature as Shakespeare's *King John* and the *Medea* of Euripides, and a new Open Air Theater was opened in Southwark Park with *The Taming of the Shrew*, wherein Claire Luce figured with real credit as the Katharine. With mid-summer came a new Firth Shepherd revue, *Fun and Games*, starring the same comedians who had created such jollity in *Shepherd's Pie*, and, as an added attraction, a new and very charming young dancer, Carol Raye, who made off with most of the honors.

The shortening days of fall necessitated a readjustment of the theater schedules but had slight effect on the general prosperity. Offerings were stag-

gered, some shown in the afternoon, some in the evening, but most of the musical items in both. Yvonne Arnaud was seen in Margery Sharp's adaptation of her own book, *The Nutmeg Tree*, which had had a brief career in New York in 1940 as *Lady in Waiting*. Dr. A. J. Cronin's *Jupiter Laughs* also reached the London stage via New York's and with about as unenthusiastic a greeting, though achieving a longer stay. A new Russian item, *Distant Point* by Alexander Afinogenov, was accorded a special interest by reason of the unhappy circumstance of its author being killed in an air raid on Moscow at about the time of his play's presentation. In a translation by Hubert Griffith, it disclosed a refreshing charm and simplicity marred, now and then, by too great insistence upon something resembling Russian propaganda. The closing weeks of the year contributed one more musical hit, *Get a Load of This*, containing a mild suggestion of America's *Hellzapoppin*, with Winston Churchill's son-in-law, Vic Oliver, as its featured performer; a pleasant little comedy by Kenneth Horne, of the R.A.F., called *Love in a Mist*, charmingly enacted by Richard Bird, Michael Shepley, Ann Todd, and Majorie Rhodes; the first London productions of *The Man Who Came to Dinner*, which had Robert Morley as a logical player for its title part, and of John van Druten's *Old Acquaintance*, welcomed as a superbly written trifle and with its two lady novelists delightfully portrayed by Edith Evans and Marian Spencer, Miss M. J. Farrell's *Ducks and Drakes*, disappointing, for a deficiency in humor, by comparison with the earlier *Spring Meeting*, of which she was a co-author, a new play about London and air raids, written with intense sincerity under extreme emotional stress by Emlyn Williams, entitled *The Morning Star*, wherein, as with *The Wookey*, a London Cockney rises to the emergency—a charwoman this time, personated by Gladys Henson, and, finally, a comedy-thriller, *Warn That Man*, cut to the measure of another Cockney character actor, Gordon Harker, by the Vernon Sylvaine hitherto identified with farces. The holiday season witnessed the familiar quota of fantasies, pantomimes, ballets, and revivals, including *Peter Pan*, in a new investiture, and that other perennial, *Little Women*.

Ireland. Dublin, meanwhile, was undergoing disappointment, because the renaissance of play-writing that had been expected to follow the enforced cessation of foreign tours on the part of her principal dramatic organizations, the Abbey and Gate Theater companies, and the growing impatience of the public with the familiar, oft-repeated standard works, had not materialized. Authors were active but deficient in originality and initiative. *Lord Edward*, by Lady Longford, proved to be merely a pedestrian reversion to Irish history, and *Hamilton and Jones*, the first work for the theater by the Leinster poetess, Winifred Letts, was found interesting but unimportant. New pieces by St. John Ervine and George Shields were patterned along stereotyped lines.

Australia. Wartime, while the conflict was confined to the Northern Hemisphere, was found opportune, also, for theatrical trouping in distant Australia, whither most of the native-born players were returning from London, resulting in a play-going boom in such centers as Melbourne and Sydney. A marked preference was manifested for straight drama, and repertory organizations presenting much the same recent works as had been seen in New York and London prospered accordingly. By October one such company from Sydney, that had been booked for a brief season in Mel-

bourne with *Susan and God* for its attraction, was celebrating its hundredth performance there. And at about the same time, a Gilbert & Sullivan Opera company, with several bona-fide D'Oyly Carte members in its cast, that had been dividing its time between Australia and New Zealand for a couple of years, was moved to continue its tour into the third year. Ten of the familiar items figured in its repertory, along with two not by Gilbert or Sullivan. During the season, the first new play by an Australian to be done professionally in Australia in five years made its appearance.

Mexico. Mexico, and specifically Mexico City, found its Pan-American Theater developed from modest beginnings to a point, in its fourth repertory season, where the Palace of Fine Arts was required to house its offerings, which are given sometimes in English, sometimes in Spanish. An interesting item of the year was *Lazy Monday*, by Margarita Uruea, who has been called the Mexican Clare Boothe. Another work, of at least semi-native origin, in the schedule was *Mañana Is Another Day*, first seen in 1940, the joint product of Theodore Apstein, a naturalized Mexican, and Dwight Morris, of New York. Several of the actors in the aggregation likewise hailed from the United States and London, and a number of the most popular repertory features were by British playwrights—*Ladies in Retirement*, *Outward Bound*, and *Hay Fever*.

France. As for France, her theater has been described as dead by one who knows. Henry Bernstein, dean of French dramatists but now a resident of the United States and a prospective American citizen, holds play-writing there under prevailing conditions to be impossible, though the "death" he records will doubtless prove subject to eventual resurrection. And a comparable situation may be assumed to exist in the other conquered and occupied countries, including Scandinavia.

Germany. But the German theater, meanwhile, experienced a boom, even though under circumstances politically controlled. Frequent new works were disclosed but proved to be of little account. The preference was strong for dramas and subjects of a vintage prior to 1933, especially classics and items of historical character, and the author most in favor was Gerhart Hauptmann. Operettas were, as always, popular—those of Strauss and Lehár in particular. Russian works were definitely under the ban. Even the plays of Bernard Shaw were omitted from the Salzburg Festival by reason of Mr. Shaw's outspoken criticism of the Nazi regime, although the anti-British sentiment did not extend to Shakespeare. And representations of Schiller's *William Tell* were forbidden on the strength of the heroic quality it assigns to a Swiss.

THIRD INTERNATIONAL. See COMMUNISM.

THURINGIA. See GERMANY under *Area and Population*.

TIBET. A dependency of China in central Asia. Area, 463,000 square miles; population estimated at from 700,000 to 6,000,000. Capital, Lhasa, 50,000 inhabitants. Lamaism, a development of Mahayana Buddhism, is the religion of the people. Chief occupations: agriculture, stock raising, wool spinning, and knitting. The principal minerals are gold, borax, and salt. There is a factory for the manufacture of army equipment, uniforms, coins, and paper money. Trade is carried on with China and India.

Civil and religious authority is vested in the Dalai Lama, acting through a prime minister appointed from among the principal Tibetan lamas. The latter is assisted by a grand council of four members. The 14th Dalai Lama is a Chinese peasant boy selected in 1939 as the reincarnation of the 13th Dalai Lama who died in 1933. Enthroned Feb. 22, 1940 (see *YEAR BOOK* for 1940), he took the name of Jampel Ngawang Lobsang Yishey Tenzing Gyatso. During his minority, supreme power remains in the hands of the regent who assumed control upon the death of the 13th Dalai Lama.

TIMOR, Portuguese. A Portuguese possession in the Malay Archipelago, comprising the eastern part of the island of Timor together with the territory of Ambeno and islands of Pulo Caming and Pulo Jako. Total area, 7,330 square miles; population (1940 estimate), 474,363. Capital, Dili (Dilly or Dilli), with about 3,000 inhabitants. Chief export products: Copra, coffee, sandalwood, sandal-root, and wax. Estimated public revenues and expenditures balanced at 44,937,126 escudos for 1939 (escudo averaged \$0.0404 in 1939).

Portuguese Timor came into prominence late in 1941 as a result of the establishment of a Japanese air line—of strategic rather than commercial value—to Dili and the subsequent occupation of the territory by Australian and Netherland troops to forestall a threatened Japanese invasion. See *AUSTRALIA, NETHERLANDS INDIES, and PORTUGAL* under *History*.

TIN. High lights in the 1941 tin story were the Japanese victories in Malaya, especially the taking of Penang where the world's biggest tin smelting industry is located, and the menace to other sources of United States supply with the threat to Singapore, the Netherlands Indies, and especially to the sea routes over which tin must travel. The United States depends for tin entirely upon the outside world, and Malaya produces 75 per cent of the world's supply. Bolivia, the second largest source of world tin, puts out about 40,000 tons of metallic tin per year. The huge tin smelter under construction at Texas City, Texas, scheduled to handle Bolivian imports up to about 20,000 tons a year, will begin to operate April, 1942.

Two other very significant events in respect to tin were the establishment of a ceiling price of 52.03¢ a lb. for domestic sales by the OPM (q.v.) and the renewal of the British cartel to 1946.

Total imports of refined tin in 1941 were about 160,000 long tons, of which about 40,000 tons went into the government stockpile. Tin stocks at the end of 1941 were about 113,000 tons, including both government and privately owned commercial stocks, enough to last the country 13½ months at the 1941 rate of consumption of 100,000 tons for the year. World production rose to 209,500 tons by October, 1941, compared with 187,600 tons in October, 1940.

The government export restrictions of 1940 held throughout 1941. On Dec. 18, 1941, the OPM froze all tin in the United States and on the high seas en route to the United States, forbade sales or deliveries without permission of the Director of Priorities, and announced that all tin would thenceforth be subject to allocation and all future imports sold to the Metals Reserve Company. The OPM issued still another order, December, 1941, cutting the use of tin 50 per cent in unessential industries and denying it entirely, beginning March, 1942, to 29 uses, such as tin novelty articles, including mu-

sical instruments, toys, buckles, ornaments, refrigerator trays, vending machines, etc. This order covered tin, its alloys, and tin scrap and was designed to conserve about 15,000 tons of tin in 1942. Excepted was type metal for printing and publishing, and the tin container industry, which has been taking some 60 per cent of the total tin supply to make about 17,000,000 tin-lined cans per year. An A.E.F. would need so vast a proportion of tinned foods that no chance of saving within this field was seen. The National Academy of Sciences reported in April that 12,000 long tons could be reclaimed from used tin cans; and can-making representatives told the OPM that they could with safety reduce the weight of tin coating on cans by 10 per cent. The most drastic step in the conservation of tin was taken by the WFPB, Jan. 28, 1942, when it slashed into the manufacture and sale of tin cans for beer, candy, baking powder, coffee, cocoa, dog food, petroleum products, spices, and tobacco. In addition, the content of United States pennies was changed by government act, January, 1942, from 95 per cent copper, 4 per cent zinc, 1 per cent tin to 95 per cent copper, and 5 per cent zinc in order to save a yearly 45 tons of tin for war requirements.

Of tin ore bought by the government 24,453 tons had been delivered by the end of 1941; 290 tons were still en route; 253,802 tons were on order, raising 1942's potential imports to 278,545 tons; 90,000 tons were contracted for from Bolivia, 20,000 tons from the Netherlands Indies, and 2,500 tons from Mexico and South Africa. The Metals Reserve Company was receiving Bolivian ore at the rate of about 3,600 tons a month at the end of the year and tin concentrates from the Netherlands Indies at 4,000 tons a month.

Investigations of domestic tin deposits by the U.S. Bureau of Mines and Geological Survey brought the answer, March, 1941, that "no appreciable part of the tin required by American industry can be supplied from known domestic sources, regardless of how great the stringency or how high the price." See *BOLIVIA* under *History*; *GEOLOGICAL SURVEY*.

TOBACCO. The tobacco crop of 1941 in the United States was estimated by the U.S. Department of Agriculture at 1,279,872,000 lb., about 12 per cent smaller than the 1940 crop of 1,455,802,000 lb., and comparing with the 1930-39 average production of 1,394,839,000 lb. The harvested acreage totaled 1,350,500 acres compared with 1,407,000 in 1940, while the 1941 average acre yield was 948 lb., compared with the record of 1,034 lb. in 1940. The value of the 1941 crop (marketing season) was estimated (preliminary) at \$329,338,000 versus \$233,612,000 for 1940. The price per pound received by farmers averaged 24.2¢ on November 15 and 26.2¢ on Dec. 15, 1941, versus 15.0¢ in December, 1940. The production by types was estimated for flue-cured, 650,605,000 lb.; fire-cured, 75,783,000; air-cured, light: Burley, 351,232,000 and Southern Maryland, 29,822,000; air-cured, dark, 34,150,000; and cigar types, 138,280,000, including filler, 68,183,000; binder, 60,315,000; and wrapper, 9,782,000 lb. The decrease from 1940 was accounted for by reductions of about 4 per cent in acreage and about 8 per cent in acre yield. All classes except Maryland and cigar wrappers showed decreases from the 1940 acreage with dark-fired and dark-air-cured acreages showing sharpest per-

centage decreases. Higher yields, however, were made by the latter classes whereas all other classes except cigar filler showed lower yields in 1941 than in 1940. North Carolina continued to lead producing states with 465,235,000 lb., and was followed by Kentucky with 307,375,000; Tennessee 91,523,000; Virginia 91,122,000; South Carolina 66,000,000; Georgia 54,655,000; Pennsylvania 52,518,000; Wisconsin 29,960,000; Maryland 29,822,000; Ohio, 26,025,000; Connecticut 23,502,000; and Florida 11,929,000 lb.

Production of tobacco in other countries in 1941, as estimated by several agencies, was: Turkey 120,503,000 lb. (1940, 135,583,000); Bulgaria 99,207,000 lb. (1940, 110,230,000); Rumania 20,794,000 lb. (1940, 29,949,000); Canada 87,000,000 lb. (1940, 61,100,000); Mexico 33,000,000 lb. (1940, 50,707,000); Manchuria 38,000,000 lb. (1940, 33,000,000); China, flue-cured, 85,000,000 lb. (1940, 123,000,000); Japanese Empire (Japan, Chosen, and Taiwan) flue-cured, 122,000,000 lb. (1940, 120,000,000); India, flue-cured, 49,427,000 lb. (1940, 35,760,000); Java, flue-cured, 13,000,000 lb.; Sumatra, cigar wrapper, 15,900,000 lb. (1940, 24,500,000); and Algeria 50,000,000 lb. (1940, 27,000,000). Crops reported for 1940 were for Cuba 56,130,000 lb.; Chile 21,087,000 lb.; Greece 107,818,000 lb.; Germany, 96,231,000 lb.; Hungary 36,376,000 lb.; and Iran 28,000,000 lb.

Collections of internal revenue taxes on tobacco in the United States for the fiscal year 1941 amounted to \$698,076,891 (1940, \$608,518,444). The taxes on small cigarettes produced \$616,667,234 (1940, \$533,042,544), on large cigars \$13,400,528 (1940, \$12,897,764), on smoking and chewing tobacco \$54,927,764 (1940, \$54,383,803); and on snuff \$6,899,821 (1940, \$6,798,557). The per capita consumption of tobacco products in the United States in 1940 averaged 42 large cigars, 1,370 small cigarettes, smoking tobacco 1.53 lb., chewing tobacco 0.78 lb., and snuff 0.29 lb., totaling 7.45 lb. In 1940 exports of unmanufactured tobacco amounted to 235,741,732 lb., valued at \$44,044,749. See *Annual Report on Tobacco Statistics, 1941* (U.S. Dept. Agri.). See ENTOMOLOGY, ECONOMIC.

TOBAGO. See TRINIDAD AND TOBAGO.

TOGO, French. The part of Togo mandated to France by the League of Nations. Area, 21,893 square miles; population (1938), 780,497. Capital: Lomé (14,106 inhabitants). Chief products—cacao, palm oil, copra, coffee, and cotton. Trade (1939): 91,644,000 francs for imports and 74,227,000 francs for exports (franc averaged \$0.0251 for 1939). Budget (1939): 50,534,000 francs; in addition, there was a railway budget of 12,889,000 francs. Railways extended for a total of 242 miles. Shipping (1938): 386 ships cleared the ports of Lomé and Anecho. The authorities of French Togo remained loyal to the Vichy Government in France in the controversy with Gen. Charles de Gaulle's rival "Free French" council in London.

TOGOLAND. The area of Togo which was confirmed as a British mandate by the League of Nations and attached to the British Gold Coast for administrative purposes. Area, 13,041 square miles; population (June 30, 1940), 391,473. Chief products—palm oil, cacao, kola nuts, coffee, and cotton. Statistics of trade and finance are included in the general totals for the Gold Coast. Administrator, the Governor of the Gold Coast.

TRACK AND FIELD ATHLETICS. Minus the incentive of international competition, track and field athletics held up well in 1941, with two runners, New York's Leslie MacMitchell and Notre Dame's Gregory Rice, dominating the headlines and the record books. Rice won eighteen races, indoors and out, from two miles to three and in kindred metric distances. MacMitchell didn't win all his races, nor set a batch of records, the way Rice did, but the boy from New York's sidewalks was peerless in the classic mile, regarded as top event on any track program.

Rice ran two miles faster than any man ever before when, late in the indoor season in Chicago, he crossed the finish line in 8 minutes 51.1 seconds, shattering his own indoor record as well as Taisto Maki's outdoor figures of 8:53.2 On two occasions Rice blasted his own 8:56.2, hung up in 1940, and he cracked his own three-mile indoor mark with a crackling 13 minutes 51 seconds. He also retained his American indoor and outdoor three mile and 5,000 meter titles, and no less than eleven times hit 9:04 or better in the two-mile romp

Already established as the best intercollegiate miler, MacMitchell took over the field in 1941, and after being beaten in his first indoor start, blasted through to win the Baxter and the Hunter and to run the fastest mile of the year—4:07.4, a feat equalling Glenn Cunningham's competitive record. MacMitchell then set the indoor intercollegiate mark of 4:12, and was undefeated outdoors as he whipped through to the Intercollegiate A.A.A.A., National Collegiate A.A., and National A.A.U. medals. He also won the I.C.A.A.A. half mile in 1:53 and ran a 49-second quarter on the mile relay to lead his New York University team to its first outdoor team title. Four amazing races by MacMitchell on the two days of the Penn Relays gave the N.Y.U. squad three relay titles at Philadelphia. MacMitchell's closest competitor in the mile was Wisconsin's Walter Mehl, who beat Leslie four times and lost five decisions to him.

Altogether there were eight world's indoor records set by Americans in 1941 and seven outdoor marks, and two tied. Rice set the new two-mile mark and then ran the three miles in 13.51, bettering his own standard. Johnny Borican flashed 600 yards in 1:10.2, slightly shadowing Jimmy Herbert's year-old mark. N.Y.U. ran the medley relay in 7.25.3, bettering Texas State's two-year-old record. Allan Tolmich also beat his own universal standard in the 70-yard hurdles by skidding over the timber in 0:08.3. And Joe McCluskey, veteran Fordham alumnus, raced the 2-mile steeplechase in 9:35.4, blasting his own record set up nine years before. In the field events, Earle Meadows set a pole vault mark of 14 feet 7½ inches, and Al Blozis of Georgetown tossed the shotput 56 feet 4½ inches to beat his own mark.

In the outdoor competition, which did not receive much spectator attention, Grover Klemmer, a speedy Californian, went 400 meters in 0:46, beating Archie Williams's five-year-old record and he equalled Ben Eastman's nine-year-old mark of 0:46.4 in the 440-yard dash. The University of California lowered world figures for the mile relay to 3:09.4 and the two-mile relay numerals to 7:34.5, bettering in each case records hung up a year ago by Stanford University. Cornelius Warmerdam, California school teacher, soared over the

pole vault bar at 15 feet 5¼ inches to smash his own record by more than four inches, and Lester Steers, still another Californian, high jumped the incredible height of 6 feet 11 inches. Archie Harris of Indiana broke the American discus record of 173 feet four times and eclipsed Willi Schroeder's 1936 world mark with a prodigious heave of 174 feet 8¾ inches.

Harold Davis, another Californian, tied Jesse Owens' world figures from 100 meters of 10.2, but lost his national 100-meter crown to Barney Ewell, Penn State Negro, who swept all the sprint titles in the I.C.A.A.A. and N.C.A.A., narrowly beat Davis in one national sprint and was beaten by Davis by an inch in the 200 meters in a near record 20.4.

In team competition, the Olympic Club of San Francisco, won the outdoor national title and the New York A.A. the indoor. Southern California again won the N.C.A.A. honors, with N.Y.U. taking the I.C.A.A.A. outdoor title and Fordham University taking the indoor title for the first time. Indiana University was top in the Big Ten meets.

CASWELL ADAMS.

TRADE. See BUSINESS REVIEW; MARKETING, TRADE, FOREIGN; the sections on *Foreign Trade* under the various countries and on *Trade* under the States.

TRADE, FOREIGN. Publication of figures on the foreign commerce of the United States was suspended upon America's formal entrance into the World War. Consequently trade statistics for the calendar year of 1941 are not publicly available. However the Department of Commerce, in the *Foreign Commerce Weekly* of Nov. 22, 1941, presented a full summary of U.S. trade during the first two years of the war. The tables that follow were abstracted therefrom.

Table I has particular interest because it covers the ups and downs, violent in many cases, of the yearly totals of the U.S. exports and imports of each of the more important commodities during each of the two years that followed the outbreak of war on Sept. 1, 1939. The corresponding totals for the year ended with Aug. 31, 1939, which are included, present the last prewar year as a means for comparison of the later totals. Thus come to view such changes as the long decline in the U.S. exports of tobacco, the sharp drop in those of raw cotton during 1941, the rise in 1941 of the exportation of aircraft to almost exactly double the total by value for 1940, and the still sharper, though less substantial, jump in the shipment of firearms and ammunition. In the imports may be traced the beginning of American purchase of ores of tin with a view to extracting the metal from such ores for the first time on a large scale in this country; the rapid passage of the United States from the position of an exporter, on balance, of copper to that of a heavy importer of this metal; and the extent of the stabilization of the Latin-American coffee trade.

Table II illustrates more fully the cases of a few particularly significant commodities, by showing, in percentage, each one's part of each year's total of exports or imports and furthermore each one's excess or decline, for 1941, over its total for 1940 and 1939.

The relocation of U.S. foreign trade, in its general lines, appears in table III, presenting the shifts to and from pertinent general groupings of commodities and likewise of countries. Table IV (p. 660) shows the totals (years ended Aug. 31, 1940 and 1941) of U.S. trade with each of the more important commercial nations; here may be observed

the extent of the interruption of trade with Italy, Germany, Japan, and the many lands under their control, and likewise the course of business with the still-free countries of Europe—Sweden and Switzerland. As to Russia, the rise of U.S. exports subsequent to the start of that country's war with Germany came too late to appear conspicuous in the totals for the year ended Aug. 31, 1941.

It deserves note that the yearly trade of the U.S. with the British Empire and Egypt, as an aggregate, more than doubled as to exports, if the year ended Aug. 31, 1941, be compared with the average for the corresponding years 1937-39; as to imports, it rose by 45 per cent. A comparison of figures will show that, while exports to this group of countries ran not quite to \$1.48 for every \$1 of corresponding imports (1937-39) they exceeded \$2 for every \$1 of such imports for 1941.

Nonagricultural.	1,196	1,251	1,385	49.5	49.4	47.5	+16	+11

The same totals showed that the exports to the group advanced from 41.9 per cent of all U.S. exports (1937-39) to 65.9 per cent (1941), while corresponding imports advanced only from 35.8 per cent (1937-39) to 45 per cent (1941) of all U.S. yearly imports. The American republics as a whole more nearly balanced their trade with the United States in the respects considered above; notably, they sent more in 1941 than they took.

TRANS-JORDAN. An Arab territory in Asia Minor, bounded by Syria, Iraq, Saudi Arabia, and Palestine. With Palestine, it was mandated to Great Britain by the League of Nations, Sept. 29, 1923. Area,

34,740 square miles; estimated population, about 300,000 (260,000 Arab Moslems, 30,000 Arab Christians, 10,000 Circassians and others). Chief towns: Amman (capital), Es-Salt. Arabic is the official language. Schools in 1938-39 numbered 191 with 13,854 pupils.

Defense. The defense force in 1941 included Royal Air Force units based at Amman and Maän; the Trans-Jordan Frontier Force of 700 natives with British officers; and an Arab Legion of 47 officers and 1,577 men, led by Col. John B. Glubb, an Englishman. Local Arab tribal levies were available in time of emergency.

Production, etc. East of the Hejaz Railway the country is largely desert, but fertile land suitable for agriculture lies to the west. Stock raising and primitive agriculture are the principal occupations. Some tobacco is grown. Phosphate deposits have been developed and potash is recovered from the Dead Sea. The country's limited trade is mainly with Palestine and Iraq. There is a surfaced automobile highway from Jerusalem to Amman. Dirt roads raised the total mileage suitable to motor traffic in 1938 to 1,250. In 1941 a surfaced highway was completed from Baghdad to Haifa, Palestine; it crosses Trans-Jordan alongside the Iraq Pe-

troleum Company's pipeline. The Hejaz Railway, crossing the country from north to south, was open to traffic only as far south as Maán. Air lines from Cairo, Egypt, and Lydda, Palestine, to Baghdad cross Trans-Jordan. Government revenue (1939-40), 513,971 Palestine pounds, including a grant-in-aid from the British Government; expenditure, £P510,293; public debt (Dec. 31, 1939), £P155,107.

Government. Conquered by the Ottoman Empire by the British in the World War, Trans-Jordan was placed under the rule of the Hashimite prince, Emir Abdullah ibn Hussein in April, 1921. He is assisted by a Council of Ministers, established Aug. 6, 1939. A Legislative Assembly of 16 elected and 6 ex officio members was established in 1929. A treaty recognizing Trans-Jordan's right to an independent government but placing it under British protection was signed Feb. 20, 1928. The British High Commissioner for Palestine is also High Commissioner for Trans-Jordan. He is represented at Amman by a British Resident (A. S. Kirkbride, appointed Feb. 16, 1939).

History. The Emir Abdullah again displayed his loyalty to the British in 1941 during the armed struggles that drove Axis influence out of both Iraq and Syria. Following Rashid Ali Al-Gailani's coup in Iraq (q.v.), the deposed Regent, Abdul Ilah, took refuge with his uncle, Emir Abdullah, in Amman. The Trans-Jordan Arab Legion fought with

the British in the subsequent drive to oust Rashid Ali. Abdullah also organized a tribal force to aid in the campaign. Iraqi sources on May 19 claimed that their irregular forces had invaded Trans-Jordan under the anti-British Arab leader, Fawzi el Kaoujji. Apparently guerrilla fighting took place along the road and oil pipe line in northern Trans-Jordan in connection with the British capture of Rutbah Wells in western Iraq. On June 4 the Arab Legion was reviewed by Emir Abdullah in Amman upon its return from the successful operations in Iraq.

Two days later French planes from Syria were reported to have bombed Amman. Trans-Jordan served as base for some of the Allied columns that on June 8 launched the invasion of Syria and Lebanon (q.v.). In recognition of his cooperation, the British early in the year appointed the Emir an air commodore in the Royal Air Force.

See ARABIA under *History*; WORLD WAR.

TRANSPORTATION. See AERONAUTICS; DEFENSE TRANSPORTATION, OFFICE OF; EXPORT-IMPORT BANK; MOTOR VEHICLES; PETROLEUM COORDINATOR FOR NATIONAL DEFENSE; PORTS AND HARBORS; RAILWAYS; RAPID TRANSIT; ROADS AND STREETS, SHIPPING, TRANSPORTATION DIVISION; WATERWAYS, INLAND; also sections on *Transportation* under countries and States.

TRANSPORTATION DIVISION. On May 28, 1940, President Roosevelt appointed the seven-member Advisory Commission to the Council of National Defense, and named Ralph Budd as Commissioner of Transportation. [Since that time the activities of the Advisory Commission have been transferred to other agencies, the Transportation Division being superseded by the Office of Defense Transportation (q.v.) under the Office for Emergency Management on Jan. 2, 1942.] Mr. Budd's central task was to have available an adequate supply of transportation. Such matters as rates and charges, labor relations, and the routing of traffic were left to existing agencies designated by statute to handle them.

The Transportation Commissioner did not set up a large force but, in the interests of efficiency and economy, called upon many existing organizations, both public and private. The Association of American Railroads, among other things, furnished statistics of carloadings, car and locomotive supply, fuel and store stocks. Managers of Port Traffic reported the freight car situation at each port, and the Car Service Division made a weekly check of all industries. This latter division had authority to embargo any civilian industry not promptly releasing railroad equipment. The Bureau of Service of the Interstate Commerce Commission assisted in locating misuse of equipment and shipper complaints. The Commissioner also had at his disposal a Tank Car Service Committee and a consultant for the Short Line railroads. The Great Lakes carriers, the barge lines, the pipe lines, and the air lines were also represented on the staff of the Transportation Commissioner. In regard to highway operations, the Transportation Commissioner was advised by a Central Motor Transportation Committee which had 16 district committees on which for-hire truckers, bus operators, and the public were represented. The Work Projects Administration, the Public Roads Administration, and the various State Motor Vehicle authorities made available their services. To facilitate contact with government agencies, there were designated liaison officers.

From the beginning, the Transportation Division engaged in a constant study of railroad traffic demand, present and prospective. In July, 1940, the

Commissioner recommended that the railroad ownership of freight cars be increased to 1,700,000. This program was adopted, but because of material shortages, it was 24,370 cars short on Oct. 1, 1941. A further program was adopted early in 1941 calling for a total of 1,800,000 cars by Oct. 1, 1942. This called for the building of about 154,000 new cars during the twelve months October to October. At the end of the year the program was falling behind by about one half or 7,000 cars a month, because of shortage of material. Difficulty in obtaining materials also prevailed as to locomotive building, and in a lesser degree to maintenance and improvement of roadways and structures.

The Transportation Commissioner urged upon shippers and carriers that full use be made of existing units and that cars and locomotives be kept in serviceable condition. On Oct. 1, 1939, the bad order per cent of all freight cars was 12.1. A year later it was 8.1 per cent and on Oct. 1, 1941, 4.1 per cent, an all-time low record. Since shippers have control of loaded freight cars approximately half of the time, they were appealed to to load and unload cars promptly, and to load them to capacity. Largely as a result of shipper cooperation, the average movement per car per day rose from 35.3 miles in August, 1940, to the new record high of 44.1 miles just one year later.

In May, 1941, users of coal were called upon to build up their stocks. On Sept. 1, 1941, railroad fuel supply amounted to 8,017,000 tons, an increase of 2,363,000 tons over the corresponding period in 1940. The Commissioner arranged for the formation of a Tank Car Service Committee to find out currently to what extent petroleum and its products could be handled by existing railroad equipment.

In view of a threatened shortage of passenger equipment resulting from growing troop movements, the railroads were urged to increase their standby of passenger cars by discontinuing trains which can be abandoned. The Transportation Commissioner addressed a letter to the Public Utilities commissions of each state outlining the necessity for this program; all interested parties responded to this suggestion.

The Transportation Commissioner was instrumental in planning a survey of all trucks and buses available in the country, the actual work to be done by the Public Roads Administration, the WPA, and the various State Motor Vehicle departments. There were critical shortages in materials for building and repairing buses and street cars, and the Transportation Division backed the effort to increase these particular forms of transport. In the meantime, municipal authorities and business concerns were urged to enforce traffic rules and stagger the opening and closing hours of mills and offices. Working with the assistance of the Public Roads Administration and the WPA, the Transportation Division also attempted to relieve congested highway conditions existing at industrial plants working on defense materials. Many surveys were made indicating the necessity for improved highways at plants all over the country.

To insure the maximum movement of iron ore through the Great Lakes, the Transportation Division arranged for a large ice-breaker to assist in opening the season early and in keeping it open late. To the same end, new and larger ore steaming facilities were recommended and installed at Allouez, Wis. Legislation was sponsored which permitted the use of Canadian lake boats between United States ports, and arrangements were made for a higher load line thus allowing heavier cargoes.

The result was a seasonal movement during 1941 of 80,116,360 tons compared with the former high record of 65,204,600 tons set in 1929.

Through the consultant on inland water transportation, a complete survey was made showing the equipment available on the Mississippi-Ohio-Missouri River System, Intracoastal Canal, and Warrior River System. Barges and boats on rivers and canals handled more freight in 1941 than in any previous year.

There was substantial pipe line construction for petroleum and its products and for natural gas.

The consultant on warehousing maintained contact with all government agencies involved in the storage of materials, and upon request has assisted in the location of suitable facilities. The Transportation Division arranged for a complete census of all warehouses to show which can be used for storage purposes.

The Transportation Division cooperated with the Priorities Division in connection with transportation equipment of all kinds. Although blanket priorities were granted for material needed in new cars and locomotives and new buses and trucks, sufficient material was not made available in 1941 except for highway trucks which with automobiles are more numerous than ever before. All applications for Certificates of Necessity under Section 124 of the Internal Revenue Code which involve transportation agencies were referred to the Transportation Division for study and recommendation. The Division also participated in the work of the Off-Shore Shipping Priorities Committee of the Office of Production Management.

Frequent meetings were held with representatives of the Army Intelligence Staff, Naval Intelligence, and the Federal Bureau of Investigation looking toward protection of strategic rail and port facilities against possible sabotage.

RALPH BUDD.

TRANSVAAL. See SOUTH AFRICA, UNION OF.

TRAVEL. According to the *American Express Survey and Forecast of Travel* (January, 1942) the travel and recreation year of 1941 set new high records in this our third largest industry—an industry with a value variously estimated as ranging from five and a half to six billion dollars. Douglas Malcolm, in the report, pointed out that the travel, recreation, and resort industry now stands near the top as a source of income for a good many of our States. Catering to tourists is recognized as the leading business in New Hampshire, New Mexico, and Colorado. Maine reckons her tourist trade as second only to agriculture; California puts only the petroleum industry ahead of it, while to Florida it represents many times the value of the citrus fruit crop. Tourists are worth more to North Carolina than the cotton crop, and more to Louisiana than rice, sugar, and cotton combined.

Seven per cent of the national income is spent annually on travel and recreation. That a continuous and uninterrupted flow of travel is considered vital to national welfare is attested by the fact that 39 States appropriated nearly \$6,000,000 last year for State advertising to attract tourists. Florida topped the list with an appropriation of \$825,000. According to a recent statement by Gov. Ralph L. Carr, Colorado plans to double its State advertising campaign appropriation for 1942. Canada, Mexico, Cuba, and other nearby neighbors of the Western Hemisphere count heavily on our tourist dollars with which to balance budgets and pay interest on obligations to the United States.

While travel within the hemisphere increased, restrictions on travel to belligerent areas kept the total number of persons traveling abroad at a low level as compared with pre-war years. The number of passports issued or renewed by the Department of State for 1941—49,757—was less than half of the total for any year between 1920 and 1938, although it showed a considerable increase over the 1940 figure of 26,253.

TRENGGANU. See BRITISH MALAYA.

TRAIL SMELTER CASE. See CANADA under *History*.

TRINIDAD AND TOBAGO. A united British colony near the coast of Venezuela, comprising the islands of Trinidad (1,862 sq. mi.), Tobago (116 sq. mi.), and adjacent islands. Total area, 1,980 square miles. Total population (Jan. 1, 1940, estimate), 473,455, including 161,000 East Indians and some 5,000 Chinese. Chief towns: (on Trinidad) Port of Spain, the capital (91,200 inhabitants), San Fernando (15,858), Princes Town (5,580), Arima (5,612). The main towns on Tobago are Scarborough (1,515), Roxborough, and Plymouth. Vital statistics (1939): 14,525 births, 7,491 deaths, and 3,043 marriages. Education (1939): 293 schools for primary and intermediate education. The Queen's Royal College and its affiliated schools provide for higher education.

Production and Trade. Petroleum (2,844,000 met. tons, 1940), asphalt, cacao, sugar (120,000 met. tons, 1941), coconuts, coffee, timber, grapefruit, and bananas are the chief products. Natural asphalt is obtained from a pitch lake at La Brea. There are deposits of coal, iron, graphite, gold, and gypsum. The colony has 255 factories, exclusive of the sugar factories and oil refineries. Trade (1939): \$34,762,954 for imports and \$37,359,476 for exports (asphalt \$1,170,571, sugar \$5,087,030, cacao \$1,212,682, and petroleum were the main items). The principal imports were wearing apparel, manufactured goods, foodstuffs, and beverages. Roads (1940): 1,849 miles. A British air service linking Trinidad, Tobago, and Barbados was inaugurated during 1941.

Government. Finance (1940): Actual revenue, by reason of increased returns for customs and excise, exceeded estimated revenue by \$1,500,000, while expenditure exceeded estimated expenditure by \$500,000. The colony is governed under a reformed constitution which went into effect in 1941. A governor, assisted by an executive council, heads the administration. The first meeting of the legislative council under the new constitution was addressed by the governor on May 16, 1941. As now constituted the legislative council consists of the governor as president (with a casting vote in case of a tie), 3 official members, and 15 unofficial members (6 nominated by the governor and 9 elected by the

voters). Governor and Commander-in-Chief, Maj. Sir Robert Young (appointed June 20, 1938).

History. Differences between the government of Trinidad and United States officials over the location of the U.S. naval and military bases to be constructed in Trinidad under the Anglo-American agreement of Sept. 2, 1940, were ironed out early in 1941 (see YEAR BOOK for 1940, p. 744). Agreement on the sites originally selected by the U.S. military and naval experts was announced in Washington and London Jan. 11, 1941. Shortly afterward the Trinidad legislative council authorized the commencement of work on the bases, and actual construction started early in March.

Meanwhile the governor and a member of his executive council proceeded to London to assist in the negotiations that ended with the signing on Mar. 27, 1941, of the Anglo-American treaty concluding the deal of Sept. 2, 1940. Under a lease annexed to the treaty, and signed in Port of Spain, Trinidad, on April 22, the British Crown transferred to the United States government free of rent for 99 years the following pieces of property: (1) Approximately 12 square miles on the north shore of the Gulf of Paria, west of the village of St. Pierre around Entrada Point, Point Dalgada, and Point Gourde, including Gasparillo Island and the Five Islands; (2) about 18 square miles along the boundaries of the Guanapo, Guaico Valencia, and Cumuto Forest Reserves in the north central part of the island, but excluding the eastern main road and the right of way of the Trinidad government railway; (3) 2 square miles northeast of Longdenville, a town in west central Trinidad; and (4) about 96 acres on Saline Bay on the northeast coast, between the Saliboa and Primera Pria rivers.

The United States undertook the construction at the site west of St. Pierre of an important seaplane base and naval station, with facilities for berthing ships, a fleet anchorage, and limited repair facilities, all costing an estimated \$17,855,000. The United States was authorized to remove the quarantine station from Five Islands, upon payment of compensation; to establish defenses in the waters of the Gulf of Paria, on islands in the Dragon's Mouth, and on the mainland at the Serpent's Mouth (northern and southern entrances to the Gulf, respectively), with the proviso that such installations be returned to the Trinidad government should it decide to construct additional defenses of its own; to establish a U.S. fleet anchorage covering about 12 square miles in the Gulf of Paria; and to impound the waters of the Aripo river and construct the necessary dams and pipelines for the use of the United States forces on the island. The United States government also obtained a year's lease on 1,200 feet of wharfage at Port of Spain, and the right to construct 3,000 additional feet of wharfage there under a 99-year lease. It was stipulated that this lease might be voided if the Trinidad government erected satisfactory substitute facilities elsewhere. United States naval officials also planned to dredge the southern channel into the Gulf of Paria to provide two deep-water entrances in this almost landlocked body of water. The United States government agreed to compensate private property owners for expropriation and damage resulting from work on the bases. A detachment of U.S. Marines landed at Port of Spain on Mar. 23, 1941, and on March 31 the United States flag was raised over the naval base which was formally commissioned on Aug. 1, 1941, in the presence of high United States and British authorities. Work was under way during the year on the important United States army air base and military defense post in the center of the island.

The first unit of the United States garrison, comprising coast artillery, infantry, and other detachments, arrived at Port of Spain on May 5, 1941.

On June 11, 1941, the British Colonial Secretary said that owing to Trinidad's satisfactory financial position it was possible to proceed, within the limits imposed by war conditions, with the program of social and economic betterments inaugurated before the war. The governor appointed a representative franchise committee to make recommendations as to the desirability of extending the franchise for the election of members of the legislative council and of reducing substantially the margin between the qualifications for voting and for membership in the legislative, municipal, and county councils. The findings of this franchise committee were expected to be put into effect in time for the 1943 elections.

It was officially announced in Port of Spain that the British government would sign with Venezuela agreements defining their respective interests in the undersea areas of the Gulf of Paria and ceding to Venezuela the island of Patos, within three miles of the Venezuelan coast and long claimed by Venezuela (*Crown Colonist*, London, June, 1941; p. 290). During September, 1941, it was reported that in view of the serious labor shortage caused by the migration of workers to the United States bases under construction the Trinidad government had decided to relax the restrictions on immigration to permit surplus labor from Barbados and other West Indian islands to enter the colony for employment in agricultural occupations.

TUNGSTEN. The demand for tungsten in the manufacture of armaments in 1940 revealed the very strategic nature of this metal. Increasing demands for it in 1941 and the disruption of shipments from China via the Burma road added to the national concern over its procurement. China has always produced about 8,000 metric tons a year, almost the entire world supply. Imports from China, deflected through an Indo-China route, continued to be received throughout 1941, but at a startlingly diminished rate.

Tungsten is an invaluable metal used to strengthen steel and is consumed chiefly in the manufacture of tools for cutting metals. Electric light and radio tube filaments must be pure tungsten, but consumption for this purpose is not large. Its military uses are: cores in armor-piercing bullets, erosion-resistant liner in heavy ordnance, armor plates, and in gun breeches. As the United States military program grows, molybdenum is expected more and more to be substituted for tungsten in certain high speed steels.

The tungsten stockpile in the United States in December, 1941, was 7,000 tons. By that date United States output had almost reached the 8,000-ton mark, with production capacity to be expanded to a potential 23,000 tons for 1942. The 1942 demand for tungsten, however, was estimated by the OPM in November at 25,000 tons. And the nation looked to home for additional sources of supply to

make up the deficit. New high grade deposits of tungsten ore were discovered during the year in Idaho, which are being developed very rapidly. The United States possesses also deposits of low grade ores which are being worked under government subsidy. But the continued threat that hangs over Chinese imports spurred the government to seek and foster still other sources of supply, especially in South America. In November the United States contracted through the Metals Reserve Company for all of Argentina's tungsten for three years, up to a maximum of 3,000 tons a year of pure tungsten ore, at \$21 a short ton for concentrates of a specified quality. This step is of incalculable importance to the United States in view of the fact that it cuts off this source of supply from Axis consumption, and especially because it ousts Japan from the field, who had hitherto been the United States' chief rival in the South American market. Argentine production has normally been about 2,000 tons a year. The United States also contracted for Bolivia's total output, which has been about 4,000 tons a year. The sure United States market, however, is expected to raise these figures considerably. See GEOLOGICAL SURVEY; MINES, BUREAU OF.

TUNISIA. A French protectorate in North Africa. Capital, Tunis. With an area of 48,332 square miles, Tunisia had a population of 2,608,313 at the 1936 census, including 2,335,623 Arabs and Bedouins, 59,485 native Jews, 108,068 French citizens, 94,289 Italians, and 7,279 Maltese. The estimated civilian population on Jan. 1, 1939, was 2,700,000. Italian census figures published July 22, 1940, placed the number of Italians in Tunisia at 125,000. The 1936 census populations of the chief towns were: Tunis, 219,578; Sfax, 43,333; Sousse, 28,465; Bizerte, 25,872; Kairouan, 22,991. Moslems comprise 89.5 per cent of the total population. The school attendance on Dec. 31, 1937, was 96,520.

Production. The chief occupations are agriculture, stock raising, fishing, and mining. Yields of the chief crops in 1939 were (in metric tons): Wheat, 505,000; barley, 350,000; oats, 30,000; olive oil, 60,000, wine, 988,000 hectoliters (hectoliter equals 26.42 U.S. gal.). Cork production (1940) was 6,374 metric tons. Dates, nuts, henna, and citrus fruit are other products. The 1937 livestock estimates were 3,372,894 sheep, 507,302 cattle, 144,762 camels, 1,672,352 goats, 109,787 horses, 156,554 asses, and 56,615 mules. Output of the chief minerals in 1939 was (in metric tons): Phosphate rock, 1,608,045; iron ore, 764,731; lead ore, 28,280; pig lead, 23,403; mercury ore, 1,943; zinc ore, 903; fluor spar, 2,473. The principal native manufactures are woolen goods, carpets, leather goods, and pottery.

Foreign Trade. For the first six months of 1939 (publication of later statistics was suspended), imports amounted to 849,121,000 francs (699,477,000 for the same period of 1938) and exports to 752,408,000 francs (720,266,000). Trade is mainly with France. Wheat, olive oil, phosphates, and wine normally account for half the total exports.

Finance. Budget estimates for 1940 placed receipts at 811,198,000 francs and expenditures at 810,954,334. Public debt on Jan. 1, 1938, 1,009,593,000 francs (franc averaged \$0.0251 in 1939, \$0.0208 in 1940).

Transportation. With 1,123 miles of line, the Tunisian State railways in 1938 carried 2,153,587 metric tons of freight. Highways extended 7,887 miles in 1939. Civil airlines connect Tunis with Bône, Algiers, Oran, and Casablanca in French North Africa, with France and normally with Italy.

Government. Tunisia is a regency under the con-

trol of the French Foreign Office, which acts through a Resident-General who is also Minister of Foreign Affairs for Tunisia. There is a ministry of 11 departments (8 French and 3 Tunisian). The nominal ruler in 1941 was Sidi Ahmed Bey, who succeeded to the throne July 10, 1929.

History. The Vichy Government continued to maintain its control over Tunisia throughout 1941 as a result of the delicate balance of forces in warring Europe which made Hitler unwilling to grant Mussolini's demand for inclusion of the protectorate in the Italian African empire (see FRANCE, GERMANY, and ITALY under *History*). The German Government in May and Italy in June were reported to have pressed Marshal Pétain for concessions in Tunisia similar to those granted the Germans in Syria (q.v.). This pressure apparently was resisted, due to the opposition of Gen. Maxime Weygand, French pro-consul in North Africa, and of both native and French inhabitants. The British, however, suspected Tunisian authorities of facilitating shipments of German and Italian troops and arms to Libya through the British sea and air blockade. On May 28 British bombers, pursuing a Libya-bound Italian convoy, attacked the Tunisian port of Sfax, damaging port works and causing French and native casualties. The removal of General Weygand in November facilitated Axis infiltration in Tunisia.

Economic conditions remained difficult, increasing unrest among both natives and Free French sympathizers. The import trade remained virtually at a standstill. A number of factories were established to supply commodities previously imported. On March 18 all exports were made subject to license, following establishment of a special export license tax on January 25. Considerable quantities of foodstuffs were shipped to France during the year, but mining and other production was retarded by transportation and shipping difficulties.

TUNNELS. A number of major and minor works for hydraulic, highway, railway, and mining purposes have progressed steadily during 1941. The longest tunnel now under construction is the 85-mile bore of the new Delaware River water supply to New York City. On the pressure tunnel of the Boston water supply at Boston, Mass., shafts 260 ft. deep are being sunk for the extension to the Chestnut Hill reservoir. (See WATER WORKS)

Another long bore is the Continental Divide tunnel 13.10 miles long, on the Colorado-Big Thompson irrigation and power project of the U.S. Bureau of Reclamation. It pierces the continental divide of the Rocky Mountain range. Water pumped up to its western end from the Granby reservoir on the Colorado River (on the Pacific slope) will flow by gravity to the Thompson and South Platte rivers to irrigate lands on the eastern slope, in Colorado. Its method of construction is unusual in that the tunnel is driven from the ends only, with no intermediate shafts or headings. It is said to be the longest tunnel ever built in this way. The plan was adopted in order to avoid disfiguring the National Park above the tunnel by unsightly work at shafts or adits. But it lengthened the construction period, and also the difficulties of drainage and ventilation, while the concrete lining must wait until all excavation is finished, instead of following closely behind the excavation at certain points. While the tunnel is mainly in rock, some of this is broken and loose, so as to require steel lining to hold it until the concrete lining can be placed. It will be 9 ft. 9 in. in finished diameter. About 33 per cent of its length has been driven, and the tunnel is expected to be finished and lined by 1946.

During 1941 (fiscal year ending with June), the U.S. Bureau of Reclamation completed six tunnels, aggregating 53,128 ft. in length. These bring the number of the Bureau's tunnels to 367, with a total length of nearly 100 miles (516,713 ft.). Most of them are on irrigation aqueducts and canals for irrigation projects, but others pass around the ends of large dams, for the purpose of carrying the water of the river or stream during the construction of the dam, while in some cases they serve also to form a part of the spillway system which carries off the overflow from the reservoir. Some of these diversion tunnels are very large, 23 ft. or more in diameter.

At Chicago, two parallel tunnels, 16 ft. in diameter and each a mile in length, are being driven under the bed of Lake Michigan to connect the new South-Side filtration plant with intakes in deep water. Tunneling for the first unit of the new subway system at Chicago is practically completed.

Highway tunnels are required occasionally in modern construction through mountainous regions in order to secure favorable locations and to keep within prescribed limits of grades and curves, or in some cases to avoid dangerous open-air locations. This is notably the case in California, where a recent example is the introduction of two tunnels, 500 and 700 ft. long, on the Angeles Crest highway. Here two ridges which intercept the line of the road have faces so nearly vertical that open side-hill cuts around them were not practicable. The two tunnels are separated by only 100 ft. of fill across the intervening ravine. In section, they are arched, 35 ft. wide and 22 ft. 3 in. high.

Leading in subaqueous highway tunnels is the two-mile Battery-Brooklyn tunnel across the mouth of the East River in New York Harbor, which is now well under way, and is scheduled for completion in 1944. At its mid-length, where it passes under Governor's Island, there will be a shaft with ventilating plant. The shaft will also be used for construction, so that headings can be driven from it in both directions in order to meet those being driven from the shore ends. Traffic in the first (south) tube of the Lincoln Tunnel under the Hudson River, at New York, has become so heavy that work is to be resumed on the parallel (north) twin tunnel. This work was stopped two or three years ago, as the one tube was sufficient for the traffic at that time.

The 3,400-ft. Bankhead tunnel carrying a highway tunnel under the river at Mobile, Ala., was opened to traffic early in 1941. A project for a much longer tunnel under the Delaware River, to connect Philadelphia, Pa., and Wilmington, Del., had to be abandoned, as under the war emergency the government refused to grant priority release for the materials needed. However, this \$19,000,000 project is to be included in the program of public-works for postwar construction. A highway tunnel under the Panama Canal, near its Pacific end, has been proposed, owing to the heavy traffic concentrated at a ferry crossing. The tunnel plan was adopted as preferable to a bridge.

Most of the tunnels being built for railway purposes are on diversion or relocated lines replacing original lines that will be submerged in reservoirs created by some of the numerous large dams now under construction. A line improvement on the Chesapeake & Ohio Railroad, however, includes a new single-track tunnel 4,200 ft. long through the Blue Ridge mountains between Afton and Waynesburg, Va. The original single-track tunnel, now 83 years old, is practically paralleled by the new bore, but is of such small section as to restrict the operation of the large modern locomotives and rolling-

stock. It was considered more convenient and economical to build a new tunnel than to enlarge the old tunnel while carrying traffic. The tunnel will be of ample section to accommodate any equipment, and this will also give much better ventilation, with less discomfort for the train crews due to heat and smoke in the old tunnel. The new diversion line, with the tunnel and its approaches, will also have somewhat better grades and alignment.

Two notable mining tunnels were completed in 1941. The Carlton Tunnel, in Colorado, provides drainage for the flooded low-level workings of gold mines in the Cripple Creek district, thus enabling the mines to resume work and extend the workings to greater areas and depths. It is six miles long, and 10 x 11 ft. in section. Tunneling was begun in July, 1939, and completed in July, 1941, although it had been expected to last until 1943. Small branch drifts are to be driven along fissures and under the mines to expedite the flow of water. The Elton tunnel, in Utah, serves the double purpose of drainage of mine workings 2,500 ft underground and also the transportation of ore from the mines at Bingham to a smelter plant at Tooele. It is 24,142 ft. long, 10½ ft. wide and 11½ ft. high inside the timber lining. Work was begun in March, 1937, and completed in July, 1941. See DAMS; RAPID TRANSIT.

E. E. RUSSELL TRATMAN.

TUOLENE. See CHEMISTRY, INDUSTRIAL.

TURF. See RACING.

TURKEY. A republic comprising parts of Asia Minor and the Balkan peninsula as well as Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara (Angora).

Area and Population. The area, including the Sanjak of Alexandretta (Hatay) but excluding 452 square miles of marshes and 3,256 square miles of lakes, is 296,346 square miles (13,012 in Europe and 283,334 in Asia). The Sanjak of Alexandretta (area, 1,930 square miles; pop., about 228,000) was ceded to Turkey by France on June 23, 1939. The population of Turkey at the census of Oct. 20, 1940, was 17,869,901 (16,158,018 at the 1935 census). Populations of the chief cities in 1940 were: Istanbul, 789,346; Izmir (Smyrna), 184,362; Ankara (Angora), 155,544; Seyhan (Adana), 89,990; Bursa (Brusa), 77,348; Eskisehir, 60,514; Gaziantep, 57,314; Konya, 56,698; Kayseri, 53,908.

Defense. Military service is compulsory. The active strength of the Turkish army before the outbreak of the European War was about 180,000 men. All trained reserves were mobilized during 1939 and 1940. As of Jan. 1, 1941, an estimated 800,000 troops, excluding the air force of 3,500, were under arms. The air force in 1940 had about 370 first-line and 500 second-line planes. The navy in 1941 consisted of the rebuilt German battle cruiser *Goeben* (Turkish name, *Yavuz*) of 23,100 tons, 2 old but modernized cruisers, 4 destroyers, 9 submarines, 2 gunboats, 3 minesweepers, and various auxiliary craft.

Education and Religion. Illiteracy was estimated at 55 per cent of the adult population in 1935, but only 2,517,878 were literate in the Latin alphabet, introduced in 1928. Students enrolled in 1938-39: Primary, 813,532; secondary, 84,355; lycées, 24,582; normal schools, 3,259; professional schools, 8,335; universities and other institutions of higher learning, 10,390. At the census of 1935 there were 15,838,673 Moslems, 125,046 Orthodox Christians, 78,730 Jews, 32,155 Roman Catholics, 44,526 Gregorians, 11,229 Armenians, 8,586 Protestants, and 12,967 others. There is no state religion.

Production. Agriculture supports four-fifths of the population. Production of the chief crops in 1940 was (in metric tons): Wheat, 4,105,000; barley, 2,255,000, corn, 758,000; rye, 483,000; oats, 327,000; tobacco, 67,700; beet sugar, 94,500 in 1939-40; rice, 49,304, potatoes, 260,026; cotton, 219,398. The 1940 wool clip was 33,295 metric tons; mohair clip, 7,721. Livestock statistics on Jan. 1, 1941: 25,299,730 sheep, 9,395,303 cattle, 946,873 horses, 925,486 buffaloes, 1,387,204 asses, 11,185,457 ordinary goats, 5,236,691 mohair goats, 193,290 camels, 73,822 mules. The 1940 mineral output was (in metric tons): Coal, 3,006,000; lignite, 149,150; copper ingots, 8,731; chrome ore, 110,038; iron ore, 130,344; and for other minerals in 1939: Boracite, 14,699; zinc, 14,424; silver-lead, 10,392; emery, 9,528; zinc-lead, 8,007; fuller's earth, 7,221; manganese, 3,339; antimony, 1,270; mercury, 359; magnesite, 493. The 1940 industrial production included (metric tons): Cotton yarn, 27,433; woolen yarn, 8,429; paper, 9,540; cement, 266,637; glass, 7,353. A government-sponsored industrialization program inaugurated in 1934 resulted in the establishment of numerous factories, including steel, textile, paper and flour mills; glass, soap, and chemical factories; sugar refineries; cement and canning plants; olive-oil presses and refineries; leather tanneries, hydro-electric plants, etc.

Foreign Trade. Imports in 1940 were valued at 68,922,700 Turkish pounds (£ T118,248,934 in 1939); exports, £ T111,446,500 (£ T127,388,997 in 1939). Imports in 1940 came principally from Italy, £ T11,224,300; Rumania, £ T10,806,000; United Kingdom, £ T9,665,300; Germany, £ T8,083,000; United States, £ T7,446,900. Of the 1940 exports, Italy took £ T17,951,300; United States, £ T15,738,740; Rumania, £ T11,987,200; United Kingdom, £ T11,550,900; Germany, £ T9,686,500. Leading 1940 exports were: Leaf tobacco, £ T24,222,000; raw cotton, £ T8,129,000; shelled filberts, £ T6,599,000; unwashed mohair, £ T6,582,000; olive oil, £ T6,070,000. See TRADE, FOREIGN.

Finance. The ordinary budget for 1941-42 (June 1 to May 31) anticipated revenues of £ T309,743,001 (£ T268,481,000 in 1940-41) and expenditures of £ T309,740,396 (£ T268,476,321 in 1940-41). Ordinary defense appropriations were £ T77,995,000 in 1940-41 and the same in 1941-42. Extraordinary defense costs, covered mainly by increases in note circulation, amounted to £ T190,913,534 in 1940-41. Notes in circulation totaled £ T281,000,000 on Dec. 31, 1939, and £ T490,000,000 on July 31, 1941. Average exchange value of the Turkish pound was \$0.8024 in 1939, \$0.725 in 1940.

Transportation. As of Dec. 31, 1940, railway lines extended 4,619 miles, of which all except 270 miles were state-owned and operated. A law of June 3, 1941, authorized extension of railway lines from Diyarbakir and Elazig stations to the frontiers of Iraq and Iran. During the fiscal year 1939-40, the state lines carried 25,636,009 passengers and reported earnings of £ T43,882,390. Highways extended 25,274 miles in 1940 (see ROADS AND STREETS). During the summer months of 1941 there was a daily air service between Ankara and Istanbul; no foreign airlines entered the country. Istanbul handled 76.1 per cent of the country's imports and 35.9 per cent of the exports in 1939. Vessels calling at Istanbul and in transit during 1940 numbered 18,247 of 7,523,233 tons, against 20,556 ships of 10,030,581 tons in 1939.

Government. The Constitution of Jan. 20, 1921, as amended in 1924 and 1934, vests executive and legislative power in the Grand National Assembly,

consisting of 424 deputies elected for four years by universal male and female suffrage. The Assembly exercises executive power through the President, elected for four years by the Assembly, and through the Council of Ministers, chosen by the President. In practice the President wields dictatorial powers. President in 1941, Gen. Ismet Inonu, who was elected to succeed President Kemal Ataturk on Nov. 11, 1938, and reelected Apr. 3, 1939. The People's party, the only legal political organization, in December, 1938, elected President Inonu as President General of the party for life. The Cabinet appointed Jan. 25, 1939, and reorganized Apr. 4, 1939, was headed by Dr. Refik Saydam as Premier.

HISTORY

The condition of the people of Turkey in 1941 was economically fair and politically quiet. Internal trade, under thoroughgoing governmental control, was preserved from the disorder with which the dislocation of imports and exports, by reason of war in Europe, threatened it. Foreign trade, impaired with regard to lands overseas, increased, as to exports especially, through shipments overland. The maintenance of four times as great an army as normal helped to swell the budget beyond the means of the public revenue, thus giving the Government moderate financial worries. Tense foreign relations overshadowed all these other national concerns. See map on page 291.

Turkey had at the outset of 1941 six neighbors adjacent to it on land. All six were invaded and occupied in whole or in part, in the course of the year: three—Greece, Bulgaria, and Russia—by Germany and her allies; the other three—Syria, Iraq, and Iran—by British and allied forces. The immunity of Turkey somewhat resembled that of the bullseye of a target completely rimmed with bullet holes. It differed in that Turkey owed its escape from invasion in part to its own Government's efforts, as well as in great part to luck. The Turkish foreign policy managed, thanks to both in combination, to maintain good relations with Germany and at the same time to keep in effect something of the Turkish alliance of 1939 with Great Britain.

General Aspects of Turkey's Foreign Relations. By the end of spring the German and allied forces controlled Bulgaria and Greece, thus toeing the whole Turkish European border. The downfall of the last members of the Balkan family of nations left Turkey without hope of an ally close at hand in the event of invasion of her own soil. It shook confidence in the power of Great Britain to protect Turkey, since British military aid to Greece had failed.

A considerable part of the normal Turkish exports had gone by sea to Great Britain. The agreement of 1939 with Great Britain had provided for Turkey's receiving from that country a quantity of material necessary to its defense. The course of the war in 1940 and 1941 rendered it impracticable, first, to ship from England the promised military material and, later, even to move Turkish goods to Great Britain in the usual quantities. On the other hand German possession of the railways communicating with Turkey by the European mainland assured a ready absorption in Germany of a variety of goods meeting German needs. Economic considerations thus pressed the Turkish Government to deal freely with Germany, despite the danger inherent in Nazi economic penetration.

In the earlier part of 1941 Turkish misgivings had to do not alone with Germany but also with Russia, these two being still at peace under the agreement of 1939. By the middle of the year, the

German invasion of Russia removed the risk of a Russian or Russo-German attack, though it cost Turkey her extensive trade with Russia over the Black Sea.

Dealings with the Axis. The first phase of Turkish dealings with Germany and her satellites developed in February. Germany's position in Bulgaria was then rapidly maturing into full control of that land and its Government. Turkey at this moment, on February 17, issued jointly with Bulgaria a declaration that neither of the two would commit aggression against the other. The purpose of Turkey's part in this declaration was variously interpreted. The Turkish journal *Vakit* called it the possible "cornerstone of a new Balkan entente." Others of the Turkish press denied that it conflicted with the Turco-British agreement, and declared it likely to assure peace in the Balkans. In some quarters outside Turkey it was thought to carry a notification to Germany that Turkey would acquiesce in German occupation of Bulgaria and would abstain from any British effort against that step. It was promptly followed by Germany's taking possession.

Greece next came under German attack. It had held against Italian invasion for six months. German forces prepared in the spring to make an end of Greek resistance. Great Britain, having to some degree recovered from reverses of 1940, sent an army to help Greek defense. Turkey had to decide whether to join in this defense or face the prospect of entire German domination on her European border. The question involved military judgment: the active army was strong in numbers but lacking in airplanes and other equipment proper to the warfare of the day. The alliance with Great Britain had stipulated that the British provide such equipment, and the Turkish Government, in the other party's apparent failure to perform this obligation, might regard itself as not bound to help in the British military operation. German diplomacy was reported, as early as March, to be working hard to dissuade Turkey from sending her soldiers into Greece. It was asserted also that German help was given or offered to Tashmak, an Armenian nationalistic society that might be able to disturb Turkish internal peace. The sudden and thorough success of Germany's military move against the Greek and British forces in May settled matters, leaving no chance for a belated Turkish entry, even had Turkey meant to wait and see how the opponents were matched.

With the conquest of Yugoslavia and Greece, a German drive across Turkey to the Suez Canal and the oil fields of the Middle East was generally expected. Consequently the Turkish Government quickly accepted a German offer of a ten-year non-aggression treaty. It was signed in Ankara June 18 and ratified by both parties soon afterward. On June 22 Hitler launched his surprise invasion of Russia. It then became clear that the nonaggression treaty was designed to safeguard Germany's southern flank during the Russian campaign. This treaty, providing for mutual consultation on controversial issues, appeared at variance with the Anglo-Turkish alliance, notwithstanding a prefatory clause safeguarding Turkey's existing contractual obligations.

At the instance of the German Ambassador, negotiations for a new commercial treaty started in June. The resulting treaty was not executed until October 9, after many weeks of bargaining. It turned out that Germany wanted, above all, some of the chromite ore that Turkey was exporting, under an agreement of 1939, to Great Britain. Turkey wanted military material to fill the need left by

the nonfulfilment of the bargain with Great Britain. Eventually Turkey undertook to deliver to Germany 90,000 tons of chromite ore in the years 1943-44, on condition that Germany should previously have delivered military material to the amount of 18,000,000 Turkish pounds. The treaty, carrying this arrangement, was signed October 9 and ratified in December. It provided for trade to the total of about 100,000,000 Turkish pounds on either side, in the period to end with Mar. 31, 1943. The delivery of chromium was deferred to the year following that date. The contract with Great Britain thus had time to expire without Turkish violation. Turkey was to send, in addition to chromite ore (23,000,000 Turkish pounds in all), foodstuffs and various minerals. Turkey also made agreements on trade with Hungary and with Switzerland.

Relations with Other Governments. Russia joined Turkey, March 24, in an exchange of declarations whereby each undertook not to attack the other in the event of the latter's becoming a belligerent. This gave some reassurance of Russia's not intending to join another power in a possible cooperative carving of Turkish territory. The later course of Russian affairs left the performance of the declaration entirely to Turkey, which remained scrupulously neutral between Russia and Germany.

Late in February the British Government made a particular effort to come to a clear understanding with Turkey on what to do about the threat brought to the Balkan states by the presence of the Germans in Bulgaria. Anthony Eden and Sir John Dill visited Ankara February 26-27 and discussed the situation with the Turkish President and the Foreign Minister. An official announcement said that the two governments had once more asserted their complete attachment to their alliance and had reached complete agreement on all problems discussed. In the outcome, however, Turkey did not appear at Britain's side in Greece.

The British attack on the French Government of Syria in June received a mild degree of support from Turkey. French efforts to bring reinforcements for the Syrian defense through Turkish territory were forbidden, and small warships escaping from Alexandretta to Turkish waters were disarmed and their crews interned. On the other hand the British sinking of a French troopship loaded with soldiers, in the Turkish harbor of Adalia, caused the Turkish Government to protest to Great Britain at the infringement of neutral territory.

U.S. Supplies to Turkey. It was announced December 3 that President Roosevelt had declared the defense of Turkey vital to the United States and had directed the Administrator in charge of the grants of military aid to fill the needs of Turkey as fast as possible. The action of the President made regular the dispatch of armament; but goods of this sort had already been sent indirectly, according to report in the press.

Other Events. The National Assembly enacted additional taxes designed to help cover the deficit shown in the year's budget. Robert College and the American College for Girls, both at Istanbul, closed May 15, at the behest of the Turkish Government, reportedly for reasons connected with the war.

UGANDA. A British East African protectorate. Area, 93,981 square miles, including 13,680 square miles of water. Population (1940), 3,790,689, comprising 3,769,758 Africans, 18,725 Asiatics, and 2,206 Europeans. Education (1939): 292,097 pupils in schools of all kinds. There is a college at Makerere for higher education. Bantu languages are spoken by some 2,400,000 of the Africans. Chief towns: Entebbe (capital), Kampala, and Jinja.

Production and Trade. Cotton (375,000 bales estimated for 1941-42; 370,000 bales produced in 1940-41), cottonseed, coffee, sugar, hides, skins, salt, tin (346 long tons, 1939), gold (11,060 fine oz., 1940), and timber are the main products. There are large numbers of cattle, goats, and sheep. Uganda and Kenya are one administrative unit for customs purposes. Trade for 1940 (Kenya and Uganda combined), including bullion and specie: £9,552,000 for imports and £9,252,000 for exports. Roads (1940): 2,500 miles.

Government. Budget estimates (1941): £2,067,710 for revenue and £1,960,754 for expenditure. Revenue and expenditure for 1939 amounted to £1,717,927 and £2,259,576, respectively. Public debt (1939): £2,850,000. The governor, in carrying out the functions of government, is assisted by an executive council of 7 members and a legislative council of 6 official members and 4 nominated unofficial members. Governor and Commander-in-Chief, Sir Charles Dundas (appointed July 8, 1940).

History. In order to raise additional revenue for war purposes there have been increases in taxation affecting customs, excise, internal postage and telegrams, trading licenses, gasoline tax, income tax, nonnative poll tax, and cotton tax. Legislation was passed to enable an export tax to be imposed on any commodity which, because of the war, might obtain an abnormally high price in markets outside Kenya and Tanganyika. UNION ISLANDS (TOKELAU). See NEW ZEALAND under *Area and Population*.

UNION NOW. *Union Now* is the title of a book by Clarence K. Streit, which proposed that the more experienced democracies, in order to avoid war and to establish a lasting peace, join in a federal union based on the broad principles of the American Constitution and designed to grow gradually into a World United States. World sales, including distribution as a book dividend by the Book of the Month Club in August, 1941, have totalled more than 250,000 copies. The first public edition of *Union Now* in March, 1939, provoked immediate

widespread discussion and led to the formation of groups devoted to spreading the idea in Great Britain, France, Switzerland, the United States, Australia, South Africa, and some South American countries. The United States organization is Federal Union, Inc., 10 E. 40th St., New York.

In March, 1941, Mr. Streit brought out his second book *Union Now With Britain* to conform his proposal to wartime conditions. Hitler having reduced the original "nucleus democracies" from fifteen to seven, accordingly in July, 1940, Mr. Streit published a "Declaration of Interdependence" which revised the original proposal to include the seven free-remaining democracies. *Union Now With Britain* covers this revised proposal.

Various polls have presented the question of federal union to our citizens, the last of these during 1941 being published in December by the magazine *Fortune*. Its results showed a five-fold increase since a previous poll reported in August, also by *Fortune*. The figures revealed that about 30,000,000 adults of the United States favored "a union of democracies in all parts of the world to keep order after the war." Immediately after declaration of war on the United States by Japan, Germany, Italy, and their allies, Federal Union, Inc., again brought forth a petition tuning the Union Now proposal to our direct participation in the war.

At the close of 1941 there were over 8,000 dues-paying members and about 120 chapters in key cities throughout the country. The first national convention of members was held in Cleveland, Ohio, in a three-day session in June, and was represented by delegates from nearly all of the chapters. Resolutions on policy, economic aims, and other important directives were discussed and effected. The officers of Federal Union, Inc. include Clarence K. Streit, president, E. W. Baldof, director; A. J. G. Priest, acting chairman; Wm. Jay Schieffelin and John W. Nason, vice-chairmen; P. F. Brundage, secretary, and John Howard Ford, treasurer.

Similar, wholly independent organizations exist in Great Britain, Eire, Canada, Australia, New Zealand, Argentina, and the Union of South Africa.

UNION OF SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.). A State comprising the greater part of the former Russian Empire. Capital, Moscow.

Area and Population. The area as of Aug. 31, 1939, was about 8,200,000 square miles (73 per cent in Asia and 27 per cent in Europe). The census of Jan. 17, 1939, showed a population of 170,467,186 (88,802,205 females and 81,664,981 males), compared with 147,027,915 at the 1926 census. The urban population at the 1939 census was 55,909,-

AREAS INCORPORATED INTO THE USSR

	Date of annexation	Area, sq miles	Population, est Jan 1, 1940
Eastern Poland	Sept 28, 1939	75,000 ^a	12,500,000 ^{ab}
Finnish provinces	Mar 12, 1940	13,558	?
Rumanian provinces			
Bessarabia	June 28, 1940	17,151	3,200,000
Northern Bukovina	June 28, 1940	1,737	500,000
Lithuania ^a	Aug 3, 1940	22,964	2,925,000
Latvia	Aug 5, 1940	25,402	1,951,000
Estonia	Aug 7, 1940	18,359	1,122,000
Total		174,171	22,198,000

^a Taking into account the transfer of Vilna Territory (area, 2,570 sq. miles; pop. 457,000) to Lithuania by the Soviet-Lithuanian treaty of Oct 10, 1939. ^b Approximate. ^c The great bulk of the inhabitants of Finnish territories ceded to the U.S.S.R. (about 450,000) was evacuated to Finland

908; rural, 124,557,278. Following the outbreak of the European War on Sept. 1, 1939, the foregoing territories were annexed to the Soviet Union, only to be reconquered by German, Finnish, and Rumanian forces in 1941.

The newly acquired Polish territories were incorporated in the Ukrainian and White (Byelo) Russian Soviet Socialist Republics, Oct. 1-2, 1939. The Finnish provinces on Mar. 31, 1940, were joined to the Karelian S.S.R., which was then renamed the United Karelo-Finnish S.S.R. and raised to the status of a constituent republic of the U.S.S.R. The major part of Bessarabia was merged with the Moldavian Autonomous S.S.R. on Aug. 2, 1940, to form the constituent Moldavian S.S.R. The remainder of Bessarabia, together with Northern Bukovina, was incorporated in the Ukrainian S.S.R. Lithuania, Latvia, and Estonia were given the status of constituent republics upon annexation. The addition of these five new units raised the number of constituent republics of the Soviet Union from 11 to 16. These republics, with their capitals, areas, and populations (Soviet statistics), are given in the accompanying table.

USSR. CONSTITUENT REPUBLICS

States	Capitals	Sq kilo-meters	Populations 1939
Russian S F S R	Moscow	16,610,500	109,278,614
White (Byelo) Russian S S R	Minsk	234,800	10,300,000
Ukrainian S S R	Kiev	533,300	38,900,000

Tula	155,005	272,403	175.7
Minsk	131,803	238,772	181.2
Vladivostok	107,980	206,432	191.2
Stalinsk	3,894	169,538	4,353.8
Kirov	62,097	143,181	230.6

Education. During the two decades ending in 1937, illiteracy was reported to have declined from 67.7 per cent to less than 8 per cent. In the academic year 1940-41, pupils attending elementary

and secondary schools numbered about 36,765,000. There were about 1,200,000 students in technical schools and workers' faculties; about 1,800,000 children in nurseries and kindergartens, exclusive of 5,700,000 children placed in collective farm nurseries and kindergartens during harvest season; and 550,000 or more students in 781 universities and colleges.

Production, etc. In the Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized, with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer cooperatives. Industrial production is carried on largely by State enterprises, operating under the general direction of appropriate Commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An Economic Council acts as a coordinative body. An organization in the Commissariat of State Control checks and supervises results.

State planning is an essential of Soviet economy. The planning system is designed to direct and coordinate the employment of the energies and resources of the country for orderly development. The planning system, however, goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship. Beginning in 1939, the Soviet Government withheld publication of detailed information on industrial production, agriculture, and other phases of economic development.

Industry and Mining The value of production of large-scale industry in 1940 was reported at 110 billion rubles at prices of 1926-27, an increase of 11 per cent over 1939. Total industrial output was valued at 137 billion rubles. An output of 162 billions was planned for 1941. Newly developed industrial regions between the Volga and the Urals, in the Kuznetsk area of Siberia, around Novosibirsk on the Trans-Siberian Railway, and in Eastern Kazakhstan were adding their production in 1941 to the major industrial areas around Moscow, Leningrad, and the Ukraine. The output of the chief industries in 1938 was: Electric power, 132,600,000,000 kilowatt-hours; coal, 132,900,000 metric tons (164,600,000 tons, estimated, in 1940); peat, 26,450,700 metric tons; oil, 32,230,000 metric tons (29,700,000, estimated in 1940); pig iron, 14,600,000 metric tons; steel, 17,700,000 metric tons; cement, 5,696,000 metric tons; trucks, 184,000 units; tractors, 32,200 units; cotton cloth, 3,491,000,000 meters; woolen goods, 114,000,000 meters; footwear, 213,000,000 pairs; sugar, 2,500,000 metric tons. Average daily carloadings were 88,000 cars. Coke output in 1940 was estimated at 16,500,000 metric tons; aluminum, 73,000.

Agriculture. Since 1928 the structure of agriculture has been completely reorganized. The small, individual peasant holdings, averaging 12 to 14 acres, have in large measure given way to large-scale collective farms in which the peasants pool their acreage. (Each collective farm family, however, has its own garden plot and domestic farm animals.) This new set-up has made possible better organized methods of production with a high degree of mechanization. The transition was effected largely during the years 1929-33. In 1929 less than 4 per cent of the peasant households were represented in the collective farms; by Jan. 1, 1938, the percentage had risen to 93.5. There were 244,000 collective farms averaging about 1,200 acres in

1938. Some 800,000 peasant households still worked individual holdings. In addition, large State farms operated about 12 per cent of the sown area.

For 1940 the total area sown to crops was reported as 152,662,000 hectares; the harvest of grain, as 112,000,000 metric tons. For comparison with earlier years, see accompanying table.

SOWN AREA AND GRAIN HARVEST

	Area of all crops (hectares *)	Area of grain crops (hectares *)	Grain production (metric tons)
1913	105,000,000	94,400,000	80,100,000
1931	136,300,000	104,400,000	69,480,000
1936	133,800,000	102,400,000	82,700,000
1938	139,900,000	102,400,000	94,900,000

* Hectare equals 2.47 acres

Grain exports, in metric tons, averaged 10,553,000 annually for the years 1909-13 and were 2,080,000 in 1938. The sugar production in 1940 was reported at 4,160,000 cwt; tea, 23,500 tons; cotton, 4,300,000 bales in 1941; sugar beets, 1,899,870 tons in 1939, potatoes, 1,868,317 tons in 1939; flax, 546,000 tons in 1938.

The backbone of mechanization in Soviet agriculture is furnished by the machine and tractor stations, each of which serves collective farms within its area. These stations grew from 158 in 1930 to 6,350 in 1938. The number of tractors on farms increased from 66,332 in 1929 to an estimated 500,000 in 1940; the number of combines, from 45 in 1929 to 168,000 in 1940. Total income from labor and sales of the collective farms reached a peak of 19 billion rubles in 1939 and increased further in 1940.

Foreign Trade. Foreign commerce is a governmental monopoly exercised by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. In 1938, the last year for which trade figures were published, imports totaled 1,422,882,000 rubles and exports 1,331,927,000 rubles, nominally equivalent to \$261,757,000 and \$250,751,000, respectively, in U.S. currency. For preceding years' trade, see YEAR BOOK for 1940, p. 751. For United States trade with the Soviet Union in 1940 and 1941, see TRADE, FOREIGN.

Finance. In a country as highly socialized as the Soviet Union the growth of the budget reflects to a large extent the degree of economic progress. The first "firm" budget, that of 1924-25, balanced

SOVIET UNION BUDGET

[In millions of rubles]

Revenues	1940, actual (preliminary)	1941, proposed	Increase per cent
Turn-over tax	105,849	124,500	17.6
Deductions from profits	21,346	31,259	46.4
Social-insurance funds	9,153	9,998	9.2
Machine-tractor stations	2,007	2,603	29.7
State loans	11,397	13,230	16.1
Personal taxes and dues	9,443	12,451	31.9
Total revenues	178,080	216,161	21.4
Expenditures			
1. National economy	57,110	72,875	27.6
Industry	27,762	39,181	41.1
Agriculture	12,168	13,455	10.6
Transport and communications	4,664	6,576	41.0
2. Social-cultural measures	41,713	47,803	14.6
Education	22,682	26,612	17.3
Health protection	9,379	10,891	16.1
Social insurance	3,007	3,469	15.4
3. Commissariats for Defense and Navy	56,102	70,865	26.3
4. Judiciary and State Administration	6,752	7,142	5.8
5. Service on State loans	2,785	3,850	20.3
Total expenditures	173,259	215,373	24.3

at 1.4 billion rubles. Preliminary budget returns for 1940 and estimates for 1941 are shown in the table on page 669. The separate budgets of the Union republics in 1940 balanced at a total of 42,895,728,000 rubles.

National income of the U.S.S.R. for 1940 was reported at 125,500,000,000 stable rubles of 1928-27. The estimated total of Federal bond issues outstanding Aug. 1, 1940, was 39,800,000,000 rubles. The official exchange rate of the ruble, for foreign trade valuation purposes only, was 5.3 rubles equals \$1.00 (1 ruble equals \$0.1887).

Transportation. Railway mileage increased from 53,700 in 1937 to an estimated 62,000 miles on Jan. 1, 1941 (including lines in annexed territories). The Akolinsk-Kartaly line (527 miles), Volochaevka-Komsomolsk (236 miles), and three shorter lines were placed in operation during 1940. Freight turn-over in 1940 was 409,000,000,000 ton-kilometers. Highways extended 1,682,000 miles in 1940 (see **ROADS AND STREETS**). Some 65,826 miles of inland waterways are navigable. In 1940 they handled 36,000,000,000 ton-kilometers of freight. Two important new lines, Moscow-Irkutsk and Moscow to Alma-Ata, were added to the civil air network in 1940. The merchant marine on July 1, 1939, comprised 716 vessels of 1,315,766 gross tons.

Government. Under the Constitution of 1936 supreme political power is vested in the Supreme Soviet of the U.S.S.R., meeting twice a year, and elected for a period of four years by universal direct suffrage and with secret ballot. The Communist Party, however, is the only legal political party and all candidates for elective office must have its approval. The Supreme Soviet consists of two legislative chambers with equal rights. The two chambers in joint session elect a Presidium of the Supreme Soviet consisting in 1941 of 42 members (including a president, 16 vice-presidents, a secretary, and 24 others) with wide administrative powers between sessions of the Supreme Soviet, including ratification of treaties and declaration of a state of war. The Presidium supervises the work of the Council of the People's Commissars, selected by the Supreme Soviet, which acts as the executive and administrative organ of the State. Joseph Stalin, general secretary of the Russian Communist Party and member of the Presidium of the Supreme Soviet and of the Supreme Military Council, exercised dictatorial powers. He became Premier, or chairman of the All-Union Council of People's Commissars, in 1941 (see *History* below).

HISTORY

The Soviet Government's efforts to keep Russia neutral while the capitalist powers exhausted themselves through armed strife ended in failure in 1941. On the morning of June 22 the German armies, aided by Finnish, Rumanian, Hungarian, and Slovak forces, launched a surprise invasion of the Soviet Union along the entire western frontier from the Arctic to the Black Seas. The invasion presented the Red Army and the Communist political system with a supreme test. By the end of 1941, both the military and politico-economic organizations of Soviet Russia, despite tremendous losses and damage, had withstood the Axis onslaught far better than the outside world had anticipated. See **WORLD WAR** for a complete account of military developments.

Diplomatic Prelude. The Nazi-Communist death struggle that drenched the plains of Western Russia with the blood of millions was preceded during the first half of 1941 by an increasingly acute diplomatic and propaganda conflict, waged by both

sides behind a mask of mutual friendship. German-Soviet collaboration, initiated by the Hitler-Stalin pact of Aug. 23, 1939, first began to wear thin after Hitler's guarantee to Rumania in the summer of 1940 blocked further Soviet territorial expansion in the Balkans (see **YEAR BOOK** for 1940, p. 752 f.). After German troops entered Rumania, Moscow employed the Communist International and every device of diplomacy short of open opposition to block the further expansion of German influence in the Balkans. Berlin, on the other hand, covertly encouraged the Finns to stand out against persistent Soviet efforts at annexation. Since Stalin was not prepared openly to challenge Hitler's ambitions in these two areas of conflict, the latter emerged victorious in both the Balkans and in Finland. Having conquered the Balkans and reached an understanding with Finland, Hitler was then in a position to attack Russia without serious danger of outside interference except for British air attacks upon western Germany.

While the nonmilitary phase of the Russo-German struggle was in process in the Balkans and Finland, the two Governments and their efficient propaganda organizations continued to collaborate against the democracies in other parts of the world (see **COMMUNISM AND FASCISM**). Five new Nazi-Soviet accords were signed Jan. 10, 1941, including an economic treaty expanding the trade pacts of Aug. 23, 1939, and Feb. 11, 1940. An exchange of goods valued at over \$400,000,000 for the period ended Aug. 1, 1942, was provided for with Russia delivering raw materials, oil products, and foodstuffs in return for German industrial equipment. The other agreements fixed the new German-Russian frontier and settled problems arising from the Soviet occupation of the Baltic States and the transfer of their German-speaking inhabitants to German-controlled territories.

At the same time the Soviet Union assisted Germany to weaken the British economic blockade by concluding trade agreements or opening commercial negotiations with Finland, Sweden, Norway, Slovakia, Hungary, and Belgium. Until Bulgaria capitulated to German pressure (see **BULGARIA** under *History*), relations between Moscow and the Axis capitals seemed increasingly close, while Russian relations with London and Washington cooled noticeably. But with Bulgaria's adherence to the Axis and the entrance of German troops on March 2, Moscow displayed its chagrin by openly denouncing King Boris's action on March 3 as likely to lead to an extension of the war. In his negotiations with Bulgaria, Hitler had ignored the provision of the German-Russian nonaggression pact calling for consultation on matters of joint interest. Yet the Soviet Government made no direct protest to Berlin.

When German pressure was concentrated upon Yugoslavia, Moscow took bolder steps to indicate its alarm and opposition. On March 24, the day before the Cvetkovich Government in Belgrade adhered to the Axis, Russia exchanged pledges of nonaggression with Turkey. This freed Turkey of fear of a Russian attack in case it became involved in war with the Reich. Further Soviet-Turkish negotiations, which plainly irritated Berlin, ensued. On April 6, three hours before the German invasion of Yugoslavia began, a Soviet-Yugoslav pact of friendship and nonaggression was signed. During the Balkan hostilities the Soviet press openly showed sympathy for the Yugoslavs.

Communist organs in Sweden and other neutral countries began to denounce German policy openly for the first time since the conclusion of the Nazi-

Soviet pact of 1939. On April 12 the Soviet Government notified Hungary that the occupation of Yugoslav territory by Hungarian troops had "made a particularly bad impression" in Russia and could not receive Soviet approval. On April 29 Moscow banned shipments of war material across the Soviet Union, thus cutting off German war supplies to Japan. Shortly afterward the Soviet Government formally denied foreign reports of Russian troop movements to the western frontier.

That the Russians were not ready for a showdown with Hitler was indicated on May 9 when Moscow withdrew recognition of the Yugoslav, Belgian, and Norwegian Governments-in-Exile, all of which were allied with Britain. Moreover on May 16 Moscow extended diplomatic recognition to the pro-Axis regime of Premier Rashid Ali Al-Gailani in Iraq, which was then involved in hostilities with Britain. In Allied capitals, this move aroused fear of a Nazi-Soviet agreement dividing all of Asia Minor into German and Russian spheres of influence.

Following the German occupation of Crete, it was generally expected that Hitler would strike through Syria at the Iraq oil fields and the Suez Canal. But early in June a large-scale transfer of German forces from the Balkans to the Russian frontier was reported. More German troops landed in Finland (q.v.) and Berlin was reported to be pressing Moscow for the right to place German technicians in charge of food and oil production in the U.S.S.R.

Berlin maintained a studied silence on German-Soviet relations while the official Soviet news agency, Tass, on June 13 ridiculed foreign forecasts of the coming Russo-German war as the "clumsily concocted propaganda of forces hostile to the U.S.S.R. and to Germany and interested in further extension and unleashing of war." Tass declared that "it should be assumed" that German troop movements had no bearing on Soviet-German relations; that the Reich had made no demands upon Russia; and that "according to information at the disposal" of Moscow, Germany "abides by the provisions of the Soviet-German pact of nonaggression as unswervingly as the Soviet Union." The agency described the annual maneuvers of Red Army reservists along the western frontiers as for training purposes and in no way inimical to Germany. Nine days later the German invasion of Russia began.

Russian Resistance. The powerful drive of the Germans and their allies quickly overran all of the border territories annexed by Russia from Poland, the Baltic States, Finland, and Rumania during 1939 and 1940. The Russian aggressions of the preceding two years proved a boomerang, as they contributed directly to the entry of Finland and Rumania into the struggle on the Nazi side. Revolts of nationalist and anti-Communist elements in Estonia, Latvia, and Lithuania assisted the German drive (see each country under *History*).

But once on Russian territories, the invaders met unyielding resistance from the civilian as well as the military population. The Russian scorched earth policy left cities, villages, and fields in ruins before their occupation by the advancing Axis forces. There was no sign of the expected internal revolt against Stalin's leadership. Despite the tremendous loss of men, war material, and economic resources (see *WORLD WAR*), the morale of the Russian people at the end of 1941 appeared unshaken. Meanwhile Soviet propaganda was employed with considerable effect to weaken the morale of the opposing troops and to stimulate revolt against the Reich throughout German-occupied

Europe. Russia's fighting resistance, the final stemming of the German onslaught, and the Soviet counter-offensive in December had great influence in encouraging the subject peoples of Europe to continue their struggle against German overlordship (see *GERMANY* under *History*). The technical efficiency and discipline of the Red Army likewise served to enhance the prestige of the Russian Communist regime throughout the world.

Alliance with Britain. Another result of the German attack upon Russia was to force Moscow into close military and political collaboration with Great Britain, the United States, and the other democratic powers. Stalin's "independent" foreign policy during the years preceding the German attack had been markedly inimical to British interests. Early in 1941 British spokesmen repeatedly complained that Russia was supplying Germany with war materials, partly through trade with the United States.

Nevertheless the Churchill Government flatly rejected Hitler's bid for Britain's neutrality or active support in his war against the Soviet Union. Instead Churchill on June 22 offered full British aid to Russia. This initiative led to the conclusion of the Anglo-Soviet mutual assistance pact of July 12, joint Anglo-Soviet occupation of Iran in August-September, the Anglo-American-Russian conference in Moscow in October, and the large-scale delivery of British and American arms to Russia. Anglo-Soviet collaboration was extended into the economic and diplomatic field but without removing all evidences of mutual distrust and antagonism between the two powers (see *GREAT BRITAIN* under *History*).

Aid from United States. Russian relations with the United States during the year closely followed the course of Anglo-Soviet relations. While striving to prevent closer Russian cooperation with Germany and Japan, Washington during the first half of the year curtailed exports to the Soviet Union in response to British complaints that this trade was aiding Germany. A marked coolness developed between Moscow and Washington, particularly after the U.S. Government early in May stopped exports to Russia of all machinery and equipment capable of being utilized in defense production. Russian-American trade came to a virtual standstill early in June and experts attached to the Soviet buying and selling agency in the United States were shifted to South America. Some \$40,000,000 of Soviet credits in the United States were frozen on June 14.

This situation changed almost overnight upon the outbreak of German-Soviet hostilities. President Roosevelt on June 24 announced that all possible aid would be extended to the Soviet Union. The frozen credits were released. Roosevelt's announcement of June 25 that the U.S. neutrality statute would not be applied against the Soviet Union made possible immediate shipments of arms, oil, and other war materials from U.S. ports to Vladivostok and Archangel. Two high Soviet military officials arrived in Washington July 26 to expedite shipments of supplies to Russia.

On July 30 Roosevelt's emissary, Harry L. Hopkins, arrived in Moscow to discuss supply problems. The U.S. Government on August 4 made a formal commitment to send arms and supplies to Russia, if possible in American ships. On August 15 the U.S. Treasury advanced Russia \$10,000,000 against future deliveries of Soviet gold. Early in September a mission of Russian airmen flew to Washington from Moscow via Alaska to speed up war shipments from the United States. It was announced September 17 that the U.S. Defense Supplies Corporation had contracted with the Soviet-controlled

Amtorg Trading Corporation for the purchase of \$100,000,000 worth of manganese, chromite, asbestos, and platinum from Russia. Of this sum \$50,000,000 was advanced to the U.S.S.R. before receipt of the materials.

As a result of the three-power conferences held in Moscow September 29–October 2, the American and British representatives agreed "to place at the disposal of the Soviet Government practically every requirement for which the Soviet military and civil authorities have asked." Washington extended the Soviet Government another \$30,000,000 credit against Russian gold deliveries on October 20. On October 30 it announced that Russia was being given priority over the U.S. Army with respect to American combat planes and related war materials. That same day President Roosevelt in a letter to Premier Stalin promised Russia lease-lend aid to the value of \$1,000,000,000. This loan was to be repaid without interest over a 10-year period beginning five years after termination of the war.

There followed on November 6 the appointment of Maxim Litvinov as Soviet Ambassador to the United States, replacing Constantine A. Oumansky. Shortly after his arrival in Washington in December, Litvinov announced the rejection by Moscow of Anglo-American requests for Russian aid in the war against Japan. He said the Soviet Union could make its greatest contribution to the defeat of the Axis powers by concentrating on Hitlerite Germany. It was reported that Moscow had received and rejected a German offer of a separate peace immediately after Japan entered the struggle.

Relations with Japan. Japanese efforts to secure an agreement with the Soviet Union that would free Tokyo's hands for an attack upon French, British, and American possessions in southeastern Asia finally succeeded in 1941 after lengthy negotiations (see YEAR BOOK for 1940, p. 382). On April 13 Foreign Ministers Molotov and Matsuoka signed a nonaggression pact in Moscow recognizing existing Japanese-Soviet frontiers in northeastern Asia and agreeing to remain neutral in the event that either power became involved in war with third powers. The pact reduced the danger that Japan would join Germany in a simultaneous attack upon Russia. *Pravda*, organ of the Russian Communist party, hailed the agreement as a "bewildering blow" to Anglo-American plans for drawing Russia into war with Germany or Japan.

Immediately after the conclusion of the pact with Japan, large-scale transfers of Russian troops from Siberia to western Europe were reported. Another report indicated that these troops were transferred not to Europe but to the new Trans-Northern Siberian Railway from Lake Baikal to Komsomolsk. Less vulnerable than the original Trans-Siberian line to attack by the Japanese, this new railway with its garrison points and industrial centers was reportedly converted into the main Siberian defense base. After the German invasion began, Moscow showed strong apprehension of a Japanese drive into Siberia. Russian naval forces in the Far East were strengthened despite the strain of the German-Soviet War. In November the Soviet official spokesman reaffirmed the Soviet-Japanese neutrality pact, and it was invoked by Moscow after December 7 as a reason for Russia's refusal to join Britain and the United States in resisting Japanese aggression.

Other Foreign Relations. Russia's relations with all of the other anti-German powers underwent a marked change after the German attack began. The unofficial state of war between Russia and the Polish Government-in-Exile was terminated. Diplo-

matic relations were established with the Polish, Belgian, Czechoslovak, Greek, and Norwegian Governments-in-Exile, all of them allies of Great Britain. This was followed by the conclusion of Russian military accords with the Czechoslovak and Polish Governments-in-Exile under which Polish and Czechoslovak forces were raised in Russia for service as independent armies under Russian ultimate command (see POLAND and CZECHOSLOVAKIA under *History*). Through British and American mediation, an unsuccessful effort was made to conclude peace with Finland (q.v.) on the basis of the pre-1939 Finnish-Soviet frontiers.

In August the Soviet regime also revived the Pan-Slav movement of Czarist Russia in order to promote the unity of all the Slav peoples in resisting German domination. On August 10 the novelist Alexei Tolstoy addressed a meeting in Moscow attended by Poles, Czechs, Serbs, Croats, Slovenes, Macedonians, and Montenegrim, calling upon them to unite with Russia for the final destruction of German fascism.

Anti-Religious Attitude Modified. Another move by the Soviet Government to win foreign and possibly domestic support against the invader was to raise the cry of "anti-Christ" against Hitler and his regime, while curtailing the anti-religious propaganda that had been encouraged in Russia since the Bolshevik revolution. On October 3 President Roosevelt revealed that he had raised the question of greater religious freedom in Russia in connection with Russian-American negotiations on war supplies. The following day the official spokesman in Moscow reaffirmed Soviet freedom under the 1936 constitution to believe and practice any and all religions as well as to carry on anti-religious activities and propaganda. About the same time the Soviet Government suspended the publications of the League of Militant Atheists. On June 29 the Primate of the All-Russian Orthodox Church and Metropolitan of Moscow threw his influence behind the Government's war effort, asserting that his church had decided to forget the past.

Internal Developments. Internal politics in 1941 were marked by the emergence of Joseph Stalin as the official head as well as the unofficial dictator of the Soviet Union. During the first half of the year, there was also an extensive reorganizing and strengthening of the Government and all departments of the national economy in anticipation of an international crisis.

A Georgian, Lorenti Beria, was advanced from the post of Commissar of Domestic Affairs to that of Commissar of State Security on January 31. In mid-February the first national conference of the Russian Communist party since 1939 convened in Moscow. It was featured by attacks upon lag-gard industries and ineffective workmen and managers. Sweeping reforms in industry were demanded to speed up production, particularly in armaments. The conference expelled Maxim Litvinov, the former Foreign Commissar, from the Central Committee of the Communist party for alleged "inability to discharge obligations." He was replaced by V. G. Dekanozov, Soviet Ambassador to Berlin. This change was part of a drastic shake-up of the Central Committee in which 19 of the 72 members were dropped. At the same time many heads of Government departments and industries were threatened with dismissal unless their respective departments showed improved efficiency.

Fourteen hundred delegates, including 117 from newly annexed Finnish, Estonian, Latvian, Lithuanian, and Rumanian territories, met in Moscow

February 24 for the eighth session of the Supreme Soviet. They approved a budget for 1941 of some 216 billion rubles as compared with 179 billions in 1940. Total national income in 1941 was estimated at 222.4 billion rubles. Defense appropriations increased from 57 billions in 1940 to 70.9 billions. To meet steadily growing defense costs, the income tax rate for peasants was raised from 3 to 4 per cent of gross income to between 4 and 8 per cent.

Defense Preparations. At the meetings of both the Communist party conference and the Supreme Soviet, speakers stressed the necessity for strengthened defenses despite frequent references to Stalin's "wise foreign policy" that had kept the Soviet Union "outside the second imperialist war." Under the compulsory labor decree of 1940, the Government on February 5 called out 46,000 more boys of 17 years of age to learn the timber and building material trades. This brought to 800,000 the number of youths to be trained for labor service in armament and other industries in 1941. Meanwhile there had been extensive shake-ups in the military command. Gen. G. K. Zhukov, who had distinguished himself in fighting the Japanese in Outer Mongolia in 1938, was appointed Vice Commissar of Defense and Chief of the General Staff of the Red Army on February 12. In a message to the Red Army on its 23rd anniversary, February 23, Zhukov declared that "shortcomings and defects" in the armed forces had been remedied by the 1940 reorganization which curtailed the powers of political commissars and gave military commanders undisputed authority.

On March 6 the Presidium of the Supreme Soviet removed I. P. Sergeev, Commissar for Munitions, for inefficiency and appointed P. N. Goremkin, former Vice Commissar of the armament industry, in his place. The extent of Soviet military preparations was screened by an impenetrable censorship and anti-espionage system. On May 17 even foreign diplomats accredited to Moscow were forbidden to travel in border zones and key centers without official authorization. As a result of the Red Army's secrecy, the German army and the world at large were surprised by the extent and quality of Russian military equipment when the Russo-German conflict began. The destruction of the Russian forces had appeared to Hitler and his commanders as an easy six weeks' task for the formidable German army and air force. But five months of terrific struggle found the Red Army still largely intact and capable of launching a powerful counteroffensive against the invaders. In anticipation of a long war of attrition, the Russians on October 1 initiated compulsory military training for all men between the ages of 16 and 50.

Stalin Becomes Premier. The intensification of the international crisis as it affected the Soviet Union was reflected in the assumption of the Premiership by Joseph Stalin on May 6. The former Premier, Vyacheslav Molotov, retained the post of Foreign Commissar and was appointed Vice Premier, or vice chairman of the Council of People's Commissars. Stalin thus became official as well as actual head of both the Soviet Government and the Russian Communist party, the positions held by Lenin previous to his death in 1924.

War Measures. The German invasion brought further important political changes and even greater concentration of power in Stalin's hands. On June 22 martial law was proclaimed in all the western border areas of the Soviet Union from the Arctic to the Black Sea. The same day Vice Premier Molotov, in a broadcast to the Union, de-

nounced the German attack as "perfidy unparalleled in the history of civilized nations." Declaring that the war "has been forced upon us, not by the German people . . . but by the clique of blood-thirsty Fascist rulers of Germany who have enslaved Frenchmen, Czechs, Poles, Serbians, Norway, Belgium, Denmark, Holland, Greece and other nations," he predicted the invaders would meet a fate similar to that of Napoleon.

The Soviet mobilization and war precautions were reported to have proceeded smoothly and with unexpected efficiency. All industries and offices were placed on an overtime basis June 26. Sale of alcoholic drinks was prohibited in Moscow. Strict measures were taken to deal with fifth columnists, spies, and enemy parachutists. On July 1 the Presidium of the Supreme Soviet, the Central Committee of the Communist party, and the Council of People's Commissariats announced their decision to concentrate all power in the hands of a Committee for State Defense, headed by Stalin as chairman and Molotov as vice chairman. The other members were Marshal Klementy E. Voroshilov, chairman of the Defense Council; L. P. Beria, Commissar for State Security; and Georgi M. Malenkov, secretary general of the Communist party's Central Committee. In Leningrad at the same time Soviet authorities conscripted all men between 16 and 50 and women between 16 and 45 for labor service on defense works.

Stalin made one of his rare radio broadcasts to the Soviet peoples on July 3. He said the German armies were continuing to press forward and that "a grave danger hangs over our country." Declaring that a German victory would mean restoration of the great landed estates of Czarist days and enslavement by "German princes and barons," he called for a scorched earth policy to deprive the invaders of food and shelter, the ruthless extermination of defeatists, saboteurs, and spies, for a revitalized munitions and factory output, and for better transport organization. His instructions were carried out. On July 12 Stalin divided the military command among Marshals Voroshilov, Budenny, and Timoshenko.

As the German armies advanced upon Moscow, most of the Soviet Government services were moved in mid-July to Kazan, 450 miles to the east. However Stalin and his key associates remained in the capital. Rationing of foodstuffs and manufactured goods was introduced in Moscow July 16. Bread cards were issued for the third time in the Soviet Union's history. Dual control of army units by officers and political commissars, the latter representing the Communist party, was restored on July 17 after having been abolished in August, 1940. The political commissars were directed to seek out "cowards, panic-mongers, and deserters" and to report unworthy officers directly to the Red Army High Command. This move suggested the spread of some instability and suspicion behind the Russian lines.

Stalin continued the centralization of power in his own hands on July 20 by taking over the post of Defense Commissar from Marshal Timoshenko and assuming direct control over a reorganized Commissariat for Internal Security. He appointed seven new Vice Commissars of Defense to serve under him, thus increasing the number of such commissars to 14. A ruthless guerrilla warfare was organized behind the German lines that effectively harassed and delayed their advance.

Dnieper Dam Destroyed. In line with Stalin's scorched earth policy, the retreating Russians about August 20 blew up the great Dnieper Dam,

one of the proudest engineering achievements of the Soviet regime and important both to the navigation system on the Dnieper River and as the chief source of power for the industries of the Ukraine. The German threat to Leningrad led to the establishment in that city on September 3 of a Supreme Military Soviet of six men to "mobilize all available forces for the defense of the city." On September 8 the Soviet Supreme Council in Moscow announced its decision to resettle in Siberia some 400,000 peasants of German origin inhabiting the Volga German Republic to avert the danger of possible fifth column activities among them. A decree of September 24 formally abolished the German Volga Republic, which formed an administrative unit of the Russian Soviet Socialist Republic.

Capital Moved. When the German drive on Moscow appeared stalled, the Soviet Government services and foreign diplomatic staffs that had moved to Kazan returned to the capital. However the Nazi offensive was resumed with increased fury in October. As Hitler's armies approached to within 60 miles of Moscow, a state of siege was proclaimed there and in adjoining districts on October 20. At the same time Stalin issued a special order calling for a fight to the finish to save the capital. As in Leningrad, the citizens and soldiers rallied for a last-ditch defense of Moscow which proved successful. Meanwhile a temporary seat of Government was established on October 16 at Kuibyshev (Samara), the easternmost point on the Volga River. The foreign diplomatic staffs and most of the government services were transferred there, but Stalin again remained in Moscow to direct the war effort.

Stalin Rallies Nation. At the height of the German offensive, Stalin seized the opportunity presented by the 24th anniversary of the Bolshevik Revolution to deliver two fighting speeches (November 6 and 7) rallying the peoples of the Soviet Union to a war of annihilation against Germany. He asserted the Soviet Union was united with Britain and America in a "war of liberation" against Hitler, admitted "temporary military reverses" by the Red Army, and called upon Britain to open a second front in Western Europe to relieve pressure on the Russian forces. He placed Soviet casualties at 1,748,000 against German losses of 4,500,000.

In his second speech, he declared the invaders were "straining their last forces" and facing disaster. "Another few months, another half-year, one year, maybe, and Hitlerite Germany must burst under the weight of her own crimes." The Soviet Union's position, Stalin said, was not as bad as in 1918 when the "foreign interventionists" were defeated. He predicted that winter weather, the weight of Soviet resources, an accelerated output of munitions, discontent in occupied Europe and Germany, and aid from Britain and the United States would spell eventual defeat for Russia's enemies.

Under Stalin's firm leadership, the Russians withstood the German attacks unflinchingly while speeding the production of more war materials and the training of great new armies in preparation for a long war. Many of the key war factories and plants were removed from the Moscow area and other vulnerable regions to the east. At the end of November the German advance was halted short of Moscow and Leningrad and in December Russian counterattacks reversed the tide of the great conflict, at least for the rest of the winter.

The importance attached to the Soviet Govern-

ment's new ties with the democratic powers was indicated by the restoration of Maxim Litvinov to something of his former prestige and power. His appointment as Ambassador to Washington on November 7 was followed by his elevation to the post of Deputy Commissar for Foreign Affairs on November 11. On December 6 it was announced that elections to the Supreme Soviet, due to be held that month, had been postponed by decree of the Presidium due to the war crisis.

German Rule in Russia. The great expanse of western Russia occupied by the German and allied armies up to the end of 1941 was placed under a "Reich Minister for the East" and divided into two regions—"Ostland," including the Baltic States and the former White Russian Soviet Republic, and "Ukraine," comprising all the remaining occupied districts to the south. Dr. Alfred Rosenberg, chief Nazi party ideologist, was appointed Reich Minister for the East. "Ostland" and "Ukraine" were entrusted to the administration of Heinrich Lohse, former Governor of Schleswig-Holstein, and Erich Koch, former Governor of East Prussia, respectively.

"Ostland" and "Ukraine" were subdivided into administrative regions along the lines of former national or regional boundaries (see ESTONIA, LATVIA, and LITHUANIA under *History*). To the bitter disappointment of Ukrainian nationalists, who had hoped for an independent or autonomous Ukrainian republic under German protection, Eastern Galicia was incorporated in the Government-General of Poland while Odessa and its hinterland were allotted to Rumania.

The German program for the agricultural exploitation of the newly conquered Russian territories was set forth in Berlin on August 31. It was asserted that the restoration of the large landed estates would under no circumstances be tolerated. The Soviet collective farms were to be continued in operation under managers selected from the "more expert and diligent peasants." The Russian peasants were to retain their homes and small individual plots of land as under Soviet rule, but those fulfilling the production quotas set by German authorities would be rewarded by additional allotments of land. The German occupation authorities, the announcement stated, would fix prices for farm products at a higher level than those paid by the Soviet Government.

A labor shortage and the uncooperative attitude of peasants and workers left behind the German lines proved an immediate obstacle to the resumption of normal agricultural activities. Soviet guerrillas harassed and intimidated those persons in the occupied areas disposed to cooperate with the German authorities. The Germans early introduced compulsory labor service. In the occupied areas of White Russia, the Nazi Governor conscripted boys from 14 to 20 years of age and girls from 17 to 24 years of age for labor in the fields. Arrangements were made to resettle peasants from Slovakia, Italy, and Rumania in parts of the fertile Ukraine to plant and harvest the crops in 1942. But the Russian scorched earth policy and the continued active and passive resistance of the natives prevented the Germans from reaping the expected economic benefits from their conquest.

* Territory. ^b Self-governing commonwealth. ^c Leased from the Republic of Panama in perpetuity. ^d Census taken Oct 1, 1939. ^e Estimate derived by extrapolation from the census figures for 1918 and 1939. ^f Office of the Governor. ^g Exclusive of military and naval services, etc., abroad (118,933).

Note. The United States also possesses, or claims possession of, the following Pacific islands: Baker, Howland, and Jarvis Islands, fringing the equator in mid-Pacific about 1,000 miles S S W of Honolulu (U.S. aerologic stations were established on all three islands in 1936 and an emergency airfield on Howland Island in 1937); Johnston Island (q v), Midway Islands (q v), Palmyra Islands (q v), and Wake Island (q v). Canton Island (q v.) and Enderbury Island are under joint Anglo-American administration.

The population of the United States (Sixteenth Census) April, 1940: 131,669,275. (For populations of individual States, see articles on the several States, Territories, and Possessions.) The racial composition of the population was as follows: There were 118,214,870 whites of whom 106,795,732 were native and 11,419,138 foreign born; 12,865,518 Negroes; and 588,887 persons of other races. The last-named category included 333,969 Indians, 77,504 Chinese, 126,947 Japanese, 45,563 Filipinos, 2,405 Hindus, and 1,711 Koreans. See also the articles on ENEMY ALIENS and IMMIGRATION.

ADMINISTRATION

Unity. After months of uncertainty, late in 1941 the United States marched to war under the leadership of President Franklin D. Roosevelt. Not since the dark depression days of 1933 had the country been so firmly united behind him as it was in support of the energetic steps which followed the Japanese attack and the declarations of war by Germany and Italy. The once isolationist *Chicago Tribune* and *New York Daily News* ceased all recriminations and pledged their support. The leaders of the America First Committee expressed their readiness to fight through to victory under the leadership of President Roosevelt. Joseph W. Martin, Republican leader, called a political truce for the duration of the conflict. Westbrook Pegler, once a consistent critic of the administration, declared that isolationists should thank their lucky stars that Mr. Roosevelt was President. "A better fighter to conduct the war could not be found."

What opposition still existed after the Japanese attack of December 7 came from the extreme left and the extreme right. A few Socialists and the members of the Fourth International boldly proclaimed the conflict "imperialist" in character and asserted that denunciations of fascism served merely to obscure more basic economic conflicts between the contending powers. The press of the Christian Front attacked the policies of President Roosevelt, ignored Japanese aggressions, and placed the blame for the war squarely on the Administration. Other native fascists, like the "Silver Shirts," while sharing this view, nevertheless quietly suspended their activities. (See COMMUNISM; FASCISM.)

The treacherous Japanese attack at Pearl Harbor had served American patriotism well. The Axis Powers had the advantage of striking a heavy surprise blow. But it was at once plain to the most reluctant citizen that our involvement in the conflict was caused not by any machinations of British capitalists, Jewish internationalists, or Russian Communists, but by a forthright act of aggression against the United States. For the American people, the issue could not be confused.

The President. Franklin Delano Roosevelt on January 20 assumed the Presidency of the United States for the third time. Eight years earlier he had taken office in the midst of a grave national crisis brought on by economic depression. Fear of impending disaster had united all elements of the population behind him on Mar. 4, 1933. Then came

the New Deal with its measures of social relief, of economic planning, and of reform. Within a brief period, the spell which confusion and fear had woven over all parties and interests was broken. Many conservative groups came to regard the New Deal with hatred, while the President, as avowed champion of the underprivileged, declared in the 1936 campaign that he had just begun to fight for his program of reform and readjustment.

By January of 1941, many of the hard fought domestic issues had been obscured by the international crisis and the growing menace of the aggressive Axis states. But they were not forgotten. Early in the year, Roosevelt called the attention of Congress to the continuing unemployment and relief problem, while later he pledged that his program of social reform would not be scrapped. But the fascist threat called for a new type of leadership, striving to rally all sections, all faiths, and all economic elements behind the government. It became plain that the President was striving to achieve the highest possible unity of capital and labor under the twin banners of democracy and resistance to fascism. In his Labor Day speech, he said to worker and employer: "The right of freedom of worship would mean nothing without freedom of speech. And the rights of free labor as we know them today could not survive without the rights of free enterprise. That is the indestructible bond that is between us—all of us Americans: interdependence of interests, privileges, opportunities, interdependence of rights. That is what unites us—men and women of all sections, of all races, of all faiths, of all occupations, of all political beliefs. That is why we have been able to defy and frustrate the enemies who believed they could divide and conquer us from within."

The proclamation of a limited national emergency shortly after the outbreak of the war in Europe, and of an unlimited national emergency on May 27, 1941, served to concentrate vast powers in the hands of the Chief Executive. The President's normal constitutional authority is highly elastic; and the statutes dealing with an "unlimited emergency" enabled him to perform important additional functions. The creation of the various defense agencies within the Executive Office of the Presidency made it possible for him to control much of the national effort simply by issuing orders to their heads, or prescribing regulations for their work. (See NATIONAL DEFENSE AND WAR AGENCIES.)

During the year, Congress voted Roosevelt authority to lend, lease, sell, or give American supplies to any Power whose defense was vital to the safety of the United States, to arm American merchant vessels and permit their entry into the combat zone, to increase the public debt to \$65,000,000,000, and finally to use American military and naval forces in any part of the world. He was given an unprecedented amount of money to spend.

Foreign Affairs. At the beginning of the year, the President had to fight every inch of the way for a policy which time and events very rapidly vindicated. On the night of Dec. 29, 1940, he told an estimated 100,000,000 radio-listeners of the trials which lay ahead. He declared that he would give no encouragement to peace overtures until the aggressor nations showed a clear intention to abandon all thought of dominating the world; he asserted that the United States urgently needed more ships, planes, and guns. He warned the Axis that no dictator could weaken the American determination to aid Britain. To foreign critics of our neutrality policies, he said that it was no more unneu-

tral for us to send weapons to Britain than it was for Sweden and Russia to send war materials to Germany. He disavowed any intention of sending an expeditionary force beyond our borders.

The speech was heard by a divided nation. The chairman of the Committee to Defend America by Aiding the Allies, William Allen White, commented that he was in that organization for the purpose of keeping America out of war. This did not satisfy the policy committee, which emphatically endorsed the President's address. The No Foreign War Committee, headed by Verne Marshall, demanded that the President repeat his campaign promises against American involvement. Sens. Millard Tydings, Rush Holt, A. H. Vandenberg, and Burton K. Wheeler declared that the President should bring the warring nations of Europe together to work out a just peace. What they meant by a just peace was explained by Wheeler in a nation-wide broadcast. Germany was to be given her 1914 boundaries, while her colonial empire was to be returned to her. France, the Netherlands, Belgium, Norway, and Denmark would be restored as independent states, while Poland and Czechoslovakia would be given autonomy. But newspaper utterances and careful polls demonstrated that an overwhelming majority of Americans supported the policy of aiding Britain even if it meant risk of war.

The President was in no way daunted by the storm which broke around his head. In a determined and eloquent message of nearly four thousand words to the incoming 77th Congress, he reasserted the challenge of America to the Axis dictators, and asked for full means to defend democracy. He warned appeasers that no realistic American could expect from a victorious dictator international generosity, or a grant of true independence to conquered nations, or world disarmament, or freedom of expression, or freedom of religion, or even good business. He linked American security from invasion to the ability of the British navy to retain its predominant position. He saw a major menace in the activity of fifth columnists in Latin America. To the American people he said that while there was need for general sacrifice in speeding up production, his social program would not be jettisoned in the interests of preparedness. To the peoples of other continents he proclaimed that the United States looked forward to a world founded upon four essential freedoms: freedom of speech and worship, freedom from want and fear

Some idea of the vast extent of the defense measures contemplated by Roosevelt was given in the budget message which he submitted to Congress on January 8. This budget called for appropriations of \$17,485,529,049, of which \$10,811,000,000 were to be used for defense, and \$6,674,528,049 for other governmental activities. This was exclusive of the cost of furnishing aid to Britain. The President esti-

OEM Chart by Grant

DEFENSE NEEDS ALTER THE NATIONAL PICTURE

mated the revenues at \$8,275,435,000, and the deficit at \$9,310,093,049. The public debt, which already was approaching \$45,000,000,000, would rise to more than \$49,000,000,000 by July 1, 1942. Nondefense costs would have to be cut; and agencies in charge of social security, public works, and relief were asked to get along with decreased appropriations. The President called for new taxes, though he gave no details as to their character.

What President Roosevelt meant when he promised aid to the democracies became evident early in January when Rep. John W. McCormack of Massachusetts introduced the lend-lease bill, H.R. 1776. Once more the foreign policy of the President was severely attacked. Charles A. Lindbergh, spokesman for the America First Committee, told a Senate Committee that he hoped neither Britain nor Germany would win, that America was in no real danger of invasion, and that the destruction of the British Navy would not affect the United States. Testimony in much the same vein was given by Hugh Johnson, Norman Thomas, Hanford MacNider, William R. Castle, and others. Congressional dissidents cited as grounds for opposing the legislation the tremendous powers the bill gave President Roosevelt. The administration countered with an opinion of Supreme Court Justice Sutherland, rendered in 1936, that the power of the President to conduct the foreign policy of the nation was exclusive and plenary. Public sentiment was manifestly behind President Roosevelt, and after protracted debate his will prevailed. The bill was passed in much its original form (in the House 317-171, in the Senate 60-31) and signed on March 11.

Four days later, while the British, Chinese, and Greeks were holding the front line of democracy, President Roosevelt spoke to the country upon the urgent need for sacrifice and longer working hours. The determination of America, he said, must not and would not be obstructed by war profiteering, by shortsighted management, or by unnecessary strikes. The dictators of Japan, Germany, and Italy were solemnly denounced, the Turks and Yugoslavs were given encouraging words; the inhabitants of occupied areas were offered sympathy, and promised an opportunity to strike back. Perhaps most important of all were his words to the compromisers: "This decision is the end of any attempts at appeasement in our land, the end of urging us to get along with the dictators."

On March 12, asserting that "this nation has felt that it was imperative to the security of America that we encourage the democracies' heroic resistance," President Roosevelt sent Congress a request for a \$7,000,000,000 appropriation "to accomplish these objectives." Then, striking swiftly on the diplomatic front, Roosevelt chose the moment when headlines were attesting the reluctance of Yugoslavia and Turkey to yield to the Nazis, to tell reporters that either nation would qualify automatically for weapons from America, if it elected to fight the Axis. Previously, he had declared that China and Latin America were also eligible. By September, lend-lease aid had been extended to the forces of China, Holland, Norway, Russia, Greece, and Czechoslovakia.

Supplementing various appropriations for the administration of the lease-lend act, on July 22 the Reconstruction Finance Corporation (q.v.), with President Roosevelt's approval, authorized a loan of \$425,000,000 to Great Britain. This was to be used to pay for raw materials contracted for in the United States before the lend-lease act was passed, and was to be available at the rate of approximate-

ly \$100,000,000 a month. Collateral was provided mainly by British-owned American securities and the capital stock of British-owned United States insurance companies, valued at more than \$500,000,000. The British were thus furnished dollar exchange without having to dispose of their securities at forced sale.

With aid to the nations resisting the Axis on its way, President Roosevelt advanced the American outposts in the Atlantic by negotiating with the Danish minister at Washington for defense rights in Greenland. An arrangement was concluded on April 10. The next day, Roosevelt by Executive Order removed the area at the entrance of the Red Sea from the combat zone which the Neutrality Act prohibited United States ships from entering. Then, on April 29, Roosevelt announced that American vessels were not barred from the combat zone when the exigencies of hemisphere defense required their presence in the banned area. Finally, in the second week in July, Roosevelt as Commander-in-Chief moved the United States squarely into the Battle of the Atlantic by landing naval forces at Reykjavik, Iceland. See ICELAND.

This was done, Roosevelt told Congress, because if the Nazis occupied Iceland they would threaten not only Greenland and the North American continent, but all shipping in the North Atlantic. He assigned the Navy the task of keeping the sea lanes open between the United States, Iceland, and other outlying garrisons. Warships were to shoot if attacked, and as early as July 11 Secretary Knox stated that an American destroyer had dropped a depth bomb when warned by its instruments of the proximity of a submarine. All of these steps had the manifest support of public opinion.

Until August, although it was manifest that the President was willing to do everything in his power to insure the defeat of the Axis, there had been no statement of his ultimate international aims. But in the middle of that month, at a dramatic meeting at sea with Winston Churchill, the broad principles of the Atlantic Charter were formulated. The two democratic leaders agreed that their nations sought no territorial gain or changes in opposition to the wishes of the peoples concerned. They recognized the right of all peoples to choose the form of government under which they live, and pledged that the sovereign right of self-government should be restored those forcibly deprived of their freedom. The democratic world order, they declared, would secure to all states equal commercial rights and equal access to raw materials, and would insure full collaboration among nations to bring about improved labor standards, economic prosperity, and domestic security. Once the Nazi tyranny had been overthrown, the peoples of the world were promised freedom from fear and want, freedom of the seas, and disarmament. (For text, see ATLANTIC DECLARATION.)

Meanwhile, in the middle of June, angered by an attack upon American shipping, the State Department ordered German and Italian consulates in the United States shut, German and Italian funds frozen, and Axis agents sent out of the country. American borders were closed to German and Italian travelers. This Executive Order of June 14, which froze the American assets of Germany, Italy, and all of Europe's occupied countries, included the resources of the Russian government, but with a proviso that they could be moved if a special license was granted. A few days later, Germany invaded Russia. On June 24, the Treasury Department issued a general license releasing \$39,000,000 of Russian assets. A month later (July 25), the

its efficiency. (See also UNION OF SOVIET SOCIALIST REPUBLICS.)

Late in the year, Secretary Hull had harsh words for Finland (q.v.). That nation, he declared, was acting in a manner inimical to American policy. While the Secretary was administering this reprimand, Maxim Litvinov, long an advocate of collective security against fascist aggression, replaced Constantine Oumansky as Russian ambassador to the United States.

Inasmuch as the United States was the principal source of supplies for the anti-Axis coalition, the problem of keeping the sea lanes open greatly troubled the President. For several years huge sums had been appropriated to the U.S. Maritime Commission for the purpose of building ships; and in 1940 construction was speeded up to replace the British and Allied vessels sunk by submarines. Rapid progress was made in shipbuilding—one large tanker was completed within ninety days after its keel was laid. (See SHIPBUILDING; SHIPPING.) The British meanwhile, aided by patrol work of the American Navy, made effective resistance to the submarine campaign. Nevertheless, the Battle of the Atlantic remained a source of acute anxiety, and many Americans were in favor of using the Navy to help convoy British ships carrying lend-lease materials. This movement aroused the anger of the isolationists. Early in May, fifty Senators and Representatives organized a bloc, led by Senator Taft, to oppose convoys "by whatever name they may be called." But that same week, the Senate Foreign Relations Committee significantly voted down resolutions forbidding convoys.

The attitude of the President was clear; for on May 6 Secretary Stimson, after talking with him, had declared it of the first importance to use the Navy to safeguard the delivery of munitions to Britain. This statement was underlined by the sinking of the American freighter *Robin Moor* by a submarine on May 31 in the South Atlantic. Other sinkings followed. Midsummer saw large American naval and air forces patrolling the Atlantic, and on September 11 President Roosevelt, in a speech broadcast to the world, warned the Axis that American warships and planes would fire at the sight of Axis warships which entered waters vital to American defense.

As Nazi attacks on American merchant ships and naval vessels increased, the President indicted the German Government in strong terms. On October 17 the destroyer *Kearny* was torpedoed off Iceland and badly damaged; on October 30 came news of the torpedoing and sinking of the destroyer *Reuben James* west of Iceland; while on November 4 the naval tanker *Salinas* was torpedoed in the same waters. The President called for modification of the Neutrality Act to permit the arming of American merchant ships, and to authorize their passage through combat zones into belligerent ports. A bill for this purpose passed the Senate, 50 to 37, on November 7, and the House, 212 to 194, less than a week later. The narrowness of the margin in the House was traceable in large part to dissatisfaction with the President's leniency toward strikers in industries essential to defense. Before the House voted, Roosevelt had to make a last-minute promise to deal severely with obstructive labor elements.

Tense as the situation was in the Atlantic, a still graver crisis developed during October and November in the Pacific. Japan, her trade with America cut off, was in an increasingly serious economic predicament. (See article on JAPAN.) The resignation of Prince Konoye's Cabinet in Tokyo on October 16 was regarded in Washington as an ominous sign;

and two days later General Tojo became head of a Ministry obviously hostile to the United States. Two special Japanese envoys, Admiral Nomura and Saburo Kurusu, were received by the President and Secretary Hull on November 17. But it was soon evident that the American and Japanese Governments were still deadlocked, while the tone of Premier Tojo's speeches was consistently obstinate. On November 26, Secretary Hull gave the Japanese a memorandum stating the American terms for a settlement. These included the withdrawal of all Japanese troops and naval forces from China and Indo-China; recognition by Japan of Chiang Kai-shek's Chinese National Government; abandonment by Japan and the United States of all extraterritorial rights in China; a new trade agreement between Japan and the United States; removal of all restrictions upon the funds of Americans in Japan and of Japanese in the United States; and an arrangement for stabilizing the yen with the dollar. The United States also invited Japan to change sides and throw her weight against Germany and Italy, and in favor of a just world-settlement on nonaggressive lines.

A few days later, while ominous reports of Japanese troop movements began to pour into Washington, President Roosevelt despatched a personal message to Emperor Hirohito, earnestly requesting a peaceful settlement of the Far Eastern situation. But the government of Admiral Tojo had for some time made up its mind to deliver a treacherous surprise attack. President Roosevelt received his reply on December 7 in the form of Japanese bombs dropped on the Pearl Harbor Naval base, where the United States lost six ships, including one battleship, and many airplanes. Shortly after the attack began, Kurusu and Nomura notified Secretary Hull that the American terms were unacceptable; and they heard him declare that Japan's conduct in the negotiations thus ended had been "infamously false and fraudulent." The next day Congress formally declared war with but one dissenting vote. On December 10 Germany and Italy declared war upon the United States, and Congress immediately responded with unanimous declarations of war upon them. (For military events, see WORLD WAR.)

Latin America. As the European scene grew more threatening, the government moved to improve relations with Latin America. Early in March, Panama announced that it had agreed to permit the United States to build air defenses on its territory for the purpose of strengthening the canal. These were to be occupied for the duration of the international crisis. Mexico also permitted the United States the use of her airfields.

On April 1, Congress passed a joint resolution declaring that the United States would not recognize any attempt to transfer any geographic region in the Western Hemisphere from a non-American power to a non-American power. A week later, when President Roosevelt ordered the seizure of German, Italian, and other vessels in the harbors of the United States and its possessions, several Latin-American nations took similar action. In October, to ensure the loyalty of Brazil, the lend-lease administration extended a loan of \$100,000,000 to that nation. The next month, the United States agreed with Mexico to stabilize the peso by buying fixed amounts of Mexico's silver production. An agreement was also reached whereby the United States was to finance a Mexican road-building project. Mexico, in turn, promised to pay \$37,000,000 over a period of years to settle all agrarian and "general" claims of American nationals, to make a

trade agreement with the United States, and to attempt a settlement of the troublesome petroleum expropriation controversy. Late in the year, a small force of American troops was sent to Dutch Guiana to protect this important source of bauxite. The American Government promised to withdraw the troops as soon as the Axis threat was removed.

Meanwhile, various agencies in the office of Nelson Rockefeller, coordinator of inter-American affairs (q.v.), virtually bombarded the South Americans with good will. The coordinator also revealed to the President the names of 1,800 firms and persons in Latin America deemed to have been acting to benefit Germany and Italy; and on July 17, Roosevelt by proclamation forbade trade with them. Subsequent additions were made to this list. See also INTER-AMERICAN UNION OF THE CARIBBEAN; PAN AMERICANISM.

Canada. American diplomacy was active to the North as well as in the South. Early in the year representatives of Canada and the United States signed in Ottawa an agreement for the development of power throughout the Great Lakes and St. Lawrence Basin, and for a deep waterway from the head of the lakes to the harbor of Montreal. In April, Prime Minister Mackenzie King met with President Roosevelt and the outline of a coordinated war effort was discussed. The result was the President's announcement on April 20 of a Canadian-American pact for cooperation in the production of war materials for Great Britain and the democracies generally. On June 2, President Roosevelt signed a defense measure permitting Canadian ships to carry ore between American Great Lake ports during the 1941 season. In November, the United States Senate ratified a treaty with Canada allowing diversion from the Niagara River of additional water for power purposes.

Defense. The growth of the defense effort during 1941 required constant development and change in the administrative bodies conducting it. By the end of the year, there were 35 separate divisions, agencies, or offices concerned with defense under the President. (For a complete list, see NATIONAL DEFENSE AND WAR AGENCIES.) While Mr. Roosevelt has delegated increasing powers to various individuals and organizations, he has always retained ultimate control over all important matters of policy. In the defense administration when the year closed the most important agencies were the Office of Production Management, the Office of Price Administration, and the Supply Priorities and Allocations Board. It was the task of OPM (now War Production Board), the principal heads of which were William Knudsen and Sidney Hillman, to mobilize the nation's industry for the war effort. J. D. Biggers headed the production division, D. M. Nelson the purchases division, E. R. Stettinius, Jr., the

priorities division, and Leon Henderson, a price subdivision. In April, the price stabilization function was given over to a newly created agency, the Office of Price Administration and Civilian Supply headed by Leon Henderson. In August, Donald Nelson succeeded Stettinius as head of the priorities division, and D. MacKeachie was named purchasing director, succeeding Nelson, while Stettinius was made Lend Lease Administrator. The Supply Priorities and Allocations Board is a controlling and coordinating body with functions that are fairly well indicated by its name. Henry A. Wallace is chairman.

The Office of Lend Lease Administration is responsible for maintaining a constant flow of munitions and supplies to Axis opponents under the terms of the Lend Lease Act. Originally, the President designated Harry Hopkins to advise and assist him in carrying out the act. Hopkins was familiar with Britain's needs, having visited that country in January as Mr. Roosevelt's representative. Later he visited Russia. On August 28, Hopkins was appointed special assistant to the President in charge of all lend lease aid and Edward R. Stettinius was designated Lend Lease Administrator. The President, on September 16, changed the title of Mr. Stettinius to Special Assistant to expedite lend lease aid deliveries. At the time of the October appropriation of \$5,985,000,000 for lend lease administration, the President issued an executive order creating an Office of Lend Lease Administration with Stettinius as director.

Of cardinal importance to the defense program was the problem of priorities. On February 24, by Executive Order, the Federal government assumed priority control of the production of aluminum and machine tools. Later, on June 2, Congress authorized the President to impose mandatory priorities of wartime scope upon all of industry. Not only could the administration grant priority to contracts placed by the army and navy, but it was also given authority to establish the order in which materials and machines were to be delivered for all planes, tanks, ships, and other equipment produced for the lend lease administration. Then in August, Justice Samuel I. Rosenman of the New York State Supreme Court suggested the creation of the Supply Priorities and Allocations Board for the purpose of coordinating the work of those agencies directly concerned with civilian and war supply. As part of a general reorganization scheme, he suggested that the civilian supply section in the Office of Price Administration and Civilian Supply become the Division of Civilian Supply in OPM and that above the Office of Production Management should be established the Supply Priorities and Allocations Board to fix priorities and allocate supplies of raw materials, fuel, power, and other commodities.

At first glance, it would seem that this latest defense agency merely added to the complexity of the already complicated defense structure. But a real reason existed for its creation. The principal heads of OPM, Mr. Knudsen representing industry and Sidney Hillman labor, were both reluctant to disrupt the nation's normal industrial life by rigorously requisitioning the materials of industry for the defense effort. Their caution was strongly criticized by Mr. Henderson, director of the Office of Administration and Civilian Supply. The conflict between the two agencies was resolved for better or worse in the following manner: Henderson's decisions as head of the Division of Civilian Supply were made subject to veto by Knudsen as head of the Office of Production Management. Knudsen's veto as head of the Office of Production

THE SUMMONS TO WAR

President Franklin D. Roosevelt is shown addressing a joint session of Congress on December 8, when he asked the legislators to declare that a state of war existed between the United States and the Japanese Empire. Behind him are Vice-President Henry A. Wallace (left), President of the Senate, and Speaker of the House of Representatives, Sam Rayburn of Texas. The war declaration was voted within less than an hour.

International News Photos

THE LEND-LEASE ACT

Properly known as "an act further to promote the defense of the United States" it provided for United States aid to all nations fighting aggression.

Management was made subject to a majority vote of the members of the Supply Priorities and Allocations Board. The majority decisions of the Supply Priorities and Allocations Board could, of course, be vetoed by the President.

However, the defense set-up was constantly changing, and as 1941 drew to a close it was apparent that still more drastic changes were imminent. A strong public demand for a one-man direction of the vast industrial effort, under the President and Congress, was being heard.

The President took additional steps to conserve the resources of the nation for the gigantic mobilization which the defense effort required. On February 25, aircraft pilot trainers, beryllium, graphite electrodes, belladonna, atropine, sole leather, and belting leather were placed under export license effective March 10. This list was subsequently altered to include cadmium, carbon black, coconut oil, copra, cresylic acid, cresols, fatty acids produced from vegetable oils under export control, glycerin, palm kernel oil, pine oil, petroleum coke, shellac, and titanium Effective March 24, jute, lead, borax, and phosphates were added. An Executive Order forbade exports of petroleum products from Atlantic coast ports to any countries except those of the British Empire and those of the Western Hemisphere.

Thirty million farm people in 1941 were told by Secretary of Agriculture Wickard that "Food will win the war and write the peace." Farmers were instructed to produce not less but more. Moreover, the government announced that it wanted changes in the character of farm production. Secretary Wickard declared that he wanted less wheat and less cotton, but more meat, fats, fruits, vegetables, and dairy products. It was Mr. Wickard's object in 1941 to tie the efforts of the American farmer tightly into the war economy.

The task of obtaining, digesting, and utilizing information for war purposes was assigned to three well-staffed agencies, the Office of the Coordinator of Information, headed by Colonel William Donovan; the Office of Government Reports, which was made a permanent Federal Agency; and the Office of Facts and Figures, headed by Archibald MacLesh.

For further details, see separate articles on each of the above agencies.

Civil Liberties. Despite the concentration of power in the hands of the government and the pressure for a variety of restrictions, civil liberties throughout 1941 remained sturdily intact. The opponents of war had had their say, and when war came they acknowledged the importance of fighting it through until ultimate victory was achieved. Organizations which even after December 7 were unreconciled to the conflict went unmolested. Only the press of the German-American Bund was suppressed. The Department of Justice was active in rounding up enemy aliens (q.v.) once war was declared, but persons who had no apparent connection that was inimical to the defense effort were soon released. A Washington Grand Jury investigating Nazi activities indicted George Hill, Secretary to Representative Hamilton Fish, for perjury, and he was later convicted. George Sylvester Viereck, a registered Nazi agent, was indicted for withholding information concerning his activities as a foreign agent; while Laura Ingalls, famous woman flyer, was also indicted for receiving funds from the German government. But these cases, and some others like them, had nothing to do with civil liberties.

Although the Federal Bureau of Investigation (q.v.) in June smashed a Nazi spy ring of thirty-

three persons, the Department of Justice announced that only a negligible amount of sabotage could be attributed directly to the activity of enemy agents. In was only in Hawaii that the activities of foreign agents and fifth-columnists were serious.

The fact that there were not more cases of sabotage can be attributed in large part to the sudden shift in the Communist Party line following the German attack on Russia. Once Hitler invaded the Soviet Union, Communists ceased to regard the war as another imperialist struggle in which the working class of the world had no interest save to take advantage of whatever opportunities the struggle offered to stir resentment against the ruling class. For them, the war had become an humanitarian crusade to free the oppressed peoples of the world from the yoke of the fascist oppressors; and they rallied strongly behind President Roosevelt's defense effort. (See COMMUNISM.)

The Federal Government did its part to bring about better relations with the Soviet Union. Harry Bridges, an alien labor leader whom special examiner Charles B. Sears had recommended for deportation on the ground of affiliation with the Communist Party, was permitted to remain in accordance with the decision of a higher authority. The deportation proceedings against Joe Santo, once an official of the Transport Workers Union, were postponed indefinitely by the Bureau of Immigration and Naturalization. In Manhattan, the Rapp-Coudert committee, appointed by the New York State legislature to investigate subversive activities in the New York City schools, quietly folded its tents and departed from the scene. But things went badly for a small band of voluble Trotskyites who controlled the teamsters union in Minneapolis. Attorney General Biddle obtained their conviction on the ground of creating insubordination in the armed forces of the government.

Racketeering in the American Federation of Labor was dealt a blow when William Bioff and George Brown were convicted of extorting half a million dollars from four motion picture companies.

Administrative Officers and Developments. President, Franklin Delano Roosevelt; Vice-President, Henry A. Wallace; Secretary of State, Cordell Hull; Secretary of the Treasury, Henry Morgenthau, Jr.; Secretary of War, Henry L. Stimson; Attorney General, Francis Biddle; Postmaster General, Frank C. Walker; Secretary of the Navy, Frank Knox; Secretary of the Interior, Harold L. Ickes; Secretary of Agriculture, Claude R. Wickard; Secretary of Commerce, Jesse H. Jones; Secretary of Labor, Frances Perkins.

On June 12, Harlan Fiske Stone was made Chief Justice of the Supreme Court and James F. Byrnes and Robert H. Jackson were made associate justices. Francis Biddle replaced Jackson as Attorney General.

Late in the year, the Office of Production Management and the Department of Justice approved a policy whereby factories and plants might pool their productive resources to take on arms orders without fear of prosecution under the anti-trust laws.

A special committee of the Attorney General's office, headed by Dean G. Acheson, studied the problems created by Federal administrative agencies, with a desire not to hamper them "but to suggest improvements to make the process more workable." Its thousand-page report opposed the judicial curb on administrative agencies embodied in the Walter-Logan bill as unnecessary, but recommended other reforms: creation of an Office of Federal Administrative Procedure to study the

practices of quasi-judicial agencies; simplification of the procedure and regularization of the rules of such bodies; appointment in each agency of "hearing commissioners" to judge hearings; and provision that no prosecutor of a case should help judge it.

The Department of Justice ruled on July 16 that the Hatch Act, prohibiting Federal employees from engaging in political activities, does not apply to officers of the National Guard and selectees.

Within the Department of Justice was created a small business section; for the Administration, responding to pressure, became particularly interested in seeing that small business got its share of defense orders. The Federal Reserve Bank was instructed to extend credits to small business engaged in defense production. President Roosevelt on August 11 issued an Executive Order directing the Federal Reserve Board to use a World War statute to curb installment credit used for purchasing "consumers' durable goods."

Nonpartisan Unity. Throughout the year, prominent Republicans opposed the concentration of power in the hands of the executive. Echoes were heard of the isolationist charge that the President was using these powers to bring the nation closer to war. However, by the end of November even such a bitter opponent of President Roosevelt as Senator Taft was willing to admit that the peril of the foreign situation made an increase in the power of the executive necessary. Yet he was unwilling that the Congress should forego supervisory control.

Although individuals at times crossed the party line, Republicans for the most part opposed the vigorous anti-Axis policy of the administration. The one big break occurred when, under the prodding of Wendell Willkie, three Republican Senators came out for the repeal of the Neutrality Act. A few days later more than a hundred leading Republicans joined Willkie in a manifesto to the effect that the Neutrality Act should be repealed.

The foremost symbol of bipartisan unity was Wendell Willkie. Writing in the *Nation*, Arthur M. Schlesinger, Jr., drew a significant parallel between his activity in building Republican support for the foreign policy of the Roosevelt administration, and the role of Seward in rallying the Conscience Whigs behind Lincoln during the Civil War.

Labor. Labor organizations continued to gain in strength throughout the year, both the A.F.L. and the C.I.O. claiming about five million members as 1941 ended. Labor strife seemed incessant; the Department of Labor reported that in the first eleven months of the year, no fewer than 2,361 strikes were called, involving 2,389,685 workers in a loss of 22,448,787 man-days. Since many strikes directly affected the defense program, a demand arose for restrictive legislation. To this the Administration showed itself unfavorable, and no action was taken. Early in the year the House rejected a number of anti-strike proposals by large votes. However, public sentiment seemed strongly aroused by the tactics of John L. Lewis, head of the United Mine Workers, who in two important labor disputes tested the Federal Labor policy. One affected the soft coal miners, and terminated in a labor victory when the National Defense Mediation Board eliminated the forty-cent-a-day wage differential between the Northern and Southern areas in the Appalachian field. The other dispute involved the "captive" coal mines of the seven largest steel companies, which were on an open-shop basis. Late in October Mr. Lewis called a strike in defiance of President Roosevelt, who made three appeals to him to keep the men at work because of the de-

fense emergency. The strike was halted while the Mediation Board investigated the dispute; but after the Board on November 10 rejected the demand for the closed shop by a vote of 9 to 2, Mr. Lewis again called out the mine-workers. Once more the strike was stopped when President Roosevelt proposed arbitration. A board headed by Dr. John R. Steelman, director of the United States Conciliation Service, debated the matter; and on the same day that the war began Dr. Steelman joined Mr. Lewis in granting a closed union shop to the United Mine Workers, while B. F. Fairless, head of the United States Steel Corporation, dissented. Thus ended a dispute which at one time had threatened by sympathetic strikes to involve 450,000 miners and to cripple the steel industry. The House of Representatives in November showed its resentment by passing by a large majority the Smith bill to curb strikes severely; but the measure went no further.

The President intervened in another labor dispute. After a strike vote by the railway employees on August 5, he acted under the Railway Labor Act to set up an emergency mediation board. This, under the law, operated as a stay of proceedings. Late in the year the dispute was ended by a compromise increase in wages amounting to \$311,000,000 a year.

Throughout the year, the administration made extensive use of its good offices in helping management and labor patch up their differences. Federal labor conciliators scurried about the country, appearing wherever labor troubles threatened the disruption of production. Particularly difficult stoppages were certified to the newly-created National Defense Mediation Board by the conciliation service of the Department of Labor. Whenever the efforts of these agencies failed to promote a settlement, the administration resorted to other means. In June the President ordered the plant of the North American Aviation, Inc., at Inglewood, California, taken over to break a stubborn strike allegedly inspired by Communists. Later Federal troops took over the plant of Air Associates, Inc., at Bendix, New Jersey, after its officers had treated labor in a "recalcitrant" manner. The Navy took over the yard of the Federal Shipbuilding and Dry Dock Corporation after failure of the management to comply with a ruling of the National Defense Mediation Board (q.v.).

The Administration won a major victory when the Fair Labor Standards Act was upheld in the U.S. Supreme Court. It was bitterly criticized by labor for granting a contract early in the year to the Ford Motor Company, despite Ford's alleged refusal to comply with the terms of the National Labor Relations Act. On the other hand, OPM was attacked by employers for granting the American Federation of Labor closed shop privileges on defense construction contracts. The National Labor Relations Board, once harshly criticized, received fewer attacks as the year progressed. Edwin S. Smith, accused of bias in favor of the C.I.O., was denied a reappointment, the President giving his place to Gerard D. Reilly, former solicitor of the Department of Labor. See LABOR CONDITIONS.

LEGISLATION

77th Congress, First Session. The first session of the 77th Congress convened on January 3 and remained in session throughout the year. It adjourned formally on Jan. 2, 1942, after 365 days of session. The Senate had a membership of 66 Democrats, 28 Republicans, 1 Progressive, and 1 Independent. The House of Representatives had a mem-

bership of 267 Democrats, 162 Republicans, 3 Progressives, 1 Farmer-Laborite, 1 American Laborite, and 1 Independent Democrat.

The President of the Senate until January 20 was John N. Garner. On that day the post was assumed by Henry A. Wallace. The majority leader was Alben W. Barkley of Kentucky; majority whip, Lister Hill of Alabama; minority leader, Charles L. McNary of Oregon; and minority whip, Warren R. Austin of Vermont.

The Speaker of the House was Sam Rayburn of Texas; majority leader, John W. McCormack of Massachusetts; majority whip, Patrick J. Boland of Pennsylvania; minority leader, Joseph W. Martin, Jr., of Massachusetts; and minority whip, Harry L. Englebright of California.

Main Features of the Session. Legislation of the first session of the 77th Congress dealt mainly with national defense, taxation, and appropriations, and included the declarations of war on Japan, Germany, and Italy, and a wide expansion of the President's emergency powers. The total appropriations granted by the session amounted in round figures to \$58,000,000,000, of which approximately \$50,000,000,000 represented national defense commitments. The aggregate defense expenditures authorized from June 1, 1940, to Jan. 2, 1942, were stated by the Budget Bureau to be in round numbers \$71,000,000,000. In 1917-18, appropriations had totalled approximately \$36,000,000,000 during a congressional session of 354 days.

Congress in February lifted the statutory debt limit to \$65,000,000,000. This was an imperative measure, for the Federal debt was steadily rising; in the year ending Nov. 30, 1941, it grew by a total of \$10,828,597,372. Defense expenditures by the close of 1941 were at a rate exceeding \$1,500,000,000 monthly, and were then expected to rise in 1942 to more than \$4,000,000,000 out of a total national income of perhaps \$100,000,000,000. A heavy increase in taxation was indispensable. Congress was therefore asked to pass revenue measures which, bringing an additional \$3,500,000,000 into the Treasury, would lift the entire tax load to about \$13,000,000,000 a year. The President indicated in his budget message of January 8 that non-defense and nonfixed expenditures would be cut 15 per cent; but important groups continued to urge heavier reductions in these categories. See PUBLIC FINANCE.

Congress acted deliberately in framing the new tax bill, which did not pass the House until August 4, and the Senate till September 17. This measure, signed by the President September 20, imposed a wide variety of new levies, raised the income-tax rates steeply, and broadened the base of taxation by including low-income groups. More than half of the \$13,000,000,000 of Federal revenue would come from income and excess profits taxes. The Administration continued to press for additional taxes, and on September 24 Secretary Morgenthau recommended a 100 per cent tax on all corporate gains over 6 per cent. He also suggested a 15 per cent levy on payrolls, to be withheld at the source. But the year closed without action on these proposals. Resort was, of course, had to loans. Defense savings bonds and stamps went on sale May 1, and by the close of the year had yielded the Treasury more than \$2,500,000,000. The selling-pace increased sharply after the Japanese attack on Pearl Harbor early in December. See TAXATION.

Control of prices early became a major problem of defense economics. Remembering that in the first World War the general price level ultimately rose nearly 150 per cent and the cost of living more

than doubled, the public showed marked uneasiness over inflationist tendencies. During 1941, according to the Bureau of Labor Statistics, wholesale prices rose 18 per cent; the cost of living at the close of the year was 12 per cent higher than when war began. Price Administrator Leon Henderson estimated that if the rate of price-increases continued unchecked, the cost of the victory program would be increased by \$50,000,000,000. Mr. Henderson, though without legal authority to do so, fixed a large number of prices, and obtained a remarkable cooperation from industry. In July, when commodity averages advanced to a higher point than at any time since April, 1930, President Roosevelt called upon Congress "to act decisively and without delay" in passing price-control legislation. But powerful agricultural groups were hostile to price-control except with generous concessions to farmers, and when 1941 ended no legislation had been enacted. See BUSINESS REVIEW under *Commodity Prices*.

Although the world crisis mounted in gravity throughout the year, Congress yielded to pressure groups in passing various pieces of farm legislation, pension legislation, and highway legislation that were widely denounced as selfish grabs. The President vetoed a \$320,000,000 highway bill, which was repassed by the Senate over his veto, and a farm bill to freeze government stocks of cotton and wheat despite world needs. He announced on May 19, through Secretary Wickard, that he favored parity prices in 1941 for basic crops, and made it plain later that he opposed efforts of the farm bloc to fix a ceiling for agricultural prices at 110 per cent of parity.

On December 16 both houses of Congress passed bills to revive the broad war authority granted to President Wilson in 1917.

Enactments. There follows a brief summary of conspicuous features of the important measures enacted by Congress.

Chief Military Appropriations:

Emergency Cargo Ship Construction Act \$350,000,000, Army Clothing-Equipment Act \$175,000,000; Fourth Supplemental National Defense Act \$1,376,464,606; Navy Public Works Act \$100,502,883; Second Navy Public Works Act \$245,228,500; First Lease-Lend Appropriation Act \$7,000,000,000; Fifth Supplemental National Defense Act \$4,393,221,174; Defense Housing Act \$150,000,000; Naval Appropriations Act \$3,415,521,750; Navy Auxiliary Vessel Act \$300,000,000; Defense Public Works Act \$150,000,000, Military Establishment Appropriation Act \$10,384,821,624; Second Deficiency Appropriation Act \$1,041,444,529, Second Lease-Lend Appropriation Act \$5,985,000,000; Naval Facilities Act \$585,000,000, Third Navy Public Works Act \$244,929,800; First Supplemental National Defense Act, 1942, \$7,586,896,948, Second Supplemental National Defense Act, 1942, \$6,161,467,229, Defense Highway Act \$150,000,000; Navy Local Defense Ship Act \$800,000,000; National Defense Emergency Appropriation Act \$550,000,000, Third Supplemental National Defense Act, 1942, \$9,283,037,005

National Defense Measures:

The Naval Ship Alteration Act, signed January 29, authorized major improvements in the anti-aircraft defenses of combatant and auxiliary vessels of the Navy at a cost not exceeding \$300,000,000.

The Midshipmen Increase Act, signed January 29, increased the number of appointments at large to the Naval Academy from 15 to 25 and the number from the naval reserve from 50 to 100 It restored the five-appointment basis for each member of Congress.

The Lend-Lease Act, signed March 11, provided that for the benefit of any foreign nation whose defense the President deemed vital to the United States, he might sell, transfer, exchange, lease, or lend defense articles to any such nation, though only after consultation with the heads of the Army and Navy. He might also provide for repairing, reconditioning, outfitting, or testing any defense article used by such nations. This enactment was not to be construed as an authorization for conveying

The Defense Contract Bond Act, signed April 29, provided for the waiving of the Miller Act at the discretion of the Secretary of War or the Secretary of the Navy.

The Miller Act required mandatory performance and payment bonds in connection with supply contracts.

The Vinson Priorities Act, signed May 31, extended the President's authority under the Vinson Expediting Act of 1940 to priorities for orders for countries whose defense the President deems vital to the defense of the United States; with subcontracts or orders which the President should deem necessary to the fulfillment of these aims.

The Defense Public Works Act, signed June 28, authorized an appropriation of \$150,000,000 for the acquisition and equipment of public works made necessary by the defense program.

The Military Service Extension Act, signed August 18, authorized the President to extend for such periods as might be necessary in the interests of national defense, the periods of a service of all persons inducted into the armed forces for training. Such a period, however, was not to exceed eighteen months in the aggregate.

The Property Requisitioning Act, signed October 16, authorized the President during the national emergency and until June 30, 1943, to requisition property producing material essential to the defense of the United States. This was to be done only after all other means had been exhausted. Fair and just compensation to the owners was provided for.

The Neutrality Act Amendment, signed November 17, repealed section 2 of the Neutrality Act of 1939, which forbade commerce with States engaged in armed conflict; section 8 which authorized the President to prescribe and proclaim combat areas within which American merchant vessels might enter, section 6 which forbade the arming of American merchant vessels.

The Defense Highway Act, signed November 19, appropriated \$150,000,000 for the construction and improvement of access roads to military and naval reservations, defense industries, and sources for raw materials.

Removal of Restrictions on Service Act, signed December 11, suspends during the existence of any war in which the United States is engaged and for six months following its termination, the provisions of the law which impose restrictions on the territory within which portions of the military forces of the United States may be employed. See SELECTIVE SERVICE SYSTEM.

The First War Powers Act, 1941, signed December 18, fell into three parts. Title I, essentially the same as the Overman Act passed during the first World War, gave the President power to redistribute the functions of the various government agencies so that the war effort could be more effectively prosecuted. Title II gave the President power to waive bids on government work. Title III gave the President control over communications with foreign nations and the power to use property of the enemy which may be confiscated.

The Draft Act, approved December 20, amended the Selective Service Act of 1940 by extending the requirements for registration of men to include all those from 18 to 64 years of age, inclusive.

Seapower:

The Emergency Cargo-Ship Act, signed February 6, appropriated \$313,500,000 to the Maritime Commission to provide as rapidly as possible cargo ships essential to the commerce and defense of the United States.

The Bland Ship Requisitioning Act, signed June 6, authorized the President to take over by purchase or requisition any foreign vessels lying idle within the waters of the United States and its possessions.

The Merchant Ship Priorities Act, signed July 14, permitted the President to authorize the maritime commission to issue warrants evidencing priority rights in favor of certain vessels. The warrants were to be issued under regulations of the commission, approved by the President. See SHIPPING.

Housing:

The Defense Housing Insurance Act, signed March 28, amended the National Housing Act by adding a new title creating a Defense Housing Insurance Fund to handle the insurance of mortgages.

The Defense Housing Act, signed April 29, increased to \$300,000,000 the appropriation for defense housing. The average cost per family dwelling unit was not to exceed \$3,500.

The National Housing Act Amendment, signed June 28, continued for two years the authority of the Federal Housing Administrator to insure banks and mortgage companies making modernization loans. The aggregate insurance was increased to \$165,000,000.

The Defense Housing Insurance Act, signed September 2, increased to \$300,000,000 the aggregate amount of mortgages which may be insured under authority of the National Housing Act on property in areas in which the President determines that an acute shortage of housing exists so as to impede national defense.

Agriculture:

The Corn and Wheat Market Quota Act, signed May 26, 1941, established as farm marketing quotas for wheat and corn the actual production of the acreage planted, less the normal or actual production (whichever is smaller) of the

acreage in excess of the allotment granted. The bill also provided that if marketing quotas should become effective on corn or wheat for the 1941-42 marketing year, or subsequent years, a farmer producing in excess of his quota would have to store the excess, or deliver the excess to the Secretary of Agriculture, or pay a penalty on the excess equal to one-half of the basic loan in effect for cooperators.

The Agricultural Appropriation Act, signed July 1, 1941, gave the Department of Agriculture \$1,060,500,063 for the fiscal year ending June 30, 1942.

The Steagall Commodity Credit Act, signed July 1, extended until June 30, 1943, the life of the Commodity Credit Corporation.

The Parity Act, signed December 26, extended to Jan. 1, 1947, the period within which the Secretary of Agriculture might carry out the purposes of the Soil Conservation and Domestic Allotment Act.

The Sugar Quota Act, approved December 26, extended for an additional three years the quota system set up by the sugar marketing act of 1937.

Taxation:

The Excess Profits Tax Amendments Act, signed March 7, amended the Excess Profits Tax Act of 1940.

The Revenue Act of 1941, signed September 20, imposed new or heavier taxes designed to raise an additional \$3,553,400,000 annually to pay part of the cost of the nation's national defense and lend lease programs. See also TAXATION.

Miscellaneous:

The Alien Visa Act, signed June 20, permitted consular officials and the Secretary of State to deny visas to aliens who, in their opinion, sought to enter the United States for the purpose of engaging in activities detrimental to the public safety. See IMMIGRATION.

The Defense Entry and Departure Act, signed June 1, gave the President during the national emergency power to prescribe rules and regulations governing the entry into and departure from the United States.

The Petroleum Pipe Line Act, signed July 30, provided that whenever the President finds that the construction of a pipe line for the distribution of petroleum in interstate commerce may be necessary for the national defense, he shall be empowered to make such finding public. The construction is to be undertaken either by the government or by private persons, who shall be endowed with the right of eminent domain.

The Reconstruction Finance Corporation Act, approved June 10, gave the RFC authority to organize corporations to produce, manufacture, and deal in strategic and critical materials essential to national defense. It might acquire railroad equipment, rolling stock, and commercial aircraft facilities.

War Declaration against Germany, signed December 11

War Declaration against Italy, signed December 11

Congressional Investigations. The Temporary National Economic Committee, after two years and nine months of work, made a report suggesting national charters for corporations doing business on a national scale; effective and thorough enforcement of the anti-trust laws; encouragement of new business and small enterprise by revision of the tax laws; and a national conference of representatives of business, labor, agriculture, and consumers to concentrate public thought on specific objectivities.

The motion picture and the radio were the subject of senatorial attack. However, the subcommittee which scrutinized their alleged interventionist activities was no ordinary Senatorial investigating committee. No senatorial vote authorized its work. Set up by isolationist Senator Wheeler, in his capacity as chairman of the Interstate Commerce Committee, and supported by other isolationists, it held hearings supposedly to determine whether an investigation should be made. It encountered general ridicule, and had reached no conclusions when the Japanese blow made its existence absurd.

A committee to investigate the eastern seaboard oil shortage, headed by Senator Francis T. Mahoney, after hearing testimony for eleven days, reported flatly that there was no oil shortage and recommended that Petroleum Coördinator Harold Ickes drop his order closing filling-stations at night and his 10 per cent cut in deliveries to distributors. Mr. Ickes disagreed, but eventually yielded.

The Senate Elections Committee held hearings on whether or not William Langer of North Dakota, accused of dishonest acts, should be seated. Senator Byrd was chairman of a committee to investigate nonessential government spending. National defense was naturally one of the most fertile subjects of congressional inquiry. Both the House of Representatives and the Senate had committees investigating alleged corruption and bribery in the awarding of defense contracts. A House committee under the chairmanship of Representative Tolan investigated workers' migration as connected with national defense. In December the House approved a resolution erecting a committee to investigate the problems of small business growing out of the defense emergency. A similar committee was active in the Senate under James E. Murray of Montana, who declared at the end of the year that priority-rulings threatened 10,000 or more firms with extinction within ninety days, and that remedies must be provided by research, education, and new laws. The Anti-Trust Division of the Department of Justice, under Thurman Arnold, was also busy with plans to protect both small businesses and consumers from the monopolistic or semi-monopolistic practices fostered by previous wars.

Representative Martin Dies and his congressional committee investigating un-American activities continued to be much in the news. In February, the House of Representatives voted to extend the Dies Committee for fifteen months. Mr. Dies continued to attack Communists and other radicals, particularly in government office. He gave his warm approval to a bill for the registration of all members of the Communist Party and the German-American Bund as agents of foreign governments. See COMMUNISM; FASCISM.

When James Byrnes left the Senate to become associate justice of the Supreme Court, W. F. George gave up his post as chairman of the Foreign Relations Committee to become chairman of

ogized to Wheeler. On July 3, four days before Roosevelt announced the presence of United States troops in Iceland, Senator Wheeler told newspapermen that he had been reliably informed that the United States was going to take over that island. The President accused Wheeler of jeopardizing the lives of the men engaged in this action by his premature announcement. Early in the year the President, stung by Charles A. Lindbergh's isolationist speeches, compared him to the defeatist copperheads of Civil War days, with the result that Lindbergh resigned his army commission.

Congress, as usual, functioned as a sounding board for all phases of public opinion, ranging in foreign affairs from the extreme isolationist to the extreme interventionist standpoint. In the debates on the lend-lease legislation and the amendment of the Neutrality Act excitement ran high, and impassioned speeches were delivered before packed Senate and House galleries. Unmoved either by applause or denunciation, the President quietly took the measure of public opinion, and plotted his course somewhere between the extremes of opinion—a course that never lacked firmness, and that when the war began gave the country a greater degree of unity than it had possessed in 1917.

ALLAN NEVINS (with EDWARD SAWETH).

UNIVERSALISTS. A religious denomination which holds as part of its doctrine the universal fatherhood of God and brotherhood of man. Headquarters, 16 Beacon St., Boston, Mass. See RELIGIOUS ORGANIZATIONS.

UNIVERSITIES AND COLLEGES. According to the *Educational Directory* published by the U.S. Office of Education, there were 1,699 institutions devoted to higher education in the United States in 1941. The distribution of these institutions by type, student body, and control is shown in the accompanying table:

the highly important Finance Committee. Senator Tom Connally of Texas replaced him as head of the Foreign Relations Committee. The death of Senator Shepard of Texas brought Senator Reynolds of North Carolina to the chairmanship of the Military Affairs Committee.

The President and Congress. The administration had several sharp brushes with members of Congress. Secretary of War Stimson used the word "treason" in accusing Senator Wheeler of using his frank for the purpose of sending isolationist literature to men in army camps. A few days later Stimson apol-

According to the American Association of Junior Colleges, the number of junior colleges reported Jan. 1, 1942, was 627 with an enrollment of 267,000 students. The enrollment has more than doubled in the past five years. Somewhat less than half of the institutions are publicly controlled but they enroll almost three-fourths of the students. Of the 348 privately controlled junior colleges, slightly more than half are operated under denominational auspices, the Catholics leading with 48 junior colleges, followed by the Baptists with 42, and the Methodists with 39. Twenty-eight of the

* Degree granting privileges were gained subsequent to the date of founding, which accounts for the relatively small total.

† In the absence of a later report from the institution, figures have been taken from *American Universities and Colleges*, published by the American Council on Education in 1940.

‡ Acting president.

§ Includes the Atlanta University School of Social Science.

¶ In affiliation with Atlanta University.

‡ Statistics include Marycrest College.

§ Stated under the University of Louisville.

¶ Approximately 400 members of Harvard faculty on part time.

‡ Records lost prior to 1850.

§ Included under Rutgers University.

¶ Includes Barnard College and Teachers College except in amount of student aid.

‡ Included under Hobart College.

§ Records lost prior to 1925.

¶ All data apply to the school year 1939-40.

existing junior colleges are exclusively for Negro students, one for Indians. Of the privately controlled group, 39 are for men, 113 for women, and 196 coeducational. All but three of the publicly controlled institutions are coeducational. California has a position of outstanding leadership with 61 junior colleges and 109,000 students. Los Angeles City College is the largest junior college in the country in terms of full-time regular students, numbering 7,400. Sacramento Junior College, California, has 14,000 students, 11,000 of whom are adults in the community taking special part-time work. Increasing attention is being given to the development of so-called terminal courses on the semiprofessional level designed better to prepare students for remunerative employment and for constructive citizenship.

The table (p. 686-707) lists the accredited colleges and universities of the United States with statistics supplied by the institutions for the academic year 1940-41 (unless otherwise noted in footnotes). The list includes those institutions which are accredited (according to the 1941 *Educational Directory*) by one of the seven national or regional accrediting associations, namely the Association of American Universities (national), the New England, Middle States, North Central, Southern, and Northwest Associations of Colleges and Secondary Schools (regional), and the American Association of Teachers Colleges (national).

For comment on enrollments for the 1941-42 school year, see EDUCATION. See also the section on *Education* under the various countries. See DENTISTRY; FAIRS, EXPOSITIONS, AND CELEBRATIONS; ROMAN CATHOLIC CHURCH. For donations and grants, see PHILANTHROPY; CARNEGIE ENDOWMENTS, GENERAL EDUCATION BOARD; ROCKEFELLER FOUNDATION.

URUGUAY. A South American republic. Capital, Montevideo.

Area and Population. Area, 72,153 square miles; population, estimated at 2,146,545 on Jan. 1, 1940. The inhabitants are almost entirely of European descent, with Spanish, Italian, and Portuguese strains predominating. The language is Spanish. During 1940 2,291 foreigners entered the country from overseas and 1,390 departed. The population of Montevideo, with suburbs, was estimated at 770,000 in 1941. Paysandú had about 40,000 in 1940; Salto, 35,000; Mercedes, 24,000.

Defense. A bill for the establishment of compulsory military training was passed in July, 1940. As of Nov. 1, 1940, the active army totaled 8,093 men, the air force 463, and trained army reserves 26,300. During 1940 some 70,000 men registered for voluntary military training. There were about 5,000 men in the police force. The navy consisted of 1 old torpedo gunboat, 1 survey ship, 3 patrol vessels, and a few minor craft. See *History*.

Education and Religion. Although primary education is both compulsory and free, nearly 35 per cent of the adult population remains illiterate. Primary enrollment in 1940 was 191,261 pupils in 1,561 public schools, about 21,000 pupils in over 170 private schools, and 9,785 in courses for adults in 65 public schools. There were about 16,500 pupils in secondary schools, 470 students in normal schools, and nearly 20,000 students in the University of the Republic in Montevideo. The majority of the people profess the Roman Catholic faith, but there is complete religious freedom and no state church.

Production. Processing and manufacturing industries normally account for about 59 per cent of the

total value of national production, pastoral industries for 24 per cent, and agriculture for about 12 per cent. Leading manufacturing lines, in order of value of production in 1936, are meat packing, flour mills, bakeries, electric plants, building construction, distilleries, wineries, woolen mills, tobacco products. At the 1937 livestock census there were 8,296,890 cattle, 17,931,327 sheep, 600,000 horses, and 308,000 swine. Animal products account for over 90 per cent of all exports (wool for 49.1 per cent in 1940). Wool exports for the 1940-41 season totaled 117,269 bales, of which 103,379 went to the United States. Estimated yields of the chief crops in 1940-41 were (in metric tons): Wheat, 173,437, flaxseed, 66,977; oats, 31,517, barley, 9,092; canary seed, 585. Corn, rice, and potatoes are widely grown.

Foreign Trade. Imports in 1940 totaled 74,773,000 pesos (65,364,000 in 1939), exports, 110,473,000 (101,366,000 in 1939). Values of the principal 1940 exports were (in pesos): Wool, 54,289,483; meats and extracts, 24,357,391, hides and skins, 10,033,342; flaxseed, 7,433,996, live animals, 5,043,304. The United Kingdom supplied 18.5 per cent of the 1940 imports (18.2 in 1939), United States, 16.3 (5.2); Argentina, 13.5 (6.7), Germany, 1.4 (16.8). Of the 1940 exports, the United States took 25.8 per cent (13.9 in 1939); United Kingdom, 20.8 (18.5), Germany, 2.0 (12.1).

Finance. Budget estimates for 1941 were: Receipts, 100,326,000 pesos, expenditures, 105,164,000. In 1940 actual receipts were 95,443,164 pesos (preliminary) and expenditures 101,011,377 pesos. As a result of loan issues to cover successive budget deficits and other requirements, the national consolidated debt increased from 350,170,089 pesos on Dec. 31, 1938, to 410,949,851 pesos on Dec. 31, 1940. There was in addition a floating debt of 19,138,418 pesos on Dec. 31, 1940. Average exchange rates of the peso in 1940 were: Free, \$0.3755 (\$0.3626 in 1939), controlled free, \$0 5267 (\$0.4995 in 1939).

Transportation. In 1941 there were about 1,900 miles of standard-gauge railway lines open for traffic, 22,487 miles of roads including some 1,500 miles of good paved highways (see ROADS AND STREETS), air lines linking Montevideo with the other chief cities of Uruguay and North and South America, and an extensive network of navigable waterways. Commercial air routes in 1940 covered 1,313 miles within Uruguay. During 1939, 1,026 ocean-going vessels and 943 river steamers entered Uruguayan ports. The Uruguayan merchant marine on July 1, 1939, consisted of 247 vessels with a gross tonnage of 35,952.

Government. The Constitution of May 18, 1934, vested executive power in a President aided by a Council of Ministers, and legislative power in a Senate of 30 and a Chamber of Deputies of 99 members, elected by popular male and female suffrage for four years. The Senate seats were divided equally between the two political parties receiving the highest number of votes in a presidential election. The legislators proclaimed as President for four years the candidate chosen by the voters from the political party polling the highest vote. His cabinet of nine members was selected from the two strongest parties. President in 1941, Gen. Alfredo Baldomir (Colorado party), who assumed office June 19, 1938. His cabinet contained six Colorados and three Blancos. The composition of the Chamber elected Mar. 27, 1938, was: Colorados, 64; Blancos (Herreristas), 29; Socialists, 3; Catholics, 2; Communists, 1. In the Senate there were 15 Colorados and 15 Blancos.

HISTORY

Internal Politics. The determination of Uruguay's role in the world conflict between the Axis and anti-Axis powers was the major preoccupation of the republic during 1941. The Government and the great majority of the Uruguayan people supported the democratic cause and favored active collaboration with the United States and Great Britain. But they were obstructed in carrying this policy into effect by the active opposition of a pro-Axis minority, whose principal spokesman was Senator Luis Alberto de Herrera, leader of the official Blanco, or National Herrerista, party. Due to the peculiarities of the 1934 Constitution (see above under *Government*), the Blancos held a more or less effective veto power over the Government's program in both foreign and domestic affairs.

The internal political crisis that developed in 1940 as a result of Herrerista opposition to the development of inter-American defense bases in Uruguay with United States aid (see *YEAR BOOK* for 1940, p. 788 f.) appeared to have ended on Jan. 1, 1941. It was then announced that the Herrerista party had withdrawn its opposition to the construction of defense bases and that as a result the three Herrerista members would remain in the Cabinet. President Baldomir's constitutional reform bill, designed to rid the Government of the Herreristas, was shelved. On January 2 the Herrerista party caucus voted to support the President's program for naval and air bases within the Pan American defense system, provided that the whole question be reviewed with each step taken toward construction of the bases.

The political truce proved short-lived. The Herreristas continued to obstruct the Baldomir defense program and other Government measures in Congress. President Baldomir finally lost patience when Senator Herrera led a combination of minority Deputies in defeating the Government's candidate for President of the Chamber. The three Herrerista members of the Cabinet were forced to resign March 18 and their Ministries were entrusted to three of the five remaining Cabinet officers.

Herrera's followers raised an outcry against this action. Under the Constitution they were entitled to three Cabinet places. Accordingly Baldomir on April 5 appointed three new Herreristas to the Cabinet, selecting men who were more amenable to his leadership. At the same time he resumed his efforts to reform the Constitution so as to end further obstruction. His path was rendered difficult by the fact that the Herreristas, under the 1934 Constitution, held half the seats in the Senate and could count upon the support of a minority faction of Colorado Senators in blocking reform. In June a group of prominent citizens issued a manifesto urging early revision of the charter. Later the President succeeded in assembling all political groups except the Herreristas into a committee which formulated constitutional amendments for submission to the voters at the March, 1942, general election. The election of a new President and a complete new Congress was scheduled for that time.

Anti-Axis Sentiment. The President and his supporters were aided in their political struggle by the steady growth of pro-democratic and anti-Axis sentiment. This turned majority opinion progressively against the Herreristas, who on May 26 had again affirmed their policy of strict Uruguayan neutrality in the world conflict and opposition to the use of Uruguayan defense bases by foreign powers. In November the Herreristas presented a motion in Congress for suspension of the compulsory military

service law, due to go into effect at the beginning of 1942.

Despite desperate legal efforts to secure the release under bond of the eight German Nazis arrested in 1940 in connection with a revolt (see preceding *YEAR BOOK*), they were held in jail awaiting trial throughout 1941. The Government on February 14 closed three private German schools in Paysandú Department for alleged pro-Nazi teaching. Pro-democratic Uruguayans were aroused by provocative Nazi propaganda against the Government's defense-base program and by the publication in Montevideo on May 31 of the country's first pro-Axis newspaper, *La Libertad*.

A wave of anti-Axis demonstrations swept the republic after Italian Fascists attending an Italian Red Cross gathering in Durazno, near the capital, on June 29 fired pistols at a crowd of jeering, stone-throwing students and other anti-Fascist demonstrators, killing two persons and wounding eight. The police arrested 20 persons, including an Italian vice consul and an Italian Army captain. One of the persons killed was a 70-year-old school teacher, Gregorio Morales. A nation-wide protest strike was called by the General Council of University Students, which demanded the ousting of pro-Nazi, Fascist, and Falangist professors from the universities, the expulsion from Congress of Deputy Alejandro Kayel, publisher of the pro-Nazi newspaper *La Libertad*, and the suspension of all Nazi newspapers "constituting a threat to national sovereignty." Anti-Axis rioting continued for several days, assuming serious proportions in the town of Trinidad where troops had to use sabers to disperse 300 persons attacking an Italian-owned restaurant.

The Cabinet on July 1 decided on new legislation for the repression of totalitarian activities. The Chamber of Deputies suspended Kayel by unanimous vote July 30 because of his newspaper's attacks on the Government and its supporters in Congress. On August 13 Kayel announced that the newspaper would be suspended "for economic reasons," thus forestalling impending Congressional action. In August the Minister of Interior recommended the closing of the *Fundación Española*, which was considered an agency of the Spanish Falange. Rejecting an Italian protest, the Government on September 11 expropriated two Italian and two Danish steamships that were lying idle in Montevideo harbor. They were placed in inter-American trade to relieve a severe shipping shortage.

A renewal of the Congressional investigation of 1940 into Nazi and other totalitarian activities in Uruguay was authorized by the Chamber of Deputies October 8 after hearing secret testimony. A permanent committee was appointed for this purpose, with authority to investigate Government departments, the army, and the police. The committee reported on December 30 that a raid on a Fascist headquarters in the capital the previous day revealed a Fascist military organization taking orders from Rome.

Collaboration with United States. The widening of the breach between Uruguay and the Axis powers was accompanied by progressively close Uruguayan cooperation with the United States. By an agreement announced January 11, the two republics agreed to exchange Ambassadors instead of Ministers. William Dawson, the first U.S. Ambassador to Montevideo, presented his credentials July 12. On May 20 a Uruguayan military and naval mission arrived in the United States to buy arms, planes, and other war equipment in connection with the Government's defense program.

The Uruguayan Congress appropriated 7,500,-

000 pesos to initiate the arms-purchase program and the Government proceeded with the preliminaries of constructing an arms and munitions factory, a civil and military airdrome, and a naval base. Actual execution of the program, however, depended upon the financial and technical cooperation of the United States, which had been offered in 1940. Despite internal opposition offered by the Herreristas, agreement on the terms of this cooperation were finally reached. On August 19 the Baldomir Government formally accepted an offer of the Export-Import Bank of Washington to extend a \$17,000,000 arms credit on extremely liberal terms to Uruguay. (The report that a \$7,500,000 loan of this nature was obtained from the Import-Export Bank in December, 1940, proved premature.) The Chamber of Deputies authorized acceptance of the arms credit by a large majority October 22. The bill then went to the Senate.

Previously the Government had demonstrated its readiness to permit United States forces to use Uruguayan ports and other facilities if they became involved in the war. On June 20 the Baldomir Cabinet submitted to all the other American republics a plan for treating as a non-belligerent an American country at war with a non-American power. This program won wide acceptance, except in Argentina. The two countries drew closer together economically through a great increase in mutual trade, and in May the U.S. Government gave formal notice of its intention to renew the negotiations for a reciprocal trade agreement with Uruguay that broke down in 1940.

The Japanese attack of December 7-8 upon the United States aroused general indignation in Uruguay. In a decree issued December 9 the Government condemned the attack and declared it an act of aggression upon all American states under Resolution XV of the Havana Conference of 1940. The decree affirmed the solidarity of Uruguay with the United States and stated that the Uruguayan Government would not treat the United States as a belligerent. On December 12 another decree froze German and Japanese credits and prohibited commercial activity in Uruguay by Axis nationals or governments. The Colorado party, controlling the Chamber of Deputies, announced on December 9 that it favored a declaration of war on Japan. Action on this issue was postponed by the Government pending the conference of Foreign Ministers of the American republics scheduled for early in 1942 (see PAN AMERICANISM).

Other Foreign Relations. Uruguay also tightened its political and economic bonds with neighboring countries, particularly through the conference of countries of the Rio de la Plata basin held in Montevideo beginning January 27 (see REGIONAL CONFERENCE OF THE RIO DE LA PLATA). As a result of this conference, seven agreements for closer commercial, financial, and cultural contacts between Uruguay and Paraguay were signed February 5. On February 7 five agreements of similar nature were concluded by Uruguay and Bolivia. The Uruguayan Government also participated in bilateral negotiations with Argentina and Brazil and in multilateral discussions looking toward closer military and economic collaboration. In mid-October it was announced that the British Government had assented to a new contract providing for the export to Britain during the year ending October, 1942, of 295,000 tons of beef and 5,000 tons of mutton from Uruguay. Prices under the new contract were reported to be 10 per cent higher than those of the previous year.

Economic Measures. Facing a cumulative budget

deficit estimated in October at between 40,000,000 and 50,000,000 pesos, the Government obtained passage early in that month of legislation designed to bring the budget into balance. It was authorized to issue 25,000,000 pesos of 5 per cent internal bonds to cover public works and other pre-1941 commitments. The Government's share of the profits of the Bank of the Republic was applied to current and other fixed expenses. Several additional bond issues were authorized to meet various Government obligations. The Uruguayan peso strengthened noticeably in relation to the dollar toward the end of 1941 as a result of heavy North American purchases of Uruguayan products. By a decree of June 20 the Government's power to curb prices, hoarding, etc., was extended for another eight months. The inability of Germany to deliver equipment ordered for the great Río Negro power and navigation project delayed its completion. As a result, an order for one hydro-electric generator was switched to the United States.

USTACHI. See YUGOSLAVIA under *History*.

UTAH. A mountain State. Area: 84,916 sq. mi., including 2,570 sq. mi. of inland water. Population: (1940 census) 550,310. The urban population comprises 55.5 per cent of the total (U.S. average, 56.5 per cent); non-white population, 1.2 per cent (U.S. average, 10.2), elderly (65 years and over), 5.5 per cent. Utah ranks 10th among the States in area, 40th in population, and 42d in density, with an average of 6.7 persons per square mile. The largest city and capital is Salt Lake City with 149,934 inhabitants. There are 29 counties and four cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Charles H. Skidmore, Superintendent of Public Instruction, there were 137,434 pupils enrolled in the public schools of Utah during the school year 1939-40, 78,394 in elementary schools and 59,040 in secondary schools. Teachers numbered 4,608 and received an annual average salary of \$1,376.19. Total expenditures for the year, including debt service, were \$13,271,541.42.

Transportation. State highway mileage in 1939, including streets under State control, totaled 5,164, of which 4,303 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 143,634; 117,026 were private and commercial automobiles, 661 busses, and 22,234 trucks and tractor trucks. Gross motor-fuel consumption was 107,194,000 gal. Net motor-fuel tax receipts were \$4,056,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$1,227,000.

Railways of all classes extended 2,086 miles (Dec. 31, 1939) .89 per cent of the total mileage in the United States. Class I steam railways (1,769 miles) reported 5,804,938 tons of revenue freight originating in Utah in 1940 and 4,780,164 tons terminating in Utah. There are 26 airports and landing fields in the State (16 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 100 civil aircraft in the State

and 763 airline transport, commercial, and private pilots (645 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,122,200, as compared with 1,080,900 acres in 1940. According to the latest census, there are 25,411 farms, valued at \$154,358,365, averaging 287.4 acres each. Farm population numbered 104,459 or 19.0 per cent of the total. Leading crops, hay, worth \$10,294,000 and producing 1,229,000 tons, and wheat, \$6,113,000, 7,027,000 bu.

Manufacturing. The total value of manufactured products, according to the latest census, was \$167,172,226 (for the year 1939); 560 establishments employed 11,554 wage earners who received \$11,967,762 in wages for the year.

Mineral Production. The leading minerals are: Copper, of which 525,154,000 lb. valued at \$61,443,018 were produced in 1941; gold 347,784 fine oz., \$12,172,440; and silver, 11,203,733 fine oz., \$7,967,099. This constituted increases of 13 per cent for copper, 2 per cent for gold, and 8 per cent for silver, as compared with the preceding year. Other important minerals are: Coal, 3,340,000 short tons valued at \$7,114,000 in 1939 (3,524,000 short tons in 1940); lead, 67,634 short tons, \$6,357,596 (75,688 short tons in 1940). The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$80,221,937 or 1.89 per cent of the total for the United States. Utah ranks 13th among the States in the value of mineral production.

Trade. According to the 1940 census there were 957 wholesale establishments in Utah, employing 6,705 persons, reporting net sales for 1939 of \$194,172,000 and annual pay roll of \$10,358,000. There were 6,372 retail stores with 19,562 employees, reporting sales of \$170,728,000 and pay roll of \$18,743,000. Service establishments numbered 2,387, employing 3,753 persons for \$3,392,000 per year, and reporting a business volume amounting to \$11,416,000. The leading business center of the State is Salt Lake City which reported wholesale sales of \$129,699,000 and retail sales of \$75,831,000. Salt Lake County, including Salt Lake City, is the leading county in the volume of receipts for its service establishments (\$7,280,000).

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Utah was \$15,882,000. Under the Social Security program, financed by Federal funds matching State grants, 14,284 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$26.68 (U.S. average pension, \$21.08); 10,483 dependent children in 4,024 families received average monthly payments of \$41.83 per family (U.S. average, \$32.73); and 183 blind persons received \$26.27 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 4,855 and received \$26.97 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 556 (\$37,000); NYA student work program, 2,238 (\$22,000); NYA out-of-school work program, 1,403 (\$28,000); WPA, 8,425 (\$538,000); other Federal emergency projects, 230 (\$26,000); regular Federal construction projects, 2,511 (\$319,000). The Farm Security Administration certified subsistence payments totaling \$8,000 for the month to 229 cases.

Legislation. The Legislature convenes in regular session on the second Monday of January in odd

years. It is composed of 23 Senators (19 Democrats and 4 Republicans in 1941) and 60 Representatives (44 Democrats and 16 Republicans).

In the 1941 regular session, 323 bills were introduced in the Senate, of which 78 were enacted into law, and 232 in the House, of which 47 were enacted. Most of the enactments, according to the Utah Taxpayers Association, was considered desirable and characterized by "good common sense." Progress toward the reorganization of the State government, in line with recommendations contained in a message from the Governor, constituted the outstanding legislation; a number of reorganization bills which failed to pass in the general session were reconsidered in a special session. Also of special interest were Senate Bills 71 and 72 requiring tests for venereal disease of applicants for marriage and of expectant mothers. The numerous efforts to increase taxation were defeated with two exceptions: a four-cents-per-gallon tax was imposed on Diesel engine fuel used on highways, and a graduated chain-store tax was levied on companies operating ten or more stores in the State.

Finances. Total tax collections in Utah for the fiscal year ending in June, 1941, were \$21,170,000 (1940: \$19,733,000). Total sales amounted to \$9,276,000, including general sales, \$4,542,000, motor fuel, \$4,232,000. Taxes on specific businesses ran to \$644,000, general and selective property, \$4,056,000, unemployment compensation, \$2,865,000. The net income taxes were \$1,754,000.

Cost payments for the operation of general government totaled \$22,097,000 in 1939, the latest year available. (Revenues for the general government for that year were \$28,237,000.) Cost of operation per capita was \$40.54. Total gross debt outstanding in 1941 was \$2,105,000, as compared with \$11,445,000 in 1932.

Officers and Judiciary. The Governor is Herbert B. Maw (Dem.), inaugurated in January, 1941, for a four-year term; Secretary of State, E. E. Monson; Attorney General, Grover A. Giles; State Treasurer, Oliver G. Ellis; State Auditor, Reese M. Reese. Chief Justice of the Utah Supreme Court is David W. Moffat; there are four associate members elected by popular vote for 10-year terms.

VARIOPLEX SYSTEM. See TELEGRAPHY.

VATICAN CITY. A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929 (see 1929 YEAR BOOK, p. 417). Sovereign in 1941, Pope Pius XII (Eugenio Pacelli), who succeeded Pius XI Mar. 2, 1939.

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The census of 1939 showed 953 inhabitants. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. He delegates administrative authority within Vatican City to a governor (Marquis Camillo Serafini), who is assisted by a counselor general and

other officials. The legal system is based on canon law and ecclesiastical rules. The chief advisers of the Pope are the 70 members of the College of Cardinals, who are appointed by him for life and elect his successor upon his death. From Vatican City the 11 committees forming the Curia Romana carry on the central administration of the Roman Catholic Church. Relations between the Church and the governments of the world are conducted by the Papal Secretary of State (Luigi Cardinal Maglione was appointed to this office Mar. 11, 1939). The Holy See maintains diplomatic relations with 35 governments and has unofficial relations by means of Apostolic Delegates with a number of other countries, including the United States.

See ITALY and SPAIN under *History*; ROMAN CATHOLIC CHURCH; UNITED STATES under *Foreign Affairs*.

VEGETABLES. See HORTICULTURE.

VENEZUELA. A republic of South America, consisting of a Federal District, 20 States, and two Territories. Capital, Caracas.

Area and Population. Area, 352,143 square miles; population, 3,491,159 at December, 1936, census (1941 census, 3,942,747, preliminary). There are whites, Indians, Negroes, and mixtures of all three races. Immigrants exceeded emigrants by 600 in 1940 (2,608 in 1939). Populations of the capital and five largest State capitals in 1937 were: Caracas (Federal District), 203,342; Maracaibo (State of Zulia), 110,010; Barquisimeto (Lara), 50,774; Valencia (Carabobo), 49,963; Maracay (Aragua), 29,255; and San Cristóbal (Tachira), 22,058.

Defense. As of Nov. 1, 1940, the active army numbered 11,000 men; trained army reserves, 7,500; active air force, 373. The navy comprised 6 gunboats and patrol vessels and several auxiliary craft. The defense appropriation for 1940-41 was 39,911,000 bolivares. Under an agreement signed Mar. 24, 1941, a United States naval mission of six officers was engaged to advise the Venezuelan navy for four years.

Education and Religion. At the 1926 census, about 57 per cent of the adult population were illiterate. Out of an estimated school-age population of 720,000 in 1939, 295,462, or 41 per cent, were registered in classes, as against 19.9 per cent of the school-age population in 1936. There were 4,142 public primary schools (1938) with 234,024 pupils; 65 secondary and special schools, with 3,705 pupils; and three universities, with 2,125 students. Roman Catholicism is the predominant religion.

Production. The principal industries are agriculture, stock raising, petroleum mining, manufacturing, pearl fishing, and forestry. Production of coffee in 1940-41 was 112,000,000 lb.; of other crops (in metric tons): Cacao (exports), 15,378 in 1939; cane sugar, 24,000 in 1939-40. Tobacco, cotton, corn, beans, fruits, potatoes, coconuts, rice, and wheat are other leading crops. Petroleum production declined from 30,533,706 metric tons in 1939 to 27,443,001 in 1940 but Venezuela retained third place among the world's producers. Oil refined in Venezuela increased from 1,344,573 metric tons in 1935 to 3,987,593 in 1940. The 1940 gold output was 4,565 kilograms; diamonds, 14,525 carats; cement, 87,062 metric tons. Some salt, copper, coal, iron, tin, and asbestos are mined. The forests yield balata, tonka beans, divi-divi, vanilla, etc. According to the census of national wealth of 1936-37, total capitalization of all economic enterprises was 3,523,000,000 bolivares, divided as follows: Petroleum activities, 1,109,000,000 (31.48 per cent);

agriculture, 1,000,000,000 (28.38); commercial and service enterprises, 616,000,000 (17.48); cattle, 500,000,000 (14.19); industry, 298,000,000 (8.46).

Foreign Trade. Imports were valued at 311,182,000 bolivares in 1940 (326,393,000 in 1939); exports, 860,909,000 (953,337,000 in 1939). Petroleum and its products accounted for 94 per cent of all the 1940 exports. The other chief exports were coffee, 18,653,795 bolivares; uncoined gold, 16,785,763; cacao, 8,528,321. The United States furnished 73.7 per cent of the 1940 imports (61.1 in 1939); Great Britain, 7.6 (6.2); Germany, 0.4 (9.5). Of the 1940 exports, 34.6 per cent went to Aruba (37.4 per cent in 1939); 32.0 to Curaçao (34.4); and 22.6 to the United States (15.8). Shipments to Aruba and Curaçao all represented crude oil for refining. See TRADE, FOREIGN.

Finance. Actual budget receipts for the fiscal year ended June 30, 1940, were 353,548,000 bolivares; expenditures, 382,490,000 bolivares. Original budget estimates for 1940-41 balanced at 344,515,000 bolivares but expenditures were subsequently reduced by 33,000,000 bolivares. For 1941-42, revenues were estimated at 303,535,000 and expenditures at 302,594,000 bolivares. The public debt was completely liquidated in 1935. On Jan. 1, 1939, there was an internal indebtedness of 2,648,968 bolivares. As of Mar. 31, 1941, Venezuela had utilized credits of \$183,000 advanced by the Export-Import Bank of Washington and the Bank was committed to make additional loans of \$3,417,000. The controlled exchange rate of the bolivar was \$0.3135 in 1939 and 1940; uncontrolled, \$0.2890 in 1940 (\$0.3115 in 1939). By a decree of July 23, 1941, the rate of exchange was fixed at 3.35 instead of 3.19 bolivares to the dollar.

Transportation. The railways, with 589 miles of common carrier line, carried 426,327 metric tons of freight in 1940, their receipts totaled 7,660,000 and expenditures 6,971,000 bolivares. The 1940 road mileage was 5,882 (see ROADS AND STREETS). The government-owned airways system, with over 2,560 miles of route, carried 118,459 lb. of air mail in 1940; its receipts were 2,058,300 bolivares and expenditures 1,195,700 bolivares. The Royal Dutch Airways system connects the coastal cities with Aruba and Curaçao while Pan American Airways provides service between all of the chief coastal cities and other parts of the hemisphere. The principal ports are La Guaira and Puerto Cabello.

Government. The Constitution of July 11, 1936, vests executive powers in a President elected by Congress for five years and ineligible for reelection. There is a Senate of 40 members chosen by the State legislatures and a Chamber of Deputies of 87 members elected by municipal councils. The State legislatures and municipal councils are elected by direct ballot of literate males 21 or more years of age. The Constitution prohibits communism and anarchism. For the 1941 Presidential election, see *History*.

HISTORY

New President Elected. The Venezuelan Congress on Apr. 28, 1941, elected Gen. Isaías Medina Angarita to succeed President Eleázar López Contreras for the five-year term beginning May 5, 1941. General Medina, who resigned his post as Minister of War under President López Contreras to run for the Presidency, obtained 120 votes against 13 for Rómulo Gallegos, head of the Caracas municipal council, noted novelist, and former Minister of Education; 2 for Diógenes Escalante, Venezuelan Ambassador to Washington; and 1 each for Luis Gerónimo Pietri and José Izquierdo. The retirement of President López

Contreras at the end of his first Presidential term was another step in fulfillment of his promise to restore constitutional, democratic processes of government as rapidly as possible after 26 years of dictatorial rule by the late President Juan Vicente Gómez.

Adherents of López Contreras made every effort to induce him to reconsider his decision not to accept a second term, which was barred by the Constitution. Candidates supporting his Government won an overwhelming victory on January 30 when half the Lower House of Congress was renewed. Forty-seven Deputies were elected by newly chosen State Legislatures in 20 States and the Federal District. This encouraged supporters of a second term for López Contreras to seek a Supreme Court decision, based on a legal loophole in the Constitution, permitting his continuance in office. The President repudiated this campaign on March 5 by addressing telegrams to the presidents of the States announcing his "frank resolution not to favor or accept constitutional reforms" of this nature. General Medina then announced his candidacy (March 14).

During the campaign Gallegos advanced a demand for direct election of the President, thus increasing his popularity with labor and liberal groups. All candidates campaigned with what appeared to be complete freedom until April 21, when the retiring President induced the two leading aspirants—Medina and Gallegos—to end their campaign activities and permit Congress to choose a new executive undisturbed by political propaganda. The election of Medina was generally conceded in advance of the balloting.

Medina Administration. The new President, with the support of his popular predecessor, proceeded to carry forward the liberal and tolerant policies of López Contreras. His Cabinet, announced May 6, included only three Ministers who had served under López Contreras. A Cabinet shake-up took place for unexplained reasons November 22. The Ministers of Agriculture and of Labor and Communications were replaced. At the same time President Medina appointed new presidents for a number of States. On May 3 Congress elected seven justices of the Supreme Court, including two holdovers, to serve until 1946.

Besides the maintenance of internal order, the main problems confronting the administration were the economic development of the country, cushioning the national economy against adverse repercussions of the World War, and the determination of Venezuela's course with respect to that rapidly widening conflict.

Economic Developments. The decline in oil sales that caused curtailment of production and adverse effects in other fields of activity late in 1940 was sharply reversed during 1941. Larger purchases by the United States and a shift in British and Canadian purchases to Venezuela caused a rise in petroleum output to near the record 1939 level. This brought a general improvement in economic conditions and in the budget situation. The acute shortage of dollar exchange, that led the Central Bank to obtain a \$10,000,000 credit from the National City Bank of New York late in 1940, was replaced by an abundance.

A flood of new orders were placed for United States manufactures and other products but many of them could not be filled because of the priorities and shipping crises. Another disturbing factor was the elimination of European markets for Venezuelan coffee and other products, thus increasing the republic's dependence upon the oil industry.

Petroleum exports by the middle of 1941 accounted for some 94 per cent of all Venezuela's dollar exchange. The Government sought to remedy this situation by pressing forward with the program evolved by President López Contreras for stimulating agricultural and dairy production, cattle-raising, and industrial activity.

The importance attached to economic problems was indicated by the legislation enacted by the ordinary session of Congress that ended July 17. Laws were passed relating to labor, civil aviation, navigation, coinage, pastoral fencing, public credit, and the holding of an electoral census and elections Amendments to the Banking Law, the Organic Law of Liquor Revenue, and the Organic Law of the National Treasury were authorized. The Government also concluded a trade agreement with Canada and opened negotiations for similar accords with a number of the other Latin American countries.

Foreign Relations. President Medina, who had toured United States defense establishments in 1940, continued the firm support of the policy of inter-American solidarity and continental defense that had marked the López Contreras administration. This course brought Venezuela into still closer relations with the United States and into conflict with the Axis powers.

On the night of March 31 one German and three Italian ships lying in the harbor of Puerto Cabello were fired and destroyed by their crews to prevent their seizure by the Venezuelan Government. The port authorities frustrated efforts to burn and scuttle three other Italian ships. The incident touched off anti-Axis demonstrations in the city and martial law was declared for some hours until order was restored. About 36 German and 300 Italian sailors were arrested and interned for violating the country's neutrality laws. On April 4 a German freighter was seized in Maracaibo harbor.

On April 25 the head of the new U.S. naval mission arrived in Venezuela to take over the work formerly performed by an Italian mission, which was dismissed when Italy entered the war (see above under *Defense*). General López Contreras, who was named commander-in-chief of the armed forces after relinquishing the Presidency, was placed in charge of Venezuela's participation in continental defense on August 17. On September 3 he arrived in the United States with a group of army officers for a four-months study of U.S. defense plants and preparations.

Immediately following the announcement of the Japanese attack upon Pearl Harbor on December 7, the Venezuelan Government took extraordinary measures to safeguard petroleum fields, airports, and industrial and military establishments against sabotage. President Medina and his Foreign Minister sent messages of support and solidarity to President Roosevelt and Secretary of State Hull on December 9-10. A decree of December 12 stated that in line with the decisions of the Havana Conference of 1940 (see YEAR BOOK for 1940, p. 579) the Government would not apply its rules of neutrality to any American state at war with non-American powers. This opened Venezuelan ports to the ships of the United States and other American countries at war with the Axis. On the same day all Axis funds were frozen. Suspension of all radio communication facilities with all countries except those of the Western Hemisphere was announced December 27. Diplomatic relations with Germany, Italy and Japan were severed on December 31.

Another important development of the year was

the announcement by President López Contreras on April 19 that an agreement had been reached with Great Britain defining British and Venezuelan interests in the undersea area of the Gulf of Paria and ceding to Venezuela the small island of Patos. Patos, lying within three miles of the Venezuelan coast, had been occupied by Great Britain although claimed by Venezuela. A long controversy between Venezuela and Colombia over their mutual frontier was settled by a treaty signed April 5 (see *COLOMBIA* under *History* for terms). An important arbitration treaty with Brazil was ratified early in the year.

See CANADA and COLOMBIA, under *History*; CHEMISTRY, INDUSTRIAL; LEND-LEASE ADMINISTRATION; NAVAL PROGRESS; PAN AMERICANISM.

VENTILATING. See HEATING AND VENTILATING.

VERMONT. A New England State. Area: 9,609 sq. mi., including 331 sq. mi. of inland water. Population: (1940 census) 359,231. The urban population comprises 34.3 per cent of the total (U.S. average, 56.5 per cent); non-white population, 0.1 per cent (U.S. average, 10.2); elderly (65 years and over), 9.5 per cent. Vermont ranks 42d among the States in area, 45th in population, and 28th in density, with an average of 38.7 persons per square mile. The capital is Montpelier with 8,006 inhabitants; largest city, Burlington, 27,686. There are 14 counties and three cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education conducted by the U.S. Office of Education, there were 67,931 pupils enrolled in the State School System of Vermont during the school year 1937-38. The instructional staff comprised 2,749 persons, who received an annual average salary of \$952 (U.S. average: \$1,374); 277 or 10.8 per cent were men. Expenditures for all public schools in 1937-38 were \$4,930,089, making a total cost per capita of \$12.77 (U.S. average: \$17.15). For higher education, see under *Vermont* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 1,756, of which all was surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 94,472; 83,922 were private and commercial automobiles, 95 busses, and 9,628 trucks and tractor trucks. Gross motor-fuel consumption was 70,806,000 gal. Net motor-fuel tax receipts were \$2,781,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$2,625,000.

Railways of all classes extended 919 miles (Dec. 31, 1939) .39 per cent of the total mileage in the United States. Class I steam railways accounted for 481 miles. There are 12 airports and landing fields in the State (one lighted field) and three seaplane anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 69 civil aircraft in the State and 287 commercial and private pilots (255 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,048,000, as compared with 1,062,000 acres in 1940. According to the latest census, there are 23,582 farms, valued at \$111,108,534, averaging 155.5 acres each. Farm population numbered 107,066 or 29.8 per cent of the total. The leading crop was hay, worth \$14,360,000 and producing 968,000 tons.

Manufacturing. According to the latest census, the

total value of manufactured products was \$103,154,301 (for the year 1939); 717 establishments employed 21,759 wage earners who received \$21,232,355 in wages for the year.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$6,972,234 or only .16 per cent of the total for the United States. Leading items were stone and slate.

Trade. According to the 1940 census there were 383 wholesale establishments in Vermont, employing 2,354 persons, reporting net sales for 1939 of \$57,112,000 and annual pay roll of \$3,434,000. There were 5,423 retail stores with 12,010 employees, reporting sales of \$123,369,000 and pay roll of \$10,707,000. Service establishments numbered 1,785, employing 1,544 persons for \$1,239,000 per year, and reporting a business volume amounting to \$5,982,000. The leading business center of the State is Burlington which reported wholesale sales of \$14,251,000 and retail sales amounting to \$16,886,000.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Vermont was \$5,049,000. Under the Social Security program, financed by Federal funds matching State grants, 5,775 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$16.89 (U.S. average pension, \$21.08); 1,693 dependent children in 613 families received average monthly payments of \$32.69 per family (U.S. average, \$32.73); and 158 blind persons received \$21.87 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 1,599 and received \$16.95 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 161 (\$11,000); NYA student work program, 1,038 (\$7,000); NYA out-of-school work program, 780 (\$17,000); WPA, 2,662 (\$169,000); regular Federal construction projects, 465 (\$53,000). The Farm Security Administration certified subsistence payments totaling \$1,000 for the month to 34 cases.

Legislation. The General Assembly convenes in regular session on Wednesday after the first Monday of January in odd years. It is composed of 30 Senators (22 Republicans and 8 Democrats in 1941) and 246 Representatives (197 Republicans, 37 Democrats, 12 others).

The Legislature met in regular session for 93 days in 1941, enacting a record-breaking total of \$22,341,000 in appropriations. The following account of important enactments is condensed from the *Burlington Free Press and Times*, Apr. 11, 1941.

While the legislature of 1941 will be remembered by many as the assembly which repealed the bonus law, substituting provisions for State pay of Vermont soldiers only in case of war, it was chiefly notable for the large volume of funds voted simultaneously with reductions in taxes totaling \$832,000 for the coming biennium.

Repeal of the pinball machine law, effective Sept. 30, 1941, will cost the State about \$92,000 in the next two years. Revision of income tax exemptions for taxpayers in the low unearned income class will reduce State revenue by an estimated \$10,000 to \$15,000 annually. A reduction in the tax rate on bank deposits will cost another \$100,000 a year, and amendments to the cigarette tax law about \$5,000 more annually. The State treasury surplus and rising revenues are expected to offset these tax reductions.

The critical world situation and allied defense problems in this country resulted in action by the legislature. In addition to overhauling of the soldiers' bonus law, uniform acts on control of sabotage and the handling of explosives were passed, and legislation was enacted to provide for establishment of the State guard to replace the national guard while in federal service. Five laws were

passed which were designed to protect rights of men who have gone or are going into military service.

Stemming partly from the same source, legislation was approved appropriating \$65,000 for State aid to municipalities in purchasing land for airports, and establishing a State aeronautics board with a \$3,000 annual appropriation to promote aviation. It was the first step taken toward state ownership of airports. Establishment of the new State office of industrial agent, became tied up with the defense situation when authorization of the office was urged as an aid to Vermont participation in the growing volume of industrial production for defense.

The 1941 general assembly was liberal in other ways, however. It approved amendments to the State unemployment compensation act which will mean more benefits for unemployed, through shortening the waiting period and increasing the maximum benefits payable. It enacted changes in the workmen's compensation act relating to death benefits and medical and hospital benefits which will further relieve the injured employee and his dependents. Divorce laws were liberalized by softening the harsh terms of intolerable severity, and by adding a new ground which is equivalent to mutual consent after three years' separation.

Following years of squabbling between the utilities, exponents of public power and municipalities, the legislature finally approved a general enabling act which will permit any municipality in the State to buy or to construct a power plant following approval by 60 per cent of those voting at a meeting attended by a quorum of 80 per cent of the legal voters of the municipality.

The policy of tax relief for railroads was continued. The legislature gave the old age assistance department an increase of \$75,000 over the previous biennium. A new Bang's disease control program was adopted with a \$100,000 appropriation. An act was passed to establish a State safety commission to replace the governor's safety council. Three measures were enacted directed at control of venereal diseases, requiring premarital and prenatal blood tests for syphilis, and requiring persons with syphilis to undergo treatment by a physician.

All except one of the major recommendations contained in the inaugural program laid down last January by Gov. William II. Wills were enacted into law by the 1941 legislature. The one exception was his request for establishment of the State office of comptroller.

Mustering strong support, but not sufficient to result in new laws, several controversial measures were rejected by the 1941 legislature which may reappear at future sessions including the "loss leader" bill, the "fair trade" act, the comptroller bill and increased state aid for schools.

There was a special session of the legislature in September which was concerned primarily with the financial condition of the University of Vermont, funds were appropriated for current expenses for the next two years (\$260,000 a year) and a plan for retiring debts within twenty years was set up. Towns and cities were authorized to convey municipal airports to the Federal government.

Finances. Total tax collections in Vermont for the fiscal year ending in June, 1941, were \$12,393,000 (1940: \$11,641,000). Total sales taxes amounted to \$4,392,000, including motor-fuel, \$2,885,000. Taxes on specific businesses ran to \$1,519,000, general and selective property, \$401,000, unemployment compensation, \$1,585,000. The net income taxes were \$914,000. Cost payments for the operation of general government totaled \$10,482,000 in 1939, the latest year available. (Revenues for the general government for that year were \$14,890,000.) Cost of operation per capita was \$29.20. Total gross debt outstanding in 1941 was \$7,807,000 as compared with \$9,545,000 in 1932.

Officers and Judiciary. The Governor is William H. Wills (Rep.), inaugurated in January, 1941, for a two-year term; Lieutenant Governor, Mortimer R. Proctor; Secretary of State, Rawson C. Myrick; Attorney General, Alban J. Parker; State Treasurer, Thomas H. Cave; State Auditor, David V. Anderson. Chief Justice of the Vermont Supreme Court is Sherman R. Moulton; there are four associate members elected by legislature for two-year terms. See **FAIRS, EXPOSITIONS, AND CELEBRATIONS.**

VETERANS' ADMINISTRATION. As of June 30, 1941, there were in force 613,320 U.S. Government life insurance policies representing \$2,567,154,350 of

insurance. Disbursements for this type of insurance during the fiscal year 1941 were \$55,826,658.44. Monthly payments on yearly renewable term insurance policies were being made to 10,205 permanently and totally disabled veterans and the beneficiaries of 8,586 deceased veterans. Monthly payments on automatic insurance policies were being made to 240 disabled veterans and the beneficiaries of 45 deceased veterans. Disbursements for term and automatic insurance during the fiscal year 1941 were \$15,390,559.61. During the period Oct. 8, 1940, to June 30, 1941, 367,923 applications were approved for National Service life insurance aggregating \$1,193,665,500 of insurance. A total of 102 death claims under this type of insurance had been filed and awards made in 43 of these cases approximating \$237,500 in value. As of June 30, 1941, 10,135 applications for insurance benefits under the Civil Relief Act of Oct. 17, 1940, had been received. Of this number 6,718 applications representing \$20,015,076.02 of insurance had been approved.

On June 30, 1941, the total hospital load of the Veterans' Administration was 58,417 patients, of whom 58,160 were United States veterans. Of the United States veterans, 54,598 were in Veterans' Administration facilities, 2,531 in other Government hospitals and 1,031 in State or civil institutions. On the same date, the veteran population in domiciliary status in Veterans' Administration facilities totaled 13,978. In addition to the hospital and domiciliary load, an average of 5,966 veterans was cared for in State or Territorial homes during the fiscal year 1941.

Pension or compensation benefits were, on June 30, 1941, being paid to 618,926 living veterans and to the dependents of 237,515 deceased veterans. The disbursements during the fiscal year 1941, for this purpose, totaled \$433,113,953. The net disbursements made by the Veterans' Administration during the fiscal year ending June 30, 1941, from all appropriations and trust funds (including adjustments on lapsed appropriations) totaled \$614,357,411.24, not including those made from the U.S. Government life insurance funds for investment purposes.

For other discussion of veterans, see **AMERICAN LEGION; CIVIL SERVICE COMMISSION; PSYCHIATRY; PUBLIC HEALTH SERVICE; RED CROSS.**

FRANK T. HINES.

VETERINARY MEDICINE. The country continued free from the ever threatening foot-and-mouth disease, contagious pleuropneumonia, rinderpest, surra, and other contagions of livestock that exact enormous losses in many other countries, despite the changing and complex international situation involving new trade relationships and routes of travel. A continued progress was made in the control and eradication of infectious diseases and parasites existent within the country. In response to the request for a greatly increased production of dairy and poultry products the veterinarians of the country were putting forth every effort to prevent much of the great loss caused by diseases and parasites of livestock.

The declaration of war upon the United States found the Veterinary Corps of the Army prepared to meet the demands placed upon it. Its wartime service includes not only aid in the purchase of and the medical and surgical care of the horses and mules, of which there were about 50,000 at the opening of the war, and the inspection of forage, but also the inspection of meats, meat foods, and dairy products purchased by the army, and the maintenance of laboratories where equine affections

are investigated and diagnostic and protective biologics prepared. The preparation made for defense resulted in an increase of about 400 per cent in the veterinary personnel. Many changes were made in the Army veterinary training program. In recognition of the shortage of veterinarians and the vital importance of the food and livestock industry to national health veterinary students were placed in deferred classes. Those in the military service and those who might be inducted later were authorized to apply for commission in the Veterinary Corps Reserve and if found qualified be commissioned and placed on extended active duty. A food inspection service was established at Chicago in which about 175 officers received training. At the Medical Field Service School at Carlisle Barracks and at the Army Veterinary School in Washington short basic courses were given to meet the present requirements. Schools for training enlisted veterinary personnel were established at Camp Grant and Fort Bliss.

Brucellosis or Bang's Disease Eradication. A continued progress was made in the control and eradication work with Bang's disease of cattle so that by June 30 391 counties in 23 States were practically free and had been designated as modified accredited Bang's disease free areas (see YEAR BOOK 1940). Area work was being conducted in about 200 additional counties with a view to eradication. The approval in December, 1940, of calfhood vaccination as part of the Bang's disease control plan was followed by its adoption by the livestock sanitary authorities in 34 States. In most of these States it is provided that the owner may request to have his calves vaccinated at the proper time and dispose of the nonvaccinated reactors with indemnity in the usual manner, or he may have his calves vaccinated and retain the nonvaccinated reactors under quarantine for an indefinite period, with the understanding that no indemnity will be paid for them. By July 1, approximately 19,400 had been vaccinated under these cooperative plans. Studies of the results of calfhood vaccination in about 250 herds indicated that only slightly more than 1.2 per cent of the vaccinated animals later aborted owing to *Brucella* infection, as revealed by the agglutination blood test. Two of the chief criticisms of calfhood vaccination were met by an experiment completed during the year which showed that the virulence of strain 19 vaccine was not increased by repeated animal passage and that vaccinated animals, under the most favorable conditions, did not spread *Brucella* infection to contact animals.

Equine Encephalomyelitis, Infectious. The 1941 outbreak of equine encephalomyelitis began relatively early, more than 1,000 cases having been reported by June 30, and some 25,000 cases were reported by the close of the year, despite the efficacy of intradermal vaccination with chick-embryo vaccine. (This was an increase from 16,941 cases and 4,187 deaths in 1940.) Early rains and warm weather in the affected areas may have been influential in its early appearance and spread. The situation was complicated by the spread of the eastern type west of the Appalachians and by the discovery that the St. Louis encephalitis of man is transmissible to horses having been implicated in some western outbreaks. Evidence obtained in the Yakima Valley of Washington State in 1940 of the probable presence of both the western equine virus and the St. Louis virus of encephalitis in animal epidemics in man and horses led to an extensive epidemiological survey in 1941. Tests made of the serums of mammals and birds, both domestic and wild, collected principally in areas where cases had occurred resulted

in the detection of the presence of both virus types. The findings indicate that barnyards and fowl runs are the principal foci of infection of the two types. Both the St. Louis and the western equine viruses were isolated from *Culex tarsalis* mosquitoes in the Yakima Valley. In the great central valley of California about 26 per cent of the serums of human encephalitis patients were found positive to both the western equine and St. Louis encephalitis virus types. Antibodies against the St. Louis type were present in the blood of many horses and domestic fowl and usually were in association with antibodies of the western equine virus. It was suggested by the investigators that a common vector or common reservoir may be responsible for both the apparent and unapparent infections. The isolation of the western type virus from the brain and spleen of a prairie chicken in North Dakota while human epidemic cases were occurring in the vicinity was reported. It was demonstrated that some dogs are susceptible to the western type of the virus. An encephalitis in cattle and chickens unrelated in its etiology to equine encephalomyelitis made its appearance in the mid west.

Hog Cholera. Report was made of the first successful cultivation of the causative virus of hog cholera followed by 26 successful transfers. It was demonstrated to be present in large amounts in the culture. The culture virus produced characteristic hog cholera when injected into swine. It is thought that the culture virus is more active than the commonly used virus and that its practical use in hog cholera vaccination and hyperimmunization would result in a considerable saving.

Mastitis, or Garget. Progress was made in the control investigations underway with mastitis of dairy cows, more commonly known as garget. Gramicidin, the name given to a crystalline preparation separated from material isolated from a spore-bearing bacillus, which has been found highly bactericidal for gram-positive microorganisms, was shown to possess a definite destructive effect against *Streptococcus agalactiae* the principal cause of infectious mastitis, when injected directly into an infected focus in the udder. *S. agalactiae* infection was destroyed in 82.7 per cent of the infected quarters of udders of cows injected with novoxil liquid containing 5 per cent silver oxide in a light mineral oil. In control work in four dairy herds, 204 of 237 quarters were freed from *A. agalactiae* infection through one or more treatments with a 1:4,000 acriflavine solution. Experiments with a small number of cows indicated that iodized mineral oil has valuable therapeutic properties as a treatment for chronic bacterial infections of the bovine udder.

Phenothiazine Anthelmintic. Investigations of the newly discovered anthelmintic phenothiazine (YEAR BOOK 1940) confirmed the earlier findings concerning its prospective wide usefulness in removing parasites of livestock. This drug, now manufactured and marketed on a large commercial scale, is particularly useful in removing from domestic animals some of the most injurious internal parasites including stomach worms, hookworms, and nodular worms. It has been found effective also in removing blood-sucking and related strongyles from horses. While it is more effective than other parasiticides for removal of strongyles from horses and mules it may occasionally react unfavorably. Despite this, its administration in 30-gram doses has been found effective in the treatment of strongyles and has been accepted as the standard treatment for their removal from 1,000-lb. horses in the British army. In doses of about 0.2 gram per pound body weight it was reported to have given good results in re-

moving stomach and nodular worms from calves. In experiments with cattle, marked physical improvement followed its administration. In effectiveness phenothiazine was found to compare favorably with oil of chenopodium for removal of mature ascarids from swine and has the additional advantage of being effective for removal of nodular worms. In chickens it has been shown to remove a large percentage of cecal worms.

Therapeutics. Advances in the preparation and uses of sulfonamide drugs were outstanding in the field of therapeutics. They have proved to be of great value in the treatment of coccal infections, particularly through internal administration, and have been used locally in both the prevention against infection and the treatment of infections in superficial tissues and body cavities. Experiments in Louisiana with the coccidiosis of chicks that is due to *Eimeria tenella* revealed sulphur to possess a preventive value but to lack any curative effect. The continuous feeding of sulphur in amounts of 2 per cent by volume of the ration to 3- and 8-weeks-old chicks for a period of 22 and of 44 days respectively proved definitely harmful and this effect was more manifest in the younger than the older birds. Mapharsen was proved to be safe and economical in the treatment of enterohepatitis of the turkey a disease more commonly known as blackhead. The findings indicate that the proper use of this drug will save at least half of the birds when adequate treatment is given within a reasonable time after clinical symptoms appear.

Tick Fever and Cattle Tick Eradication. There was a continued advance in the eradication of the cattle fever tick in Florida, Texas, Puerto Rico, and the Virgin Islands. During the fiscal year ended June 30 12,410,587 inspections or dippings of cattle and 1,117,873 of horses and mules were conducted. In Puerto Rico and the Virgin Islands, where the tropical variety of fever tick *Boophilus annulatus australis* is prevalent, it was necessary to treat the sheep and goats and a few deer on infested premises and 870,882 inspections or dippings of these animals were conducted. The remainder of two counties in Florida and part of one county in Texas with an aggregate area of 886 square miles were released from Federal quarantine. In Texas eight counties remained under quarantine, part of one county aggregating 10 square miles having been re-quarantined. With the release of the eastern one-third of the island covering 945 square miles the entire territory of Puerto Rico was placed in the released area. In the Virgin Islands the islands of St. Thomas and St. John, covering 48 square miles, were released. At the close of the fiscal year ended June 30 the area under Federal quarantine in continental United States had been reduced to slightly less than 1 per cent of its original size. Fever-tick-infested deer continued to present the most troublesome problem in the Big Cypress Swamp area in Collier and Hendry Counties of Florida, and on the Island of St. Croix in the Virgin Islands of the UNITED STATES.

Tuberculosis Eradication, Livestock. Following the practical eradication of bovine tuberculosis, with the infection in the United States reduced to less than one half of 1 per cent at the end of 1940, retesting was continued in order to safeguard the health of herds against possible infection and a new spread of the disease with the view to a complete and permanent eradication. During the fiscal year ended June 30 12,229,499 tuberculin tests were applied to cattle of which 0.3 per cent reacted, the lowest since the commencement of the eradication project in 1917.

Bibliography. Among the publications of the year were: M. H. Clarke, *First Aid to Dogs and Cats* (London and Baltimore); J. T. Culbertson, *Immunity Against Animal Parasites* (New York); H. J. Harris, *Brucellosis (Undulant Fever). Clinical and Subclinical* (New York and London); A. T. Henrici, *The Biology of Bacteria: An Introduction to General Microbiology* (Boston and London); R. G. Hoskins, *Endocrinology: The Glands and their Functions* (New York); T. G. Hull, *Diseases Transmitted from Animals to Man* (Springfield, Ill., 2d ed.); R. A. Runnels, *Animal Pathology* (Ames, Ia., 2d ed.)

VIRGINIA. A south Atlantic State. Area: 40,815 sq. mi., including 916 sq. mi. of inland water, but excluding part of Chesapeake Bay, 1,511 sq. mi. Population: (1940 census) 2,677,773. The urban population comprises 35.3 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 24.8 per cent (U.S. average, 10.2); elderly (65 years and over), 5.7 per cent. Virginia ranks 33rd among the States in area, 19th in population, and 17th in density, with an average of 67.1 persons per square mile. The largest city and capital is Richmond with 193,042 inhabitants. There are 100 counties and 15 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to the latest Biennial Survey of Education, there were 583,556 pupils enrolled in the State School System during the school year 1937-38. Of this total, 469,197 were enrolled in kindergartens and elementary schools and 114,359 in secondary schools; 154,330 were in separate Negro schools. The instructional staff comprised 17,795 persons, who received an annual average salary of \$864 (U.S. average: \$1,374); 2,379 or 14.1 per cent were men. Expenditures for all public schools in 1937-38 were \$25,703,757, making a total cost per capita of \$9.36 (U.S. average: \$17.15). There were 4,697 school buildings in the State, of which 2,168 were one-room, one-teacher schools. The value of public property used for school purposes was \$76,666,144. For higher education, see *Virginia* in the table of UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 45,934, of which 30,567 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 509,191; 422,591 were private and commercial automobiles, and 76,247 trucks and tractor trucks. Gross motor-fuel consumption was 417,599,000 gallons. Net motor-fuel tax receipts were \$19,410,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$7,159,000.

Railways of all classes extended 4,301 miles (Dec. 31, 1939) 1.83 per cent of the total mileage in the United States. Class I steam railways (3,470 miles) reported 23,041,567 tons of revenue freight originating in Virginia in 1940 and 33,368,503 tons terminating in Virginia. There are 52 airports and landing fields in the State (16 lighted fields) and five seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 374 civil aircraft in the State and 1,222 airline transport, commercial, and private pilots (977 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 3,779,600, as compared with 3,946,500 acres in 1940. According to the latest census, there are 174,885 farms, valued at \$674,975,424, averaging 94.0 acres each. Farm population numbered 926,280 or 34.6 per cent of the total. Leading crops with production in 1941 were: Corn, \$28,001,000, 32,942,000 bu.; tobacco, \$26,117,000, 91,122,000 lb.; hay, \$18,144,000, 1,264,000 tons; peanuts, \$8,968,000, 169,200,000 lb.; apples, \$8,629,000, 11,505,000 bu.; wheat, \$8,585,000, 7,665,000 bu.; potatoes, \$5,187,000, 6,916,000 bu.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$988,813,246; 2,579 establishments employed 133,896 wage earners who received \$115,538,622 in wages for the year.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$43,582,537 or 1.03 per cent of the total for the United States. The chief item was coal of which 13,230,000 short tons were produced, valued at \$24,608,000 (14,950,000 short tons in 1940)

Trade. According to the 1940 census there were 2,432 wholesale establishments in Virginia, employing 28,236 persons, reporting net sales for 1939 of \$627,632,000 and annual pay roll of \$33,971,000. There were 29,610 retail stores with 74,864 employees, reporting sales of \$628,172,000 and pay roll of \$63,867,000. Service establishments numbered 9,183, employing 20,822 persons for \$15,189,000 per year, and reporting a business volume amounting to \$44,230,000. The leading business center of the State is Richmond which reported wholesale sales of \$208,066,000, retail sales of \$108,306,000, and \$9,742,000 receipts for its service establishments. Norfolk reported sales of \$106,889,000 wholesale and \$63,632,000 retail; Roanoke, \$37,524,000 and \$36,151,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Virginia was \$26,828,000. Under the Social Security program, financed by Federal funds matching State grants, 20,080 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$10.02 (U.S. average pension, \$21.08); 12,813 dependent children in 4,342 families received average monthly payments of \$20.01 per family (U.S. average, \$32.73); and 1,025 blind persons received \$12.61 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 5,352 and received \$9.96 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 5,377 (\$356,000); NYA student work program, 8,399 (\$54,000); NYA out-of-school work program, 8,607 (\$190,000); WPA, 17,378 (\$789,000); other Federal emergency projects, 6 (\$1,000); regular Federal construction projects, 49,822 (\$7,302,000). The Farm Security Administration certified subsistence payments totaling \$8,000 for the month to 135 cases.

Legislature. The General Assembly convenes in regular session on the second Wednesday of January in even years. (There was no session in 1941.) It is composed of 40 Senators (37 Democrats, 1 Republican, 2 vacancies in 1941) and 100 Representatives (93 Democrats and 7 Republicans).

Finances. Total tax collections in Virginia for the fiscal year ending in June, 1941, were \$66,911,000 (1940: \$58,808,000). Total sales taxes amounted to \$26,312,000, including motor fuel, \$21,352,000, alcoholic beverage, \$4,933,000. Taxes on specific businesses ran to \$11,063,000, general and selective property, \$2,818,000, unemployment compensation, \$10,160,000. The net income taxes were \$6,260,000. Cost payments for the operation of general government totaled \$43,699,000 in 1939, the latest year available. (Revenues for the general government for that year were \$76,641,000.) Cost of operation per capita was \$16.53. Total gross debt outstanding in 1941 was \$26,379,000, as compared with \$28,302,000 in 1932.

Officers and Judiciary. The Governor is James H. Price (Dem.), inaugurated in January, 1938, for a four-year term; Secretary of the Commonwealth, Raymond L. Jackson; Attorney General, Abram P. Staples; State Treasurer, Edwin B. Jones; Auditor of Public Accounts, L. McCarthy Downs; Comptroller, Le Roy Hodges. President of the Virginia Supreme Court of Appeals is Preston W. Campbell; there are six associate members chosen for 12-year terms See PRISONS.

VIRGIN ISLANDS. An insular possession of the United States, situated about 60 miles to the east of Puerto Rico. This possession forms the southwestern part of a group which, as a whole, also bears the name, Virgin Islands, and of which the rest is a British possession. When needful for distinction, and commonly abroad, the U.S. possession is known as the Virgin Islands of the United States. This possession comprises three inhabited islands—St. Thomas, St. Croix, and St. John—and some 50 uninhabited islets. Total area, 132 square miles; population, 24,889 in 1940; 22,012 in 1930. Areas and populations (1940) of the individual islands: St. Thomas, 22 square miles, 11,265 inhabitants; St. Croix, 84 square miles, 12,902 inhabitants; St. John, 20 square miles, 722 inhabitants. Of the whole population, 69 per cent in 1940 were Negroes, 22 per cent of mixed race, and 8.9 per cent whites; 1939's birth rate 35.8, death rate 20.9, per 1,000. Capital, Charlotte Amalie—pop. in 1940: 9,801—on the island of St. Thomas.

Production and Trade. The business of the islands suffered a long decline toward the end of Danish possession and under American rule as well, until helped by successive Federal grants. Such grants, in divers forms, for the 10 fiscal years 1931-40 approximated \$8,347,000, making about \$35 a year to the inhabitant. Notably the Virgin Islands Company, a corporate Federal instrument, against original outlay, in capital, of \$3,409,404 and five years' gross receipts of \$824,914, had expenses of \$873,321, leaving a deficit of \$48,407 before taxes and one of \$139,926 after taxes. At this cost the company created more or less employment for much of the population. Chiefly the Corporation kept alive the islands' old industry of making rum out of their sugar cane. The production of sugar cane found its main outlet in exports of sugar to the United States, but the islands' least-favored position as to taxes and agricultural subventions on sugar kept this export low. Cattle-raising, according to Governor Harwood, occupied two-thirds of the area of St. Croix Island in 1941 but only one-twentieth of the island's labor, and fewer cattle were being raised.

The islands continued fairly well served by shipping. In the fiscal year 1941, 979 merchant vessels entered the harbor of St. Thomas. Their gross tonnage totaled 3,303,135, of which U.S. registry sup-

plied about one-half. Vessels of other types being added, all ships entering St. Thomas in that year numbered 1,220 and totaled 3,943,124 gross tons. They ran higher than the year before, though shipping activity in general declined in most ports elsewhere.

The production of sugar in the Virgin Islands was estimated at 7,500 short tons for the crop of 1940-41, as against 9,141 tons, the year's quota allowed to enter the United States. In the calendar year 1940 the imports of merchandise from the United States totaled \$3,023,979; the exports of the islands' native products to the United States, \$1,448,020. Of the latter, rum furnished \$501,924; bitters, \$366,559.

Government. Under previous dispositions and the U.S. Congress, Organic Act of 1936, the Virgin Islands have a Governor, holding office by appointment of the President and, since 1939, acting under the supervision of the U.S. Department of the Interior. Justice is dealt by the U.S. District Court of the Virgin Islands and such subordinate courts as hold power under the Islands' local laws. A Legislative Assembly may enact, subject to Federal approval, measures relating to the Islands as a whole. This Assembly consists of the combined membership of two Municipal Councils. The councils have considerable authority to make local laws for their respective municipalities, that of St. Croix and that of St. Thomas and St. John. These exercise home rule to a degree that limits the Assembly's field. In each municipality the people elect the Council. The natives of the Islands are U.S. citizens, in general, though the phrasing of the grant of citizenship and of its amendment failed to take in some natives no longer in the Islands. Governor in 1941, Charles Harwood.

The chief Insular officers are paid by the United States. All taxes collected from inhabitants of the Islands, whether under Federal laws or under local laws, go into the treasuries of the respective municipalities. The revenue of the two municipalities and their expenditures, for the fiscal year 1941 were: St. Croix, \$139,111 in revenues and \$246,435 in expenditures; St. Thomas and St. John, \$349,260 and \$255,916. The yearly deficit of either municipality recurred without exception throughout the period of U.S. possession until St. Thomas and St. John, largely through a legal opinion granting to it funds held by the Harbor Board, attained a surplus of revenue in fiscal 1941. Yearly Federal appropriations cover each year's approximate deficits, as anticipated.

History. Governor Charles Harwood took office on Feb. 3, 1941. The Army's new air base on St. Croix Island went into use, June 1, being occupied by a force of pursuit airplanes. The Insular Legislature enacted a measure on wages and hours of employment, after the Federal model; it required payment of at least 15 cents an hour for unskilled work of certain kinds; of 20 cents for partly skilled, and of 30 cents for fully skilled. Employers protested that some of them would have to quit business if required to pay these rates. The Governor, however, signed the act, October 18. Measures were taken for the security of territory and people. The Governor proclaimed, May 29, that he had established a council for the defense of the Islands, to work with the Army and Navy and to consider questions of food-supply, civil liberties, recreational facilities, and measures against subversive agents. This body and the military authorities held a joint conference on December 9 to discuss the arming and training of a home guard and various other proposals for strengthening the islands' defenses.

VITAL STATISTICS. According to provisional tabulations published by the Bureau of the Census (Feb. 10, 1941) the birth rate in the United States showed some increase in 1940 over 1939. It rose from 17.3 live births per 1,000 population in 1939 to 18.0 in 1940. There were 2,147,985 births reported in 1940, or 35,722 more than the parallel provisional number reported for 1939. The final figure for 1939 was 2,265,588. The birth rate in the United States went steadily down over a period of 18 years, 1915-33. Since 1933, however, the rate has gradually pulled upward from that year's low of 16.6 to 1940's 18 births per 1,000 population. Provisional figures published Feb. 18, 1942, indicate that the upward trend continued in 1941, bringing the provisional birth rate to 19.0 per 1,000. New Mexico, Utah, Mississippi, Arizona, and South Carolina had the highest birth rate figures for 1940, ranging from New Mexico's 27.7 per 1,000 population to South Carolina's 22.7 per 1,000. The birth rate in the District of Columbia was 23.1. New Jersey had the lowest birth rate for 1940 with 14.1; New York had the next lowest, 14.6.

The number of deaths also increased from 10.6 deaths per 1,000 population in 1939 to 10.8 in 1940. There were 1,417,269 deaths reported in 1940. The final figure for 1939 was 1,387,897 deaths. The United States death rate has steadily declined since 1936, when the death rate was 11.6 per 1,000 population, to the lowest figure ever recorded in 1939. The rise in the 1940 figures checked the decline, but provisional figures indicate another decrease to 10.7 in 1941. Nevada had the largest increase in deaths in 1940, New Mexico the largest decrease.

Infant mortality decreased slightly from 48 per 1,000 population in 1939 to 47.9 in 1940. There were 91,935 infant deaths in 1940; in 1939 there were 91,163. Since 1920 the infant death rate has steadily declined and during the four years, 1936-40, it took an impressive drop from 57.1 to the 47.9 rate of 1940. Provisional 1941 figures show another drop to 46.2. Infant death rates are usually higher in the rural areas and lowest in cities of 100,000 or more population.

Marriages in the year 1940 hit a record-breaking top figure of some 1,565,000. This was even higher than the figure for 1920, when the return of the A.E.F. from France was followed by so great an increase in marriages that the rate rose to 12 marriages per 1,000 population. The Selective Service Act was considered to have had considerable influence on the 1940 marriage rate, which was estimated by the Bureau of the Census to be 11.9 per 1,000 population. The total 1940 figure, however, topped the 1920 total.

The 1940 increase was followed by a rush to the marriage license bureaus in 1941, especially after the entry of the United States into World War II. The few weeks following the attack on Pearl Harbor witnessed a great surge of marriages in the large cities up to 150 per cent over the same period in 1940. Men in uniform expecting to be sent away and soon separated from their girls accounted for the greatest increase. Others were draft evaders seeking dependency deferments through marriage. Still others were defense workers sure of steady jobs that would permit them to marry.

See Table I (p. 720) for deaths from selected causes in the United States in 1940 and 1939. See Table 2 (p. 721) for total figures and rates by States for births, deaths, infant deaths, and deaths from motor vehicle accidents. All rates for 1940

are based on enumerated populations as of April 1, 1940.

For populations and other statistics see articles on each State, Territory, and country. For prison populations, see PRISONS. For comment on infant and maternal deaths, see CHILDREN'S BUREAU.

VITAMINS. See BIOLOGICAL CHEMISTRY, PSYCHIATRY. Compare NUTRITION.

VOCATIONAL TRAINING. See CIVILIAN CONSERVATION CORPS; EDUCATION; NATIONAL YOUTH ADMINISTRATION; PSYCHOLOGY; SCHOOLS; topics listed under DEFENSE TRAINING.

VOLUNTEER AND COMMUNITY PARTICIPATION, Division of. See CIVILIAN DEFENSE, OFFICE OF.

WAGE AND HOUR DIVISION. This Division of the Department of Labor administers the Fair Labor Standards Act of 1938 or Federal Wage and Hour Law. (For details, see YEAR BOOK for 1940.)

Employers have been slow in realizing that the law, under its broad terms, applied to their employees. Other employers did not go along with the Division's position on "hours worked" and "waiting time." Exemptions were misinterpreted by many industries. As a result, the 68,000 inspections made in 1941 by the Division's fourteen regional staffs resulted in more than \$30,000,000 restitution to about 600,000 workers. One minor amendment to the Act was passed in 1941 changing a little-used provision for contracts guaranteeing an annual wage.

Principal change in enforcement policy during

the year was in regard to drawing a line between retail and service establishments, whose employees are exempt, and non-retail merchandise and service establishments whose employees are entitled to a minimum wage and overtime. The change increased the percentage of retail sales and services necessary to qualify the establishment as exempt. Percentage of retail sales or services (as opposed to commercial and wholesale) previously held by the Administrator to be necessary for exemption was 50 per cent. This was increased to 75 per cent, and at the same time, interpretation of "retail sales" or "service" was liberalized to include some sales or service to industrial or commercial purchasers. Such sales must be of articles or services commonly sold both to business and private purchasers and must be in a quantity or at a price similar to sales to private purchasers.

All employers under the Act must keep records of employment prescribed by the Administrator. These Record Keeping Regulations were revised in 1941 and may be obtained at the Division's regional offices.

At the close of the year, three issues regarding the law were before the Supreme Court for decision. The first was a dispute over the Division's interpretation of the provision requiring payment of not less than time and one-half the "regular rate" of pay. The Division has adopted the view that Congress intended each hour worked beyond the statutory maximum should be paid for at one and one-half times the amount paid for each hour below the maximum. Hence, where an employee is not em-

TABLE 1—NUMBER OF DEATHS (EXCLUSIVE OF STILLBIRTHS) FROM EACH CAUSE, AND DEATH RATES (NUMBER PER 100,000 POPULATION) UNITED STATES, 1939 AND 1940

^a Per 1,000 estimated population ^b Under one year of age. ^c Per 1,000 live births. ^d Per 100,000 estimated population. (#) Data not reported * Incompletely reported

played by the hour it is necessary to translate his regular compensation into its equivalent regular hourly rate. In *Fleming v. A. H. Belo Corp.*, concerning salaried employees of a newspaper, the Court is asked to pass on the Division's construction of the Statute in this respect.

Two cases—*Fleming v. Lowell Sun Co.* and *Cudahy Packing Co. of Louisiana v. Fleming*—involve the Administrator's power of subpoena in connection with investigations. Two other cases—*Williams v. Jacksonville Terminal Co.* and *Pickett v. Union Terminal Co.*, both concerning red caps—deal with the question of whether tips are wages.

During 1941, wage orders were issued establishing minimum wages of 40 cents an hour (\$16.00 for the 40-hour week) for employees engaged in manufacturing garments, woolen goods, shoes, furniture, jewelry, rubber, drugs, medicines, cosmetics, enameled utensils, carpets and rugs, portable lamps and shades, and in gray iron foundries. A minimum of 37½ cents an hour was established in textile manufacturing and embroidery work; 36 cents an hour for all trunk-line railroad employees and workers in seamless hosiery mills; 35 cents an hour for lumber and wood workers, luggage and leather goods manufacturing; 34 cents an hour in brick plants; and a range of 36, 38, and 40 cents an hour for workers making paper products. Several of these minima, notably the textile and garment rates, were increases from previous wage order rates. For instance, the first textile wage order prescribed at

least 32½ cents an hour; the 1941 wage order, 37½ cents an hour. It is estimated that these wage orders issued in 1941 increased the hourly wage rate of almost a million workers.

THOMAS W. HOLLAND.

WAGES. See LABOR CONDITIONS; LABOR LEGISLATION; WAGE AND HOUR ADMINISTRATION.

WAKE ISLAND. A possession of the United States in the central Pacific, 2,130 miles west of Hawaii, and consisting of the three small islets of Wake, Peale, and Wilkes enclosing a lagoon. Area, 4 square miles. In 1935 a base was established for the transpacific service of Pan American Airways. During 1939 the U.S. Congress appropriated special funds for the construction of a naval air base and submarine base. Further funds for widening the ship channel into the lagoon to accommodate large seaplane tenders and submarines were voted in March, 1941. Effective May 15, 1941, the islets were designated a "naval defensive sea area" by Presidential proclamation. Unauthorized vessels and aircraft were barred from a three-mile zone around them. Japanese air and naval forces attacked the garrison of less than 400 U.S. Marines beginning Dec. 8, 1941, and overcame their heroic resistance on December 22. See WORLD WAR.

WALES. See GREAT BRITAIN under Area and Population.

WALLIS ARCHIPELAGO. See NEW CALEDONIA.

WAR. See WORLD WAR. For CAUSES OF WAR, WAR PSYCHOSIS, see PSYCHIATRY, PSYCHOLOGY.

WAR DEBTS. No payments were made during 1941 on the indebtedness to the United States of foreign governments under the funding and moratorium agreements concluded after World War I. On May 1, 1941, Finland undertook to pay in 10 annual payments with interest at 3 per cent the sum of \$235,398 on which payment was postponed Dec. 15, 1940. However the U.S. Congress on June 12 gave Finland the option to postpone payment of amounts due the U.S. Treasury during the period Jan. 1, 1941, to Dec. 31, 1942, and this option was accepted. War debt payments in default as of Nov. 15, 1941, are shown in Table I.

I. TOTAL AMOUNTS DUE AND NOT PAID, AS OF NOV. 15, 1941

Country	Funding agreements		Moratorium	Total
	Principal (\$1,000)	Interest (\$1,000)	agreements annuities (\$1,000)

¹ Austrian debt only.

² The Hungarian Government has deposited with the foreign creditors' account at the Hungarian National Bank an amount of Hungarian currency equivalent to the interest payments due from Dec. 15, 1932, to June 15, 1937. The debt funding and moratorium agreements with Hungary provide for payment in dollars in the United States.

³ Excludes the amount of \$100,000 which the Rumanian Government paid to the United States Treasury on June 15, 1940, as "a token of its good faith and of its real desire to reach a new agreement" covering Rumanian indebtedness to the United States.

Germany again defaulted on payments due the United States under the debt agreement of June 23, 1930, covering costs of the American army of occupation, and the mixed claims awards. As of June 30, 1941, the total German

indebtedness under these agreements was 3,160,-221,405 reichsmarks, or \$1,274,517,293, converted at 40.33 cents to the reichsmark. Table II shows the total indebtedness of foreign governments to the United States under the war debt agreements and the total payments received as of Nov. 15, 1941.

WAR PRODUCTION BOARD (WPB). A Federal agency charged with general direction of the U.S. Government's war procurement and production program, established within the Office for Emergency Management by executive orders signed January 16 and January 24, 1942. It absorbed the functions and powers of the Office of Production Management (see PRODUCTION MANAGEMENT, OFFICE OF) and of the Supply Priorities and Allocations Board (q.v.), both of which were abolished.

The Board consists of a chairman appointed by the President, the Secretary of War, the Secretary of the Navy, the Federal Loan Administrator, the Lieutenant General in charge of War Department Production, the director of the Labor Division of the War Production Board, the Administrator of the Office of Price Administration, the chairman of the Board of Economic Warfare, and the Special Assistant to the President supervising the defense aid program.

President Roosevelt appointed Donald Nelson, former director of the Priorities Division of the Office of Production Management, as chairman of the War Production Board. With the advice and assistance of other members of the Board, the chairman was empowered to determine the policies, plans, procedures, and methods of the several Federal departments, establishments, and agencies in respect to war procurement and production. The Army and Navy Munitions Board was required to report to the President through him. The various executive orders establishing and governing other agencies engaged in war production and procurement were amended in accordance with Executive Order 9024 establishing the War Production Board.

Mr. Nelson on January 26 established nine divisions of the War Production Board. The Production Division took over the functions, powers, and personnel of the Division of Production, Division of Contract Distribution, and Tax Amortization Committee of the Office of Production Management. The Division of Industry Operations was subdivided into the Bureau of Priorities, the Bureau of Industry Branches, and the Bureau of Industry Advisory Committees. They assumed, respectively, the functions and powers of the Priorities Division, Industrial Branches, and Bureau of Industry Advisory Committees of the Office of Production Management. To the Labor Division of the WPB were transferred the President's Committee on Fair Employment Practice, the Building Trades Stabilization Board of Review, the func-

tions, powers, and personnel of the Labor Division, and the personnel of the Office of the Associate Director General, of the Office of Production Management. In addition the chairman established a Purchases Division, Materials Division, Civilian Supply Division, Legal Division, Statistics Division, Administrative Division, and Bureau of Industrial Conservation to perform the functions transferred from similar divisions of the Office for Production Management.

According to Executive Order 9024, the chairman of the WPB was authorized to exercise the powers conferred upon him "through such officials or agencies and in such manner as he may determine; and his decisions shall be final." In accordance with this, Mr. Nelson on January 27 delegated to the Office of Price Administration (q.v.) full authority to ration all goods and commodities sold on the retail market and any products sold to ultimate consumers for the satisfaction of personal needs. He also vested in James S. Knowlson, Director of the Division of Industry Operations in the WPB, full authority to operate the priorities system and to administer regulations under requisitioning acts. See NATIONAL DEFENSE MEDIATION BOARD.

WAR RELIEF ACTIVITIES IN THE UNITED STATES. The legion of war relief organizations in the United States put in a busy year throughout 1941. No conceivable method of raising money and supplies for the victims of war was overlooked. There were benefit dances, testimonial dinners, clothing drives, and volunteer sewing for children. College fraternities and sororities presented ambulance and surgical units for shipment to British hospitals. College students raised funds for student refugees. Restaurant employees mobilized plans to help feed civilian war victims. The public was urged to eat economical meals and donate the money thus saved to help Allied war prisoners. Christmas gift shops were opened and the proceeds turned over to the various war relief organizations. There were art exhibits and jewelry auctions. Whole towns raised funds for beleaguered towns in Europe. The Camp Fire Girls aided the canteen services. Merchants and salesmen sent mobile kitchen units. C.I.O. unions gave benefits to aid suffering; various specified unions bought ambulances, drugs, and surgical equipment and one sent a mobile X-ray unit. There was even a drive to enlist old automobile license plates into double duty: to swell the nation's dwindling scrap iron pile, and to aid war relief.

In December, 1941, there were 325 organizations dedicated to the relief of war victims in belligerent countries or to the relief of refugees driven out of those countries, registered with the Department of State. Registration gives them the right to solicit and collect contributions to be used "for medical aid and assistance or for food and clothing to relieve human suffering." The 325 societies listed include groups organized from Sept. 6, 1939, through December, 1941; 97 new organizations came into existence during the year and the registrations of 20 were revoked either at their own request for lack of funds or because their usefulness had come to an end or because they had amalgamated with larger groups, or for unsatisfactory management of funds.

Total funds received by all organizations, exclusive of the Red Cross (q.v.), amounted to \$48,399,563. Funds spent for relief in specific countries totaled \$37,093,682. The estimated value of contributions other than cash was \$14,201,362.31; \$5,761,158 was spent for administration, publicity,

and campaigns. The unexpended balance on December 31, including relief goods bought and still on hand, was \$5,546,498. See ART; PHILANTHROPY; REFUGEES. For the work of specific organizations, see the reports under SOCIETIES.

WASHINGTON. A Pacific State. Area: 68,192 sq. mi., including 1,215 sq. mi. of inland water, but excluding Pacific coastal waters, 226 sq. mi.; Puget Sound, 561 sq. mi.; and parts of the Straits of Juan de Fuca and Georgia, 1,610 sq. mi. Population: (1940 census) 1,736,191. The urban population comprises 53.1 per cent of the total (U.S. average, 56.5 per cent); non-white population, 2.2 per cent (U.S. average, 10.2); elderly (65 years and over), 8.2 per cent. Washington ranks 19th among the States in area, 30th in population, 34th in density, with an average of 25.9 persons per square mile. The capital is Olympia with 13,254 inhabitants; largest city, Seattle, 368,302. There are 39 counties and 14 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to Mrs. Pearl A. Wanamaker, Superintendent of Public Instruction, there were 335,956 pupils enrolled in the public day schools of Washington during the school year 1940-41, 208,852 in elementary schools, 32,419 in junior high schools, and 94,685 in regular and senior high schools. Teachers numbered 11,495 and received an annual average salary of \$1,695. Total expenditures (warrant account) for the year were \$30,514,975. For higher education, see under *Washington* in the table of UNIVERSITIES AND COLLEGES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 6,185, of which 6,020 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 576,248; 473,048 were private and commercial automobiles, 1,213 busses, and 88,234 trucks and tractor trucks. Gross motor-fuel consumption was 366,348,000 gal. Net motor-fuel tax receipts were \$17,185,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$3,728,000.

Railways of all classes extended 5,268 miles (Dec. 31, 1939) 2.24 per cent of the total mileage in the United States. Class I steam railways (4,916 miles) reported 14,121,742 tons of revenue freight originating in Washington in 1940 and 13,095,284 tons terminating in Washington. There are 53 airports and landing fields in the State (18 lighted fields) and 16 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 381 civil aircraft in the State and 2,121 airline transport, commercial, and private pilots (1,757 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 3,549,400, as compared with 3,544,700 acres in 1940. According to the latest census, there are 81,686 farms, valued at \$593,366,445, averaging 185.9 acres each. Farm population numbered 339,950 or 19.6 per cent of the total. Leading crops with production in 1941 were: Wheat, \$53,805,000, 61,142,000 bu.; apples, \$31,185,000, 28,350,000 bu.; hay, \$18,202,000, 1,969,000 tons; commercial truck crops, \$7,303,000; pears, \$7,272,000, 6,099,000 bu.; peas, \$6,825,000, 3,250,000 bu.; potatoes, \$5,124,000, 8,400,000 bu.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$636,649,809; 8,240 establishments

employed 90,324 wage earners who received \$118,326,333 in wages for the year.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$31,590,023 or .75 per cent of the total for the United States. Leading items in 1939 were: sand and gravel, 11,918,217 short tons valued at \$6,048,619 (8,987,761 short tons, \$4,278,251, for 1940); coal, 1,690,000 short tons, \$5,256,000 (1,688,000 short tons for 1940).

Trade. According to the 1940 census there were 3,584 wholesale establishments in Washington, employing 27,425 persons, reporting net sales for 1939 of \$767,731,000 and annual pay roll of \$44,619,000. There were 26,682 retail stores with 66,852 employees, reporting sales of \$668,790,000 and pay roll of \$75,405,000. Service establishments numbered 10,256, employing 19,351 persons for \$17,175,000 per year, and reporting a business volume amounting to \$53,510,000. The leading business center of the State is Seattle which reported wholesale sales of \$451,292,000, retail sales of \$208,537,000, and \$24,675,000 receipts for its service establishments. Spokane reported sales of \$76,081,000 wholesale and \$65,583,000 retail; Tacoma, \$60,111,000 and \$55,065,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Washington was \$42,935,000. Under the Social Security program, financed by Federal funds matching State grants, 57,072 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$32.45 (U.S. average pension, \$21.08); 12,653 dependent children in 5,309 families received average monthly payments of \$36.23 per family (U.S. average, \$32.73); and 1,041 blind persons received \$34.33 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 9,605 and received \$15.77 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 1,684 (\$112,000); NYA student work program, 6,029 (\$49,000); NYA out-of-school work program, 5,476 (\$120,000); WPA, 16,366 (\$1,290,000); other Federal construction projects, 38 (\$3,000); regular Federal construction projects, 25,121 (\$4,268,000). The Farm Security Administration certified subsistence payments totaling \$10,000 for the month to 402 cases.

Legislation. The Legislature convenes in regular session on the second Monday of January in odd years. It is composed of 46 Senators (37 Democrats and 9 Republicans in 1941) and 99 Representatives (68 Democrats and 31 Republicans).

The 27th Legislature adjourned after a day and a half of overtime session, having made record appropriations of \$259,074,652 and enacted a record number of bills—236. Principal reason for the all-time high appropriations was approval of the social security law. The extension of the session beyond the sixty-day limit, with the clocks stopped in the Capitol to avoid the deadline, was a deadlock over the highway bill. The proposed bill, which would have constituted a return to the "pork barrel" system, was finally defeated, largely because members could not agree on details. The accomplishments of the session were summarized as follows in the *Seattle Times*, Mar. 23, 1941:

Education. Appropriated \$39,000,000 for common schools, a new high mark; gave them \$3,700,000 additional to erect buildings and pay teachers, principally in

national defense areas; appropriated \$200,000 more for State aid to junior colleges, appropriated \$5,000,000 for vocational training in schools.

Highways. Appropriated an all-time high of \$75,000,000; increased counties' share of the gas tax \$460,000 at the State's expense; created a State Advisory Highway Commission; directed the State to rebuild the Narrows Bridge [vetoed]; lowered license fees on farmers' trucks.

Agriculture. Appropriated \$297,500 to continue fight against Bang's Disease and tuberculosis in dairy herds; provided \$200,000 to fight pear psylla disease; passed Pure Seed Act; exempted agricultural workers from coming under Unemployment Compensation Law.

Taxation. Raised the sales tax from 2 to 3 per cent, at a cost of \$18,000,000 to the taxpayers in the coming biennium; boosted the tax on pinball and slot-machines; enacted gift tax, passed referendum on graduated net income-tax amendment to Constitution; submitted the 40-mill tax limit to the people again as a referendum.

Social Security. Appropriated \$71,000,000 for public welfare, including some \$54,400,000 for old-age pensions, both record amounts; transferred care of crippled children from Social Security Department to Health Department; passed a bill requiring old-age pension unions to file lists of contributors and expenditures; boosted dependent children's allowances; liberalized housing law to permit rural housing projects.

National Defense. Passed bill stiffening law against criminal anarchy, passed bill authorizing counties or State to lease land to government for defense purposes; approved large highway program, including money to improve roads in Tacoma area, passed law requiring employers to hold jobs for draftees; authorized housing authorities to build homes for defense workers; created staff defense council.

Labor. Increased payments to injured laborers under Workmen's Compensation Law by \$2,000,000 for coming biennium; exempted agricultural labor from coming under unemployment compensation protection, extended unemployment compensation to employers of one or more persons instead of eight or more, as at present; set up apprentices council, barred wage "kick-backs" by workers, required slaughterhouse and restaurant inspection, placed State and municipal employees under federal old-age programs if and when Congress enacts similar law; required sheds be built over railroad repair yards.

State Government Reorganization. Transferred all attorneys in state departments to control of attorney general; transferred all post auditing to State auditor, consolidated Labor and Industries and Tax Commission field auditors' staffs.

Finances. Total tax collections in Washington for the fiscal year ending in March, 1941, were \$76,112,000 (1940: \$69,359,000). Total sales taxes amounted to \$47,327,000, including general sales, \$24,364,000, motor fuel, \$17,563,000. Taxes on specific businesses ran to \$6,278,000, general and selective property, \$3,182,000, unemployment compensation, \$11,524,000. Cost payments for the operation of general government totaled \$67,230,000 in 1939, the latest year available. (Revenues for the general government for that year were \$88,413,000.) Cost of operation per capita was \$39.36. Total gross debt outstanding in 1941 was \$20,611,000, as compared with \$8,257,000 in 1932.

Officers and Judiciary. The Governor is Arthur B. Langlie (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Victor A. Meyers; Secretary of State, Mrs. Belle Reeves; Attorney General, Smith Troy; State Treasurer, Otto A. Case; State Auditor, Cliff Yelle. Chief Justice of the Washington Supreme Court is John S. Robinson; there are eight associate members elected by popular vote for six-year terms.

WATERWAYS, Inland. A decision of the U.S. Supreme Court, in March, holds that structures within the ordinary high-water limits of navigable streams are at the risk of their owners (all land between these limits being Federal property). Hence, such structures may be destroyed by the Federal government without compensation in improving the streams for navigation. This applies even if the structures do not actually interfere with navigation. Except for the long established ship navigation on the Great Lakes, and the highly controversial projects (still on paper) for the St. Lawrence ship navigation and the Florida ship canal, inland navigation in the United States is for barges and river craft. Both of the above projects were classed as items for the postwar construction program, but later were included for immediate attention as national defense works.

Progress on the St. Lawrence international project for power development and a waterway for ocean shipping between the Atlantic Ocean and the Great Lakes included an agreement between the United States and Canada, signed at Ottawa in March, but subject to approval by Congress. This covered the canal, lock, dam, and power plant at the International Falls (between Lake Ontario and Montreal), new locks at Sault Ste. Marie, and works to equalize the flow over Niagara Falls. The estimated cost (in 1941) is \$266,170,000 for the work at the International Falls, with a grand total of \$409,000,000 (U.S. share \$277,000,000), including enlargement of the Canadian canals to provide a waterway adequate for ocean ships. In June, the International Falls work was classed by the U.S. Office of Production Management as a national defense project. In June, also, the U.S. Senate approved a treaty with Canada permitting both countries to divert more water for power purposes at Niagara Falls until October, 1942. Controversy as to this project bases on the fundamental question whether its enormous cost is justified by its prospective traffic and the prospective demand for power, as to which there is little definite or reliable information. There is doubt also, of its value in the national defense program, since its construction will take at least four years (estimates vary from four to eight years) after it is actually started. In fact, the early agreement gave Canada until 1948 to finish its work on the waterway.

An unusual type of waterway, practically paralleling the coast line by linking up lagoons, streams, and canals, is represented in the New Jersey State Inland Waterway and the Intracoastal Canal. The former extends from Manasquan Inlet south to Cold Spring Harbor, 125 miles, and has a 100-ft. channel with 6 ft. of water. It is planned that the Federal Government may take it over and enlarge it to 300 ft. in width and 12 ft. in depth. An auxiliary project is an extension of three or four miles from Cold Spring Harbor to Delaware Bay, thus enabling light craft to avoid the outside passage around Cape May. The Intracoastal Canal is a Federal project intended to parallel the Gulf coast from Florida to the Rio Grande River. Its section from the Mississippi River at New Orleans, to Corpus Christi, Texas, was completed in December, 1941.

The Illinois Waterway, connecting Lake Michigan at Chicago with the Mississippi River at Grafton, Ill., is being widened from Lockport to Grafton to give a 300-ft. channel with 9 ft. of water. The U.S. Supreme Court denied the request of the State of Illinois to increase the present flow from Lake Michigan during the summers of 1941 and 1942, on account of excessive pollution by sewage. The Court held that the conditions complained of

were offensive but not a menace to public health.

On the Pacific slope, extensive improvements made the Columbia River navigable for craft of 8-ft. draft to Pasco, Wash., 332 miles from the mouth of the river and 242 miles from Portland, Ore. Much work is in progress on channel improvements, and Pasco has been established as the port at head of navigation (see PORTS AND HARBORS). Navigation on the Willamette River is hampered by the 50-ft. falls at Oregon City, 13 miles south of Portland, where a canal with four locks 210 x 40 ft. was built by private interests in 1873 for craft of 8 ft. draft and for the great log rafts floated down the river. These works were acquired by the Federal Government in 1913 and a single lock 400 x 60 ft. is being built to replace the four old locks. On account of the high lift and the shallow water, special means are required to prevent objectionable turbulence when the lock is being filled.

The locks at Sault Sainte Marie, Mich., were blocked for three days in October by the fall of a railroad bridge crossing the canal leading from Lake Superior to the locks (see BRIDGES). The iron-ore traffic through this waterway in 1941 broke all records, with more than 80,000,000 tons, as against the previous record of some 65,000,000 tons in 1929. On the Tennessee River development, the Watts Bar lock was completed in March and the dam in December. The lock is 60 x 360 ft., with a lift of 57 ft. normal and 70 ft. maximum. The dam is 97 ft. high. In September, 1941, there was a channel, at least 6 ft. deep, as far as Chattanooga. This channel was to be extended to Knoxville by 1943, and, by June of 1944, was to be completed to a full depth of 11 ft., to allow vessels of 9 ft. draft to pass from the Ohio River at Paducah, Ky., to Knoxville.

In England, there was a marked revival in canal traffic, owing to the heavy traffic on the railways due to war conditions. A government commission has worked to coordinate canal facilities. Many of the canals are old and neglected, and many are owned by the railroads; these latter it has been proposed to transfer to canal companies. Certain systems have been enlarged and modernized, including cargo-handling equipment at the ports. Steel and concrete barges are being built, and also tug-boats of 90 tons cargo capacity, fitted with oil engines. Canalization of the Thames River by a lock and dam near the mouth has been opposed vigorously by the Port of London Authority, on the ground of interfering seriously with the movement of the immense shipping traffic, interfering with the regimen of the river, and causing serious sewage pollution of the "pool" above the dam, while bombing attacks might block the river traffic entirely.

Germany has greatly increased the use of its canals and rivers, and the government transport authorities have coordinated rail and canal traffic to a considerable extent. The Germans also plan to use the Danube extensively, as vessels of 1,500 tons can operate from the Black Sea to Vienna, and 1,000-ton craft for a long distance above. The Danube-Main-Rhine canal and the Danube-Oder canal will connect with the large rivers of central Europe, and a canal from the Oder to the Adriatic Sea is contemplated. Regulating works are to be built at the "Iron Gates" of the Danube.

While Russia has some 250,000 miles of inland waterways, many of the canal links are small and obsolete. Much improvement work has been done for military and commercial purposes, especially to permit the movement of light naval vessels. The old canal between Leningrad and the Volga is said

to have 43 locks, while its modernization would reduce the number to six. War conditions prevent obtaining reliable information and have undoubtedly upset any plans for waterway development.

See AQUEDUCTS; BRIDGES; COAST GUARD, U.S.; DEFENSE TRANSPORTATION, OFFICE OF; FLOOD CONTROL; FLOODS; PANAMA CANAL; SHIPBUILDING; SHIPPING; SUEZ CANAL; TRANSPORTATION DIVISION.

E. E. RUSSELL TRATMAN.

WATER WORKS AND WATER PURIFICATION. Protection of water supply dams, aqueducts, pumping stations, filtration plants, and reservoirs from sabotage was given the utmost attention. (Jordan, Secretary American Water Works Association, "Public Water Supply in the Civil Defense Program," *Jour. Am. Water Works Assn.*, Jan., 1941; New York. Also "Waterworks Preparedness," a symposium, *Engng. News-Record*, June, 1941; New York.) At numerous army camps and cantonments, air bases, munition and other defense plants, there was great activity in providing ample water supplies. Municipal water works were under pressure to meet increasing water consumption and fire protection needs due to defense industries.

Drought in the Eastern United States depleted water in storage for public water supply and for hydro-electric power. In the 18 States from Maine to Georgia, west to Indiana and Tennessee, comprising an area of 450,000 square miles, stream flow in November averaged about half of the normal. (Records kept by Water Resources Board, U.S. Geological Survey.) Rainfall in the Southwest and Southern California was far above normal.

Drinking water standards for interstate passenger carriers on wheels or afloat are being revised by the U.S. Public Health Service with the aid of a large committee of engineers, chemists, and bacteriologists in other branches of the Federal government and in State health departments and private practice.

Works for supplementing the water supply of the Boston Metropolitan District from tributaries of the Connecticut River are nearly completed. In spite of the drought, storage in the Quabbin Reservoir, begun in 1939, had reached 80 billion gallons in December, 1941. The Quabbin Aqueduct Tunnel, extending 24.6 miles from the Quabbin to the Wachusett Reservoir, was practically completed. The long pressure aqueduct from the Wachusett Reservoir to the Chestnut Hill Reservoir, near Boston, lacked 5½ miles of completion. See AQUEDUCTS.

On the Delaware River project, New York City, 84½ miles of the 85-mile aqueduct, 13½ to 19½ ft. in diameter, had been completed on December 31 and about 64 miles lined with concrete. It had been expected that the 16-mile section from the Kensico Reservoir to the city would be ready for test in the spring of 1942 but work has been delayed for lack of operating equipment due to the national defense and priorities situation. Impounding reservoirs on tributaries of the Delaware River are under construction. On the entire project work to the value of \$140,000,000 has been completed.

Owing to the rapid increase in population of the District of Columbia, due to defense activities, an increase in the water supply is imperative. Requirements for aqueducts, pumping stations, filtration works, distributing reservoirs were studied. At

THE COURSE OF THE COLORADO RIVER AQUEDUCT

Courtesy of The New York Times

Tampa, Fla., over 100 miles of 30- to 14-in. cast-iron water mains are being laid to reinforce the distribution system. Intrusion of salt water into the water supply of New Orleans due to changes in the regimen of the Mississippi River has led to preliminary studies for a supply from Lake Pontchartrain through a 50-mile aqueduct. The city of Chicago has completed two 18-ft. tunnels aggregating 10,000 ft. in length to serve the South District water filtration plant, now under construction. This plant will have a capacity of 320-million gallons a day; two others will bring the filter capacity of the city to a billion gallons daily.

After 18 years of planning and building, the Colorado River Aqueduct of the Metropolitan Water District of Southern California began delivering water on June 18. Its completion is opportune in view of the national defense activities in the Los Angeles district. The aqueduct is 394 miles long and ultimately will deliver a billion gallons a day to Los Angeles and the 12 other cities forming the district. To finance it the 13 cities voted, 5 to 1, in 1931, to issue \$220,000,000 of bonds. Water is pumped from the Colorado River and at relay stations to a total height of 1,600 ft. At La Verne, 30 miles east of Los Angeles, the water is softened and filtered in the first installment of the largest plant of the kind yet projected. In length and capacity the Colorado River Aqueduct surpasses any other in existence. The city of Toronto put into use on November 1 a filtration plant with a daily capacity of 100 million imperial gallons (120 U.S.). The filters and long supply tunnel had been completed earlier but owing to financial conditions, and the fact that the city already had two large filtration plants in use, it was not put into operation earlier.

Water-softening plants for city supplies increased from one in 1905 to 576 on July 1, 1941. These plants served 800 communities with a combined population of nearly ten millions. Nearly half of the plants were located in the Central States. The only softening plant in the East was one at Winchester, Mass. Of the 572 plants for which the source of supply was reported, 381 treat underground and 191 surface water. Chemical precipitation was used to throw down the salts causing hardness in 377 plants while in 199 the salts were absorbed by zeolite. (Olsen, "Census of U.S. Municipal Water Softening Plants," *Jour. Am. Water Works Assn.*, Dec., 1941; New York.) See AQUE-DUCTS; DENTISTRY; TUNNELS.

WEST VIRGINIA. A south Atlantic State. Area: 24,181 sq. mi., including 91 sq. mi. of inland water. Popu-

lation: (1940 census) 1,901,974. The urban population comprises 28.1 per cent of the total (U.S. average, 56.5 per cent); non-white population, 6.2 per cent (U.S. average, 10.2); elderly (65 years and over), 5.4 per cent. West Virginia ranks 40th among the States in area, 25th in population, and 13th in density, with an average of 79.0 persons per square mile. The capital is Charleston with 87,914 inhabitants; largest city, Huntington, 78,836. There are 55 counties and 12 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to W. W. Trent, Superintendent of Free Schools, there were 451,053 pupils enrolled in the public schools of West Virginia during the school year 1940-41, 306,942 in elementary schools and 144,111 in secondary schools. Teachers numbered 16,201 and received an annual average salary of \$1,185. Total expenditures for the year were \$27,465,783.

Transportation. State highway mileage in 1939, including streets under State control, totaled 32,872, of which 13,266 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 309,361; 250,294 were private and commercial automobiles, 744 busses, and 51,520 trucks and tractor trucks. Gross motor-fuel consumption was 221,005,000 gal. Net motor-fuel tax receipts were \$10,691,000, the rate being five cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$6,529,000.

Railways of all classes extended 3,847 miles (Dec. 31, 1939) 1.64 per cent of the total mileage in the United States. Class I steam railways (3,128 miles) reported 117,600,111 tons of revenue freight originating in West Virginia in 1940 and 15,037,815 tons terminating in West Virginia. There are 23 airports and landing fields in the State (four lighted fields) and three seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 197 civil aircraft in the State and 946 airline transport, commercial, and private (833 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,376,000, as compared with 1,417,400 acres in 1940. According to the latest census, there are 99,282 farms, valued at \$269,827,285, averaging 89.7 acres each. Farm population numbered 532,512 or 28.0 per cent of the total. The leading crops were corn, worth \$11,076,000 and producing 12,307,000 bu., and hay, \$9,645,000, 818,000 tons.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$441,840,388; 1,130 establishments employed 74,989 wage earners who received \$88,487,433 in wages for the year.

Mineral Production. The chief minerals produced in 1939, in order of value, were: Coal, 107,938,000 short tons valued at \$189,971,000 (126,302,000 short tons in 1940); natural gas, 159,226,000 M cubic feet, \$63,194,000; petroleum, 3,580,000 bbl., \$6,000,000 (3,444,000 bbl. in 1940). The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$275,562,954 or 6.51 per cent of the total for the United States. West Virginia ranks fourth among the States in value of mineral production.

Trade. According to the 1940 census there were 1,424 wholesale establishments in West Virginia, employing 11,525 persons, reporting net sales for 1939 of \$284,196,000 and annual pay roll of \$17,153,000. There were 18,928 retail stores with 42,-

318 employees, reporting sales of \$404,889,000 and pay roll of \$38,263,000. Service establishments numbered 5,192, employing 6,798 persons for \$5,713,000 per year, and reporting a business volume amounting to \$19,662,000. The leading business center of the State is Charleston which reported wholesale sales of \$67,762,000 and retail sales of \$43,839,000. Wheeling reported \$42,088,000 wholesale and \$31,885,000 retail; Huntington, \$39,907,000 and \$31,217,000 respectively.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in West Virginia was \$32,589,000. Under the Social Security program, financed by Federal funds matching State grants, 19,278 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$14.89 (U.S. average pension, \$21.08); 24,992 dependent children in 9,360 families received average monthly payments of \$24.72 per family (U.S. average, \$32.73); and 862 blind persons received \$18.54 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 12,572 and received \$9.43 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 5,165 (\$342,000); NYA student work program, 6,047 (\$41,000); NYA out-of-school work program, 5,870 (\$127,000); WPA, 26,850 (\$1,389,000); other Federal emergency projects, 31 (\$2,000); regular Federal construction projects, 5,995 (\$969,000). The Farm Security Administration certified subsistence payments totaling \$5,000 for the month to 89 cases.

Legislation. The Legislature convenes in regular session on the second Wednesday of January in odd years. It is composed of 32 Senators (26 Democrats and 6 Republicans in 1941) and 94 Representatives (74 Democrats and 20 Republicans).

The 45th session of the Legislature convened on January 8 and adjourned Mar. 8, 1941. According to the summary of A. Hale Watkins, editor of the *West Virginia Blue Book*, 623 bills were introduced during the session, of which 157 became law. Appropriations voted totaled \$39,664,786 for 1941-42 and \$37,378,016 for 1942-43. Most of the general bills enacted amended existing statutes. Following is a brief summary of bills of more general interest.

Chap. 5 provided for a monument to Booker T. Washington at Malden, at a cost of \$5,000. *Chap. 11* submitted to the voters the "Good Roads Amendment" to the Constitution, limiting use of all revenue derived from motor vehicles and motor fuels to road purposes. *Chap. 20* established a State Court of Claims. *Chap. 26* enacted a Uniform Declaratory Judgments Law. *Chap. 27* amended the law on adoption, establishing greater safeguards for both parents and children.

In the field of education, *Chap. 31* revised bases of teacher certification, abolishing old uniform examination. *Chap. 34* gave more leeway to boards of education in providing free textbooks. *Chap. 36* amended the teachers' retirement law and *Chap. 37* raised basic salaries. *Chap. 38* provided for the teaching of scientific temperance in the schools.

A series of election laws were passed, including *Chap. 41*, providing severe penalties for corrupt and pernicious practices, and *Chap. 43*, establishing a uniform system of permanent registration of voters and creating a State Election Commission as an advisory body to the Secretary of State. *Chap. 45* authorized localities and public bodies to aid projects of local housing authorities of the U.S. government. *Chaps. 49* and *50* respectively authorized housing projects for persons of low income including farmers and for national defense workers.

Chap. 52 provided for the creation of the West Virginia State Guard whenever the National Guard of the State is in active Federal service. *Chap. 61* created a State Council of Defense. *Chaps. 62* and *63* altered the law with regard to mining, the former prohibiting employment of miners in bituminous coal mines unless certified by a "miners' examining board," five such boards being authorized.

Chap. 71 provided \$50,000 per month from liquor profits for State aid to municipalities, to reimburse them for enforcing State laws.

The Child Welfare Law and the Public Assistance Law were amended in *Chaps. 73* and *74* respectively. The latter removed the age requirement for the blind, raised the maximum age grant for both the blind and aged from \$30 to \$40, and made the case records confidential. *Chap. 79* created a State Planning Board, and *Chap. 81* a three-man commission to act jointly with Pennsylvania, Virginia, Maryland, and the District of Columbia with regard to pollution and drainage in the Potomac River Basin. *Chap. 87* made basic changes in the Unemployment Compensation Law, increasing minimum benefits from \$3 to \$6, extending period of benefits from 14 to 16 weeks, and reducing the waiting period from three weeks to one. Employers were exempted from contributing to the Fund on any part of an employee's salary above \$3,000 a year in *Chap. 99*.

Personal income taxes were affected by *Chap. 121*, which permitted payment in three equal installments of taxes over \$10, and *Chap. 122*, which fixed the tax on net incomes at 1 per cent on the first thousand dollars, 2 per cent on the second, 3 per cent on the third, 4 per cent on the fourth, 5 per cent on the fifth, 5½ per cent on the sixth, 6 per cent on the seventh thousand dollars and all income above *Chap. 124* extended for another two years the extra one-cent tax on gasoline, making the tax five cents per gallon.

Under a House Concurrent Legislation there was created an Interim Legislative Committee for the purpose of studying, among other things, mining, conservation, and juvenile court laws, institutional care, Public Lands Corporation, civil service for State employees, and compulsory liability insurance for automobile owners.

Finances. Total tax collections in West Virginia for the fiscal year ending in June, 1940, were \$56,236,000. Total sales taxes amounted to \$30,438,000, including general sales \$18,608,000 (inclusive of collections of gross income and gross receipts taxes on public utilities and other businesses), motor fuel, \$10,690,000. Taxes on specific businesses ran to \$2,018,000, general and selective property, \$783,000, unemployment compensation (1941), \$11,524,000. The net income taxes were \$1,598,000.

Total gross debt outstanding in 1941 was \$78,260,000, as compared with \$89,620,000 in 1932.

Officers and Judiciary. The Governor is Matthew M. Neely (Dem.), inaugurated in January, 1941, for a four-year term; Secretary of State, William S. O'Brien; Attorney General, Clarence W. Meadows; State Treasurer, Richard E. Talbot; State Auditor, Edgar B. Sims. President of the West Virginia Supreme Court of Appeals is James B. Riley; there are four associate members elected by popular vote for 12-year terms.

See FLOODS; PRISONS PAROLE, AND CRIME CONTROL.

WHEAT. The wheat crop in the United States in 1941 was estimated by the U.S. Department of Agriculture at 945,937,000 bu., the largest crop since 1919, more than 16 per cent larger than the 1940 crop of 812,374,000 bu. and substantially above the 1930-39 average of 747,507,000 bu. The total area harvested in 1941, 55,831,000 acres compared with 52,980,000 acres in 1940 and the 10-year average of 55,884,000 acres. The crop was favored by ample moisture for seeding the full intended acreage in the main winter wheat States, small winter loss in most important wheat areas, and the rare occurrence in the same year of nearly optimum weather everywhere for growing and maturing of both winter and spring wheat. The higher than average yields, 16.9 bu. per acre versus 15.3 in 1940, contributed more to the heavy crop than did the moderate increase in harvested acreage. Acreages harvested, average acre yields, and total production, respectively, were for winter wheat 39,547,000 acres, 17 bu., 671,293,000 bu.; durum 2,546,000 acres, 16.4 bu., 41,800,000 bu.; and other spring wheat 13,738,000 acres, 16.9 bu., 232,841,000 bu. States leading in winter wheat production

included Kansas 173,092,000 bu., Washington 49,941,000, Ohio 48,950,000, Oklahoma 48,010,000, Illinois 35,300,000, Indiana 34,545,000, Nebraska 34,428,000, Montana 27,762,000, and Texas 27,186,000 bu. Spring wheat production in leading States was in North Dakota 146,198,000 bu., Montana 40,477,000, South Dakota 33,480,000, Minnesota 17,958,000, and Washington 11,201,000 bu. The durum crop included 34,238,000 bu. harvested in North Dakota, 6,384,000 in South Dakota, and 1,178,000 bu. in Minnesota. The season average price per bu. (preliminary) received by farmers was 95.6¢ and the value of production was estimated at \$904,008,000 in 1941 compared to 68.2¢ and \$554,168,000 in 1940.

World wheat production in 1941, excluding U.S.S.R. and China, was estimated at 3,960,000,000 bu., measurably below the 4,003,000,000 bu. grown in 1940.

WINDWARD ISLANDS. An insular group in the British West Indies comprising the colonies shown in the accompanying table.

Colony (Capital)	Sq. mi.	Pop (1939)
Dominica* (Roseau)	304	51,959
Grenada (St. George's)	133 ^b	90,085
St. Lucia (Castries)	233	69,727
St. Vincent (Kingstown)	150 ^c	60,000
Windward Islands (St. George's)	820	271,771

* Dominica was transferred from the Leeward Islands to the Windward Islands on Jan. 1, 1940. ^b Includes the islands—Carrisou, etc.—of the southern Grenadines (13 sq. mi.). ^c Includes the islands—Bequia, Canouan, Mayreau Mustique, and Union—of the northern Grenadines (17 sq. mi.).

Chief towns: St. George's (capital), 4,629 inhabitants (1921 census); Roseau, 9,000; Castries, 21,124; Kingstown, 4,269.

Production and Trade. Arrowroot, cotton, sugar, molasses, rum, copra, cacao, peanuts, cassava, spices, limes, citrus fruits, and vegetables are the main products. Trade of the four colonies (1939): £831,413 for imports and £773,267 for exports. Roads (1939): 1,216 miles.

Government. Finance (1939): £469,265 for revenue and £486,067 for expenditure. Public debt (1939): £577,438. There is one governor for all the four colonies but there is no common legislature and each colony has its own executive and legislative councils. Governor and Commander-in-Chief, Sir Henry Popham (appointed Jan. 19, 1937). See ST. LUCIA; BRITISH WEST INDIES under *History*.

WINE. See LIQUOR PRODUCTION.

WISCONSIN. An east north central State. Area: 56,154 sq. mi., including 1,439 sq. mi. of inland water, but excluding parts of Lake Michigan, 7,387 sq. mi.; and Lake Superior, 2,675 sq. mi. Population: (1940 census) 3,137,587. The urban population comprises 53.5 per cent of the total (U.S. average, 56.5 per cent); non-white population,

0.8 per cent (U.S. average, 10.2); elderly (65 years and over), 7.7 per cent. Wisconsin ranks 25th among the States in area, 13th in population, and 19th in density, with an average of 57.3 persons per square mile. The capital is Madison with 67,447 inhabitants; largest city, Milwaukee, 587,472. There are 71 counties and 33 cities of more than 10,000 inhabitants (see article on POPULATION in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see VITAL STATISTICS.

Education. According to John Callahan, Superintendent of Public Instruction, there were 535,165 pupils enrolled in the public schools of Wisconsin during the school year 1939-40, 374,854 in elementary schools and 160,311 in secondary schools. Teachers numbered 21,577 and received an annual average salary of \$1,400. Total expenditures for the year were \$51,791,020. For higher education, see *Wisconsin* under UNIVERSITIES.

Transportation. State highway mileage in 1939, including streets under State control, totaled 9,934, of which 9,930 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 913,055; 750,953 were private and commercial automobiles, 711 busses, and 149,251 trucks and tractor trucks. Gross motor-fuel consumption was 589,789,000 gallons. Net motor-fuel tax receipts were \$21,311,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$13,075,000.

Railways of all classes extended 6,667 miles (Dec. 31, 1939) 2.84 per cent of the total mileage in the United States. Class I steam railways (5,651 miles) reported 15,104,973 tons of revenue freight originating in Wisconsin in 1940 and 23,187,866 tons terminating in Wisconsin. There are 47 airports and landing fields in the State (15 lighted fields) and 19 seaplane bases and anchorages. On July 1, 1941, according to the Civil Aeronautics Authority, there were 454 civil aircraft in the State and 1,322 airline transport, commercial, and private pilots (1,120 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 9,856,000, as compared with 9,882,400 acres in 1940. According to the latest census, there are 186,735 farms, valued at \$1,188,559,407, averaging 122.5 acres each. Farm population numbered 883,882 or 28.2 per cent of the total. Leading crops with production in 1941 were: Corn, \$68,344,000, 91,125,000 bu.; hay, \$55,255,000, 6,907,000 tons; oats, \$31,781,000, 75,669,000 bu.; barley, \$11,299,000, 16,864,000 bu.; commercial truck crops, \$10,995,000; potatoes, \$8,052,000, 14,378,000 bu.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$1,604,507,356. For details, see 1940 YEAR BOOK.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$12,704,942 or only three-tenths per cent of the total for the United States. Chief items were stone, iron ore, sand, and gravel.

Trade. According to the 1940 census there were 4,798 wholesale establishments in Wisconsin, employing 26,728 persons, reporting net sales for 1939 of \$824,956,000 and annual pay roll of \$42,663,000. There were 47,604 retail stores with 107,409 employees, reporting sales of \$1,064,092,000 and pay roll of \$105,249,000. Service establishments numbered 13,458, employing 18,018 persons for \$16,801,000 per year, and reporting a business volume amounting to \$62,421,000. The leading business center of the State is Milwaukee which re-

ported wholesale sales of \$412,366,000, retail sales of \$288,244,000, and \$24,297,000 receipts for its service establishments. Madison reported sales of \$33,580,000 wholesale and \$44,329,000 retail.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Wisconsin was \$71,563,000. Under the Social Security program, financed by Federal funds matching State grants, 54,018 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$22.73 (U.S. average pension, \$21.08); 28,383 dependent children in 12,484 families received average monthly payments of \$36.64 per family (U.S. average, \$32.73); and 1,983 blind persons received \$23.63 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 24,106 and received \$19.60 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 3,987 (\$264,000); NYA student work program, 10,847 (\$76,000); NYA out-of-school work program, 5,694 (\$138,000); WPA, 30,297 (\$1,929,000); other Federal emergency projects, 21 (\$1,000); regular Federal construction projects, 3,744 (\$369,000). The Farm Security Administration certified subsistence payments totaling \$32,000 for the month to 769 cases.

Legislation. The Legislature convenes in regular session on the second Wednesday of January in odd years. It is composed of 33 Senators (3 Democrats, 24 Republicans, and 6 Progressives in 1941) and 100 Representatives (15 Democrats, 60 Republicans, and 25 Progressives).

According to comment by J. C. Ralston in *The Milwaukee Journal*, June 8, 1941, the ghost of war "had other lobbyists backed off the board" in the 65th Legislature. Excerpts from his summary of 1941 enactments, leading off with defense, follow:

A "Wisconsin state guard" replaces the national guard, now in arms in federal camps. The governor may increase its personnel to whatever point he thinks necessary. It is a volunteer organization, enlisted for one year. Its duties are confined to the state except that the governor, on request, may order it to the defense of another state, and it may pursue enemies and saboteurs across the border. Each state guard battalion is to have an aviation squadron. "The sabotage prevention act" penalizes plots and conspiracies. To convict under this act the state must prove intent. The maximum penalty for purposely damaging property used in war preparation is a \$10,000 fine, 10 years' imprisonment or both; the minimum is one year. The same penalties go for those in shops who intentionally turn out faulty defense jobs. Unsuccessful attempts to sabotage draw half the penalty. Conspirators get a like punishment. War industries may post "keep out" signs at the factory. To ignore the signs draws a \$50 fine or 80 days or both (A number of other measures protected the rights of men in the armed services.)

For the 1941-43 budget, the legislature voted \$78,868,278, compared to \$71,211,976 for the biennium which closes June 30. The biggest boost is in old age pension aid—\$2,041,055 greater in the next two years. The budget total is bigger but income tax revenues are, too. Taking both into account, the deficit for next biennium is not expected to exceed \$2,000,000. In the two years now ending it was \$4,000,000. These deficits represent the sums met from highway funds. Current revenues, plus \$20,500,000 from reenacted privilege dividend, cigaret, gift, transfer taxes, and the 60 per cent income surtax will fill the state's till. The legislature hedged against the chance that Uncle Sam might boost federal income taxes and tap the state's source of revenue. It enacted a clause to maintain state income tax revenues at present levels, no matter what comes.

State government got a gentle shake-up. Repeal of the painters' license law wiped out a bureau. The land economic surveys was transferred from the state planning board to the department of agriculture.

Dairy farmers who sell in the fluid milk market will face new conditions next year—outcome of the failure to reenact the milk control law. The present statute, first

enacted to meet the farm crisis of 1933 and renewed by each succeeding legislature, expires December 31. No one knows just what will happen. Some dealers think milk stands and other unregulated vendors will flourish and that this will result in price wars.

Repeal of teachers' tenure deprived 7,000 teachers, outside of the city of Milwaukee, of the permanency it was intended they should get when the law was passed four years ago. Counties have conducted a modest raid on school cash. Formerly they got 10 per cent of state fines and penalties, while the school fund got 90 per cent. Under a new law, counties will get 25 per cent. The state superintendent is empowered to appoint a supervisor of musical education to head a music study program in rural schools. The history and meaning of the American flag, the Declaration of Independence and the Constitution of the United States will be taught.

Business gets new laws. Bigger building and loan associations will be the rule. Capital stock, formerly restricted to \$5,000,000, is now unlimited. With banking commission approval, one association may purchase the assets of any other association. The purchasing association may pay for assets of the organization it buys in stock. Without banking commission approval, associations may borrow on assets not to exceed 20 per cent of share liability; with approval they may borrow on 50 per cent. The new securities act permits the sale of "seasoned securities" on notice. Public utilities may merge under a written plan approved by a two-thirds vote of each class of stock.

Cities and villages have a new planning and zoning law. Under its provisions the planning commission is required to adopt a master plan to include related areas outside the municipality.

Drivers who now hold licenses must renew them between Sept. 1 and Nov. 1, 1941. No examination is required—the fee is 25¢. New drivers must prove good eyesight, ability to understand traffic signals and knowledge of traffic laws. They must demonstrate ability to operate the vehicle. The fee is \$1. The department may require any operator to undergo a special physical examination—physician's fee, \$2. All licenses must be renewed every four years. Special licenses may be issued to farm boys 14 to 16 years old, but not in Milwaukee county. Young persons from 16 to 18 may also have licenses. Parents or guardians are responsible for drivers in these junior groups. "Negligent homicide" is a new crime created by statutes to cope with drunken and reckless drivers. (The laws pertaining to revocation of licenses and other penalties were also broadened.)

Bosses and employes are happy about the revised unemployment compensation act. Its new standards are designed to preserve the "additional credit" the federal government allows Wisconsin employes under the experience rating system. This system grants lower rates to bosses who keep their men on the job. A new schedule of benefits will take effect in 1942. The rates range from \$2 for a weekly wage of \$3 to \$17 for a weekly wage of \$33 or more. The existing rate is one-half the weekly wage, with a \$15 a week maximum. The number of weeks the employe may draw benefits, based on credit weeks, is increased from one-third to one-half.

Besides their diplomas, physicians and surgeons must have had the equivalent of the premedical course in the University of Wisconsin. After June, 1948, osteopaths licensed in Wisconsin must have completed two years' college work in subjects akin to medicine. Registered nurses must be citizens or have declared their intention, and they must be 21 years old—the age was 20 in the old law. They must be high school graduates—formerly one high school year sufficed. And they must have a diploma from a school of nursing with a three year course instead of two. Dental hygienists must complete high school and have two years in college.

The Thomson act directs the board to hold an examination for director of personnel and certify the three top names to the governor. It also empowers the governor to remove the director "for just cause with approval of the board." The personnel board must not be tainted. Its members must not have run for office or served on political committees for three years prior to appointment. Job hunters who flunk the written civil service test cannot take the oral examination.

By diligence, Brown county's assemblymen pushed through a bill to reapportion their districts. These districts comply with a constitutional mandate to reapportion after each census. A new law bars from the ballot groups linked to alien governments, sabotage, lawlessness and force.

One constitutional amendment was submitted to the vote of the people in 1941 and was passed; it paved the way for installment paying of real estate taxes, thus spreading the property taxpayer's burden.

Finances. Total tax collections in Wisconsin for the fiscal year ending in June, 1941, were \$108,831,000 (1940: \$97,266,000). Total sales taxes

amounted to \$31,584,000, including motor fuel, \$21,849,000. Taxes on specific businesses ran to \$4,044,000, general and selective property, \$14,600,000, unemployment compensation, \$10,647,000. The net income taxes were \$22,814,000. Cost payments for the operation of general government totaled \$74,856,000 in 1939, the latest year available. (Revenues for the general government for that year were \$103,137,000.) Cost of operation per capita was \$24.07. Total gross debt outstanding for 1940 was \$4,104,000, as compared with \$1,184,000 in 1932.

Officers and Judiciary. The Governor is Julius P. Heil (Rep.), inaugurated in January, 1941, for his second two-year term; Lieutenant Governor, Walter S. Goodland; Secretary of State, Fred R. Zimmerman; Attorney General, John E. Martin; State Treasurer, John M. Smith; State Auditor, Fred R. Zimmerman. Chief Justice of the Wisconsin Supreme Court is Marvin B. Rosenberry; there are six associate members elected by popular vote for 10-year terms.

See CONSUMERS' COOPERATIVES; DAMS.

WOMEN IN INDUSTRY. See LABOR CONDITIONS; WOMEN'S BUREAU.

WOMEN'S BUREAU, The. A bureau in the U.S. Department of Labor authorized by law to "formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment."

The defense program was the primary concern of the Bureau during 1941. Investigations of aircraft plants, arsenals making small arms ammunition and artillery ammunition, and instrument-making plants were made by Bureau representatives and on the basis of their findings reports were issued as to the various processes suitable for the employment of women and the training that would be required. Housing and recreational needs of women in defense industries in certain areas where industrial activity is most heavily concentrated or newly developed were studied, and a handbook on standards and policies in relation to such needs is to be published. Two Special Defense Bulletins, *Lifting Heavy Weights in Defense Industries*, and *Safety Clothing for Women in Industry*, were added to the Bureau's series of publications on the intelligent use of women workers in the defense program. Analyses of recent British experience regarding use of women in war industries and significant developments from World War I also were made public. The outbreak of hostilities in the last month of 1941 brought additional responsibilities to the Bureau, which pledged all its resources and its first-hand knowledge of World War I (the Bureau was set up during the first World War to promote the most effective use of women in war industries, and safeguard their interests at the same time), to the task of mobilizing the woman power that will be needed in the present emergency. The Bureau has served as a clearing-house on all questions pertaining to women workers and defense.

Closely tied in with defense activities is the Bureau's Pan-American program. For six months a staff member of the Bureau studied social and economic conditions in Uruguay, Chile, and Argentina. Through this and other efforts the Bureau has initiated a regular exchange of technical information, experience, and ideas regarding the problems of women workers between the two continents.

While the defense program has been of para-

mount importance it has not obscured the significance of other activities of the Bureau; 1941 has seen the Bureau, through its investigations, make available additional data on the health and welfare, the wages, hours, and working conditions, the economic status and responsibilities of wage-earning women. Throughout the year assistance has been given to State and Federal authorities, trade unions, and various organizations and groups interested in raising the status of working women. In answer to thousands of requests, written materials of all sorts, and various exhibits such as charts, maps, films, etc., illustrating and explaining the problems of women in industry, have been sent to schools, trade unions and other organizations, and to inquiring individuals in the United States and abroad.

Of particular interest are the following bulletins published or prepared during 1941:

No. 156-I—State Labor Laws for Women, December 31, 1940—Summary; No. 157—The Legal Status of Women in the United States of America, January 1, 1938—United States Summary; No. 167—State Minimum Wage Laws and Orders, 1940—Second Supplement; No. 180—Employment in Service and Trade Industries in Maine; No. 181—The Nonworking Time of Industrial Women Workers (study by students of Hudson Shore Labor School, July, 1940); No. 182—Employment of Women in the Federal Government, 1925 to 1939 (in press); No. 183—Women Workers in Their Family Environment; No. 184—The Occurrence and Prevention of Occupational Diseases Among Women, 1935-1938; No. 185—The Migratory Labor Problem in Delaware; No. 186—Earnings and Hours in Pacific Coast Fish Canneries; No. 187—Labor Standards and Competitive Market Conditions in the Canned Goods Industry; No. 188-1—Office Work in Houston, 1940, and No. 188-2—Office Work in Los Angeles, 1940 (in press); Special Bul. No. 2—Lifting Heavy Weights in Defense Industries; Special Bul. No. 3—Safety Clothing for Women in Industry. The bimonthly periodical *The Woman Worker* was issued regularly. It makes available to women workers a variety of information on labor laws, court decisions, trade-union agreements, special studies, and so forth.

WOOL. New highs were registered on all fronts in the domestic wool industry during 1941. With mills operating at near capacity rates throughout the year, consumption of apparel wool continued to mount, reaching the amazing level of nearly 11 million lb. of scoured wool weekly near the close of the year. On October 1, mills held unfilled orders for over 98 million linear yards of woolen cloth which, combined with army contracts for about 44 million yards awarded during the final quarter, insured that the rate of production would be maintained during the first half of 1942 even though new orders for civilian use may be relatively small. Dealers and manufacturers held relatively large stocks of wool at the close of the year. Domestic wool consumption for the year totaled 1,213,900,000 lb., grease basis, including 1,021,500,000 lb. of apparel wool and 192,400,000 of carpet wool. Respective totals for 1940 were 683,300,000 and 137,600,000 lb.

Approximately 48 million sheep were shorn in the United States during 1941, yielding an estimated total of 389,128,000 lb. of wool, 3 per cent larger than the previous high production of 1940 and 9 per cent above the 1930-39 average. Total domestic production was further increased by about 66 million lb. of pulled wool. Farmers received 36.7 cents per lb. for grease wool in mid-December as compared with 31.2 cents a year earlier, and averages of 22.3, 28.4, and 35.5 cents for 1939, 1940, and 1941 respectively. The price on the Boston market for territory fine staple wool, scoured basis, which averaged 96.3 cents for 1940, fluctuated only slightly from \$1.08 per lb. during

the first nine months of the year but steadily increased during the last quarter to \$1.14 in December. Other grades followed similar price trends.

United States imports during the first nine months of 1941 included 491,400,000 lb. of apparel wool (132,900,000 lb. for the first nine months of 1940) and 171,000,000 lb. of carpet wool (101,000,000 lb. for the first nine months of 1940). Before 1940, the major part of these imports of apparel wool came from Australia, New Zealand, and South Africa, but during 1940 and 1941 approximately 60 per cent came from South American countries. This percentage does not include Australian wool imported under supervision of the Defense Supplies Corporation and stored in this country as a strategic reserve, which, under the terms of the 1940 British-United States agreement, is to be gradually increased to 250 million lb.

Argentina has also become the primary source of carpet wool imports into this country, since shipping difficulties and the large military requirements of the United Kingdom have largely eliminated British India and China as sources of this commodity. The Argentina-United States Trade Agreement of 1941 reduced the import duty on coarse wool by 11 cents per lb. which should be a further stimulus to Argentine export to this country.

Reliable data on European and Asiatic wool production for 1941 are not available, but the Southern Hemisphere, including all important wool exporting countries, produced 2,338 million lb. during the 1940-41 season and the 1941-42 production is now estimated at 2,350 million lb., a slight increase, but somewhat below the record production of 1939-40. About 70 per cent of the foreign production, including the entire output of Australia, New Zealand, and South Africa, is under the British Wool Control which resells any exportable surplus to approved buyers at a fixed price. It is expected that large quantities of fine grade apparel wool, now in greatest demand in this country, will be available to United States buyers in Australia and South Africa during the 1941-42 season.

WORKMEN'S COMPENSATION. See LABOR LEGISLATION; INSURANCE.

WORK PROJECTS ADMINISTRATION (WPA). The WPA is that part of the Federal Works Agency which since 1935 has operated a program of useful public projects to provide jobs for needy unemployed workers. The great majority of all WPA projects are proposed and sponsored by State and local agencies that cooperate with the WPA in project supervision and pay a considerable share of the total project cost. Relatively small numbers of WPA projects are sponsored, and a few are operated, by Federal agencies other than the WPA.

WPA activities, like those of many other Federal agencies, have been coordinated with the national defense effort. To a large extent WPA participation in the defense program has been effected by an intensification and broadening of certain types of work that had previously been included among the regular program activities. For example, extensive additions and improvements to the national airport network had been made through WPA projects before 1940. Facilities at military and naval reservations had been improved through projects for the construction of roads, buildings, and sewer and

water systems. These kinds of work and the construction or improvement of access roads to military and naval establishments and to defense industrial centers have made up the greater part of the WPA defense activities.

By special provisions in the acts appropriating funds for the fiscal years 1941 and 1942, projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes may be exempted from the requirement that sponsors must contribute one-fourth of the cost of projects approved in each State; from the limitations on hours of work and earnings of project workers; and from the limitations on the use of Federal funds for non-labor costs and for the construction of large buildings. In addition, Congress specifically authorized the WPA to undertake projects to train workers in manual occupations required by defense industries. Projects that the War and Navy Departments have certified as important for military or naval purposes have been given preference in operation to speed their completion.

The WPA has given employment to more than 8,000,000 different persons at one time or another since its establishment in 1935. The work done by these people has covered a variety of construction and nonconstruction activities that have contributed both to the national defense and to the physical facilities and public services of communities throughout the Nation. More than 600,000 miles of road construction and improvement were completed by WPA workers during the six years ending with June, 1941; about 73,000 new bridges and viaducts were built and some 44,000 others were reconditioned; 220 new airports were constructed and nearly twice that number were enlarged or improved. WPA workers also constructed nearly 500 miles of new airport runways; built large numbers of hangars, maintenance shops, and other airport buildings; and completed many other airport and airway improvements. The 110,000 public buildings constructed or improved during the six-year period include not only school buildings, hospitals, libraries, gymnasiums, and other structures for community use, but also armories, mess halls, storehouses, and other buildings at military and naval establishments. Some of the 14,000 miles of new water lines and 22,000 miles of new storm and sanitary sewers installed by WPA workers also were for military and naval centers. Other WPA accomplishments in the construction field include parks, playgrounds, swimming pools, and other recreational facilities; conservation requirements, such as storage dams and reservoirs; and many other needed public facilities.

WPA activities outside the construction field have provided a wide variety of community services that are important to the public welfare, such as literacy, naturalization, and other adult education classes; nursery schools for preschool children from low-income families; school lunches; the making of garments and other articles in sewing rooms for distribution to needy families and public institutions; direct medical and health services for persons who could not otherwise afford them; and clerical, research, and professional assistance to many local and Federal governmental agencies. Another major activity has been the national defense vocational training project through which substantial numbers of workers have received training in occupations required in defense industries.

During 1941 the WPA program was operated on a smaller scale than ever before. From the winter peak of 1,890,000 workers in January, average

monthly employment dropped steadily to less than 1,411,000 in June, reflecting seasonal decreases in need and the improvement in general business conditions that resulted from the defense program. At the beginning of the 1942 fiscal year the decline was greatly accelerated by the drastic curtailment in the amount of funds appropriated to the WPA, and employment was reduced to barely 1,055,000 in July. During the remaining months of 1941 the number of WPA workers fluctuated between 1,037,000 and 1,057,000 (November, 1941). During November about a third of the WPA workers were employed on defense projects.

A high rate of turnover among the workers employed has always been characteristic of the WPA program. During 1941, the number of separations was unusually large, reaching a peak of nearly 384,000 in June. A large share of the separations represent workers voluntarily leaving WPA jobs to obtain private employment. The rate of all separations varied from 11 to 27 per cent of employment at the beginning of the respective months as compared with accession rates that ranged from 9 to 15 per cent during the same period.

For the operation of the program during the calendar year 1941 a total of \$1,135,217,000 in WPA funds was spent, of which 96.4 per cent was for project costs (including those of a small number of projects operated by other Federal agencies) and 3.6 per cent for administrative and miscellaneous purposes. About 37 per cent of the WPA project expenditures were made for defense work. A large share (87 per cent) of the total project expenditures from WPA funds were paid out in wages to workers. The expenditures of WPA funds for projects operated by the WPA were supplemented by \$476,582,000 in funds provided by project sponsors. These sponsors' funds, most of which were used for materials, equipment, and other non-labor costs of project operations, represented 31 per cent of the total outlay for projects operated by the WPA.

For further details, see the annual *Report on Progress of the WPA Program* (Work Projects Administration, Washington, D.C.)

HOWARD O. HUNTER.

WORLD COURT. The Permanent Court of International Justice, whose seat at The Hague had been occupied and whose judges and officials had been deprived of their diplomatic status by the Nazis held no session during 1941. Its President and Registrar had moved their offices to Switzerland, while the judge of American nationality, Hon. Manley O. Hudson, represented the Court at the meeting of the Supervisory Commission in Montreal. See LEAGUE OF NATIONS.

WORLD SERIES. See BASEBALL.

WORLD WAR. For military campaigns of the first two years of war see YEAR BOOKS for 1939 and 1940 under EUROPEAN WAR. The following chronology, quoted (with bibliographical references omitted) from the *Department of State Bulletin*, Dec. 27, 1941, pp. 590-5, will serve as a résumé of developments in the war up to the beginning of 1941. (For 1941 chronology see under CHRONOLOGY in this volume.)

1938

March 11—German troops crossed Austrian frontier.
March 13—Austro-German Union proclaimed at Vienna: "Austria is a state (land) of the German Reich."

April 16—British-Italian agreement signed, whereby Great Britain recognized the conquest of Ethiopia and Italy promised to withdraw all troops from Spain at the conclusion of the civil war.

April 27-29—Three-day Anglo-French conference at London. Arrangement concluded whereby the British and French general staffs would collaborate more closely henceforth in military and naval defense.

July 21—Chaco Peace Pact signed, ending the long conflict between Bolivia and Paraguay.

September 15—Chamberlain-Hitler talk at Berchtesgaden.

September 22-23—Chamberlain-Hitler talks at Godesberg.

September 26—President Roosevelt appealed for peace directly to Hitler and President Benes.

September 28—Chamberlain, Daladier, Hitler, and Mussolini signed Munich Pact.

September 30—Chamberlain-Hitler peace declaration signed.

October 1-10—Sudeten areas occupied by Germany.

October 1—Czechoslovakia yielded to Poland.

October 2—Polish troops occupied the Teichen area.

December 6—Franco-German peace declaration signed.

1939

March 14—German, Hungarian, and Rumanian troops invaded Czechoslovakia Slovakia proclaimed independence.

March 16—German Government officially proclaimed Bohemia and Moravia protectorates. Decree of March 16 of the Government of the Reich on the Protectorate of Bohemia and Moravia.

Slovakia taken over as a protectorate by Germany.

Hungary announced annexation of Carpatho-Ukraine.

March 22—Memel ceded to Germany by Lithuania: Reunion completed with the signature at Berlin of a five-point nonaggression pact.

March 31—Prime Minister Chamberlain in the House of Commons announced a British and French pledge to come to the assistance of Poland with all the power at their command "in the event of any action which clearly threatened Polish independence and which the Polish Government accordingly considered it vital to resist with their national forces."

April 1—Spanish civil war ended: "After having made prisoner and disarmed the Red Army, the National troops have attained their final military objective in consequence, the civil war is over" (Gen. Francisco Franco).

April 6—Prime Minister Chamberlain announced in the House of Commons a Polish-British agreement, bringing into existence a triple alliance—France, Great Britain, and Poland. The agreement was a provisional mutual-aid pact, pending the elaboration of a formal treaty of alliance.

April 7—Italian troops invaded Albania.

April 13—Prime Minister Chamberlain made statement in House of Commons which guaranteed borders of Rumania and Greece: "... in the event of any action being taken which clearly threatened the independence of Greece or Rumania... His Majesty's Government would feel themselves bound at once to lend... all the support in their power." Similar assurances were given by France.

April 14—Communication of President Roosevelt to Chancellor Hitler and Premier Mussolini: Plea for 10-year guaranty of peace.

April 25—German note notified Great Britain of denunciation of the Naval Agreement of June 18, 1935.

German note to Poland denounced the 10-year nonaggression treaty of January 26, 1934 between the two countries and requested the return of Danzig as well as an extraterritorial railway and highway connection to East Prussia.

July 26—United States gave notice of intention to abrogate its commercial treaty of 1911 with Japan in note from the Secretary of State to the Japanese Ambassador.

August 23—German-U.S.S.R. nonaggression pact signed.

August 24—President Roosevelt sent appeals for peace to Chancellor Hitler, Premier Moscicki, and King Victor Emmanuel.

August 25—Great Britain and Poland signed formal treaty of mutual assistance.

September 1—German troops invaded Poland; Danzig joined Germany.

September 3—Great Britain declared a state of war existed with Germany.

France declared a state of war existed with Germany.

September 16—Soviet troops invaded Poland.

September 28—German-U.S.S.R. border and friendship treaty signed, resulting in partitioning of Poland.

Estonian-U.S.S.R. 10-year mutual-assistance pact signed at Moscow: Gave U.S.S.R. bases for aviation and artillery.

October 3—Declaration of Panamá signed.
October 5—Latvian-U.S.S.R. 10-year mutual-assistance pact signed at Moscow.

October 10—Lithuanian-U.S.S.R. 15-year mutual assistance treaty signed at Moscow.
 October 19—Anglo-French-Turkish 15-year mutual-assistance pact signed at Ankara.
 November 1—Polish Corridor, Posen, and Upper Silesia annexed by Germany.
 November 3—U.S.S.R. incorporated Polish Western Ukraine and Western White Russia.
 November 4—United States Neutrality Act of 1939 approved.
 November 21—German-Slovak treaty signed at Berlin, ceding to Slovakia 225 square miles of territory annexed by Poland in 1920, 1924, and 1938.
 November 30—Soviet troops invaded Finland.

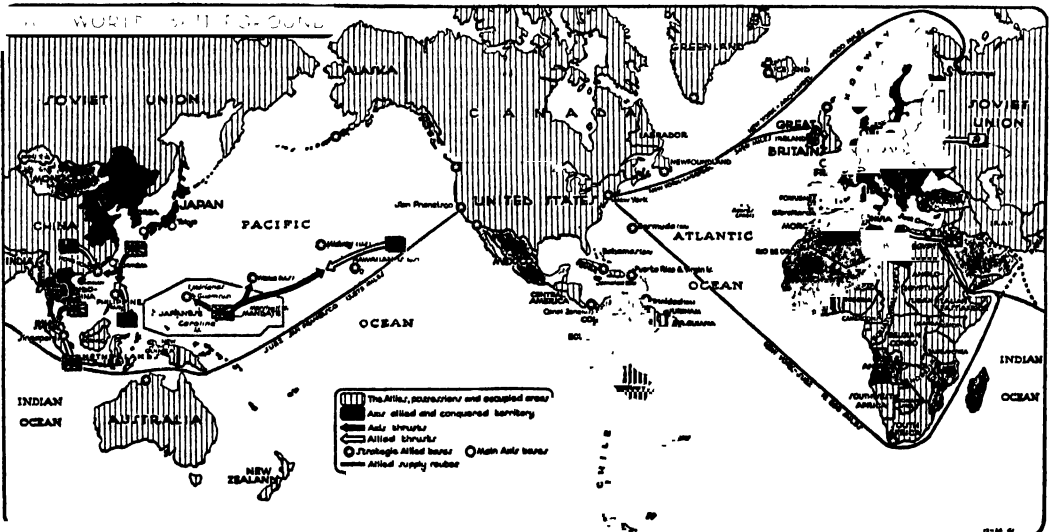

1940

March 12—Soviet-Finnish peace treaty and protocol signed at Moscow.
 April 3—Great Britain and France announced that three areas of Norwegian waters had been mined in the attempt to prevent shipment of Scandinavian ore to Germany.
 April 9—German troops invaded Denmark. Germany attacked Norway.
 April 17—Secretary of State Hull issued a formal statement declaring any change in *status quo* "would be prejudicial to the cause of stability, peace, and security" in the entire Pacific Area.
 May 9-10—Germany invaded Belgium, Luxembourg, and the Netherlands.
 May 10—Winston Churchill became Prime Minister of Great Britain following resignation of Neville Chamberlain.
 British occupation of Iceland announced in London.
 May 15—The Netherlands Army surrendered.
 May 19—Chancellor Hitler issued a proclamation decreeing the reincorporation into the Reich of Eupen, Malmédy, and Moresnet.
 May 28—Belgian Army under King Leopold surrendered.
 June 9—Norwegian high command ordered army to cease hostilities at midnight.
 June 10—Italy declared war on Great Britain and France.
 June 14—German troops entered Paris.
 June 15—Soviet troops marched into Lithuania.
 June 17—U.S.S.R. announced Estonia and Latvia had agreed to free passage of Soviet troops and to formation of new governments.
 June 22—Franco-German armistice signed.
 June 24—Franco-Italian armistice signed.
 June 27—Rumania agreed to cede Bessarabia to U.S.S.R.
 June 28—British Government recognized Gen. Charles de Gaulle as leader of group to maintain French resistance.
 July 3—British sank or seized major part of French fleet.
 July 5—French Government of Marshal Pétain broke off diplomatic relations with Great Britain as result of British attack on French warships at Oran.

July 18—British Prime Minister announced terms of a temporary agreement for stoppage of war supplies to China through Burma and Hong Kong.
 August 26—Estonia, Latvia, and Lithuania ratified U.S.S.R. incorporation.
 September 2—United States-British notes on lease of British bases in return for 50 United States destroyers.
 September 7—Bulgarian-Rumanian agreement ceding the Dobruja to Bulgaria signed at Orlova, Bulgaria.
 September 23—Japanese-French agreement regarding concessions in Indo-China to Japan.
 September 27—German-Italian-Japanese 10-year military-economic alliance pact signed at Berlin.
 October 28—Italy attacked Greece prior to expiration of ultimatum, creating state of war.
 November 4—Spanish incorporation of international zone of Tangier.
 November 20—Hungary signed protocol of adherence to Axis tripartite pact at Vienna.
 November 23—Rumania signed protocol of adherence to Axis tripartite pact at Vienna.
 November 24—Slovakia signed protocol of adherence to Axis tripartite pact at Berlin.
 November 26—Governor-General of Belgian Congo declared state of war with Italy.
 November 30—Japanese peace treaty signed with the Wang Ching-wei regime at Nanking, China.
 December 6—Japanese-Thai pact of amity signed.
 December 12—Hungarian-Yugoslav treaty of friendship signed.

THE WAR IN 1941

At the close of 1940 the war had spread far beyond the confines of Europe and had assumed a revolutionary character both in its military and political aspects. Modern weapons and techniques had accelerated the tempo of military events beyond the imagination of prewar military critics. Poland had been conquered in about three weeks. Denmark was occupied in a single day. Norway succumbed in less than a month. Holland, Belgium, and France were over-run and conquered in a campaign of 40-odd days. A completely revolutionary alteration in fundamental European national-political concepts seemed inescapably connected with these rapid German successes.
 Not only had the pace of military operations increased, but the character of the war underwent fundamental changes with the collapse of France and the entrance of Italy into the war. From the end of June, 1940, Britain faced the overwhelming continental military power of the Axis and enjoyed superiority in only one weapon—sea power. Eco-

Courtesy of The New York Times

THE LINE-UP OF ALLIED AND AXIS POWERS, DEC. 31, 1941

Bolivia, which was reported to have declared war on Japan, actually remained non-belligerent

conomic exploitation of the conquered areas by special German economic troops (Wehrwirtschaftstruppe) added to the effectiveness of German war industry and offset the effects of the British blockade. With the failure of the Luftwaffe to soften the British Isles for an invasion, the war gradually extended to other theaters and took on the essential characteristics of a struggle between land and sea power.

Only in three instances in 1940 did the triumphant Axis meet with reverses. The German Luftwaffe failed in its mass raids on Britain in September and October; the Italian invaders of Greece were thrown back into a humiliating defense of Albania; the British Imperial Army of the Nile assumed the offensive at Sidi Barrani (December 7-10) and captured or destroyed almost the entire Italian garrison. Sweeping past Solum and Fort Capuzzo, the striking force of Gen. Sir Archibald P. Wavell was at the gates of Bardia on Dec. 31, 1940.

British Offensive in Libya. This offensive (Jan. 1-Feb. 9, 1941) was made possible by the courage and vision of Winston Churchill, who sent sufficient first-line fighter planes, bombers, and tanks from Britain to the Middle East (in the face of a threatened German invasion) to give General Wavell superiority over the Italian Libyan army in these weapons. It is probable that Churchill determined soon after the collapse of France to extend the war to distant fronts, on the sound assumption that this was the only kind of war which afforded the British Empire a reasonable chance of ultimate victory.

The British striking force which surprised the Italians at Sidi Barrani and which went on to destroy the greater part of Marshal Graziani's army never exceeded 40,000 men. The campaign which followed illustrated once again the helplessness of mere numbers in the face of superior military equipment and planning. The Italian Libyan army (according to the statement of Mussolini) numbered more than 290,000 men and possessed 1,900 cannons, 770 tanks, 15,000 machine guns, and 10,000 trucks. The British hope for success depended upon the effective command of the air attained by Air Marshal Sir Arthur Longmore's squadrons, on the support of the Royal Navy, on the superior but limited mechanized equipment of Gen. Michael O'Moore Creagh, on the offensive skill of the Australian combat divisions, on the superior morale of the British troops, and on the efficiency of British staff work.

Before the Sidi Barrani battle few military critics believed that surprise was possible in a desert theater of war. The harsh and inhospitable area of operations was regarded by both sides as a hindrance to movement. General Wavell was among the first British officers to see that the desert could be used like the sea to transport men and equipment to the decisive point if mechanical equipment was available and if command of the air was maintained. Marshal Graziani played into the British hands by acting upon the World War concept of "fighting for places." As a result his army was destroyed piecemeal.

The unexpected success of December 7-10 and the relatively low state of Italian morale prompted General Wavell to advance into Libya. His forces encircled Bardia on January 1 and captured it on January 6. Advancing immediately on Tobruk, where heavier resistance was encountered, Australian shock troops broke through the defenses of this important base and captured it on January 22. Large numbers of prisoners, including several field officers, were captured. The ancient cruiser *San*

Georgio (10,000 tons) was destroyed in the harbor. Derna was surrounded on January 24 and fell on January 30. Benghazi was captured on February 7 and the Italian outpost at El Aghaila was occupied on February 9. These victories yielded a total of 150,000 Italian prisoners and an immense bag of military booty. As was true of the losses suffered by the German armies in their victorious campaigns, the British casualties were remarkably low. On March 5 the British War Office announced the total casualties in the Libyan campaign as 1,744 killed and wounded.

General Wavell's victories were the first British successes on land during the war. They cheered and inspired the whole British Empire and the neutral world at a time when British morale needed a lift. Combined with the Greek victories in Albania, they brought Italian military prestige and morale to a new low and made German intervention for her relief imperative.

With the capture of El Aghaila on February 9 the British offensive in Libya slowed down. Despite press clamor for an invasion of Tripoli, General Wavell did not have the forces or equipment necessary. Free French forces captured an Italian oasis post at Kufra (Kupra) on March 3, and the British occupied the oasis of Jarabub on March 25, but the military balance in Libya had already been altered against the British. Marshal Graziani was replaced on March 25 by Gen. Italo Gariboldi, who, in turn, became a virtual subordinate of Gen. Erwin Rommel, commander of the German forces sent to North Africa. The mechanized division of General Creagh needed an overhaul after fighting over 500 miles of rough terrain. Enemy action had already altered the situation of General Wavell's army.

Before the British offensive in Libya had reached its crest, German forces in Italy made their weight felt. Stuka squadrons based on Catania in Sicily made a desperate and sustained attack on a British convoy in the Straits of Pantelleria during the week of January 10. The British convoy destined for the eastern Mediterranean was protected by the aircraft carrier *Illustrious*, by cruisers, and destroyers. Dive bombers and torpedo planes carried out the attack with reckless disregard for losses. Possibly the British were surprised by the determination of the Nazi pilots who closed in on the convoy making direct hits on the carrier and other vessels. Concentrating their attack on the cruiser *Southampton* (9,000 tons) and the destroyer *Gallant* (1,375 tons), they inflicted so much damage that both these vessels were sunk. The main flight deck of the *Illustrious* was severely damaged; her sides and upperworks were riddled with bomb splinters; but her anti-aircraft guns remained in action and she succeeded in making the port of Valletta in Malta. Repeated bombing attacks designed to finish her off in the harbor were ineffective. She proceeded to Alexandria under her own steam and finally arrived in the United States for repairs. Though 12 Stuka planes were shot down in the engagement and others were destroyed over Malta and bombed at their base, the action in the Straits of Pantelleria was highly important. The *Southampton* was the first British cruiser to be sunk outright by bombing. After this experience the British surface forces ceased to operate freely in these waters, and the Axis was able to transport troops and equipment to reinforce the army in Libya.

A German mechanized division (commanded by General Rommel) as well as German fighter planes and bombers appeared on this front. By the middle of February General Rommel possessed superiority in both air power and mechanized equipment on

the front near El Agheila. General Rommel was a tank expert who had served in the Polish, Flanders, and French campaigns. He had the reputation of being a tough and resourceful soldier. The direction of the Axis war in North Africa soon passed into his hands. His forces captured El Agheila on March 25. The British and neutral press treated this step as a minor episode of desert warfare, but when General Rommel's force recaptured Bengazi on April 4, no further illusions were possible.

Events in Greece had also altered the plans of the British Middle East Command. Because of demands for troops in the Balkans, it was necessary to abandon the territorial gains of the Libyan campaign. The decision to retire to the Egyptian bases probably saved General Wavell's advanced forces from capture. General Rommel's bold and well-organized sweeps only succeeded in capturing a small number of troops. On the night of April 8, however, a German motorcycle unit cut off a convoy and captured three senior British generals (Neame, Gambier-Parry, and O'Connor). A strong British garrison was left in Tobruk under Gen. Leslie Morshead, since it could be supplied from the sea. The mass of the army was withdrawn to its old position at Sidi Barrani and Mersa Matruh. After the middle of April the front in this area remained static until the British offensive of November 18.

The Conquest of Italian East Africa, which was being prepared while the Libyan campaign was underway, cannot be considered apart from it and other events in the eastern Mediterranean. Indecisive fighting had broken out on the frontiers of Kenya

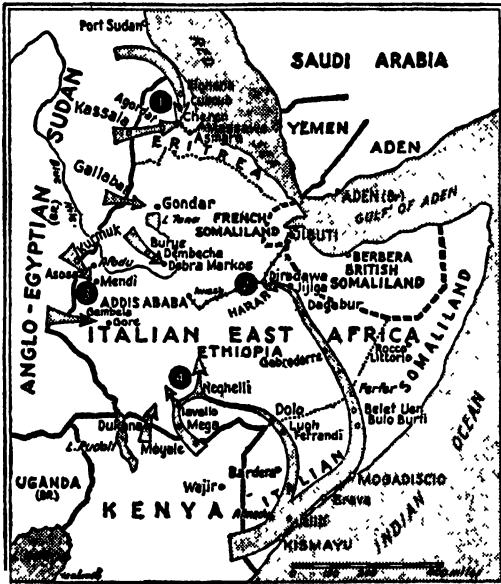

munitions to the Middle East. Though the Duke of Aosta was isolated from Italy and faced certain destruction with the gradual exhaustion of his supplies, his armies constituted a threat to the Sudan as long as they were intact. The British had suffered the loss of British Somaliland in July, 1940. Like other projected Allied operations in the Middle East, British plans for action against the Duke of Aosta were adversely affected by the collapse of France and the uncertainty over the status of French Somaliland and its garrison.

An imperial army of South African, Indian, and British troops numbering about 60,000 men was concentrated for the conquest of Italian East Africa. The attack developed from four main directions in February, 1941. One British column advanced from Moyale in Kenya toward Mega (captured February 20) and Neghelli (captured March 23) in Ethiopia. A second British column from Kenya under the command of Gen. Sir Alan Cunningham crossed into Italian Somaliland, bridged the Juba river, and advanced on Mogadiscio. The main Italian military strength in this colony was broken in operations before Mogadiscio in which over 10,000 prisoners were captured. The capital of Italian Somaliland fell on February 26, and General Cunningham's column was able to advance northward into Ethiopia. Gabredarre was captured on March 9 and Jigjiga on March 19. The Addis Ababa-Djibouti railway was cut on March 30 with the British capture of Direddawa. A third British column advanced from the Sudan in the direction of Burye (captured March 6) and Addis Ababa which was evacuated by the Italian forces on April 6.

A fourth British column operating from Kassala commanded by Lieut. Gen. William Platt invaded Eritrea and captured Agordat on February 2. Advancing northeastward toward the Red Sea this column encountered the main Italian resistance at Cheren on February 12. Well-entrenched in a mountain fastness the Fascist troops put up a stubborn and gallant defense. Demonstrating a morale distinctly superior to that encountered in the army of Marshal Graziani, the Italian forces at Cheren held out until March 28. The fall of Cheren enabled the British column in Eritrea to divide. One part moved northward to occupy Massaua (captured April 8) and Assab (captured June 12). The other half of the British column in Eritrea turned southward to effect a junction with General Cunningham's forces in Ethiopia. The main forces of the Duke of Aosta were driven to cover at Ambi Alagi and forced to surrender on May 19. This capitulation practically completed the military conquest of Italian East Africa.

The exiled Emperor Haile Selassie set up his temporary field headquarters at Burye on March 26 and entered his former capital on May 6. Scattered Italian and native bands continued resistance in the Gondar area until November 29, but these uncoordinated efforts were meaningless. With the virtually complete occupation of Eritrea, Italian Somaliland, and Ethiopia, the Italian East African colonial empire built up through years of work and sacrifice had been conquered in approximately seven months. Combined with the defeats in Libya the loss of her East African Empire revealed the weakness of Italian military strength. She became more and more the virtual prisoner of Nazi Germany.

Background of the Balkan Campaign. Italian defeats in Albania and Africa having made German military assistance necessary, German air squadrons and technical troops moved into Italy during the winter of 1940-41. German dive bomber squadrons

CAMPAIGN IN EAST AFRICA

Multiple Allied drives opened the way for the conquest of Ethiopia by the capture of Cheren (1), Harar (2), Gambela (3), and Neghelli (4) in March, 1941

and Egypt in June, 1940, but the program for destroying the Duke of Aosta's forces (some 250,000 white and native troops) did not materialize until February, 1941. The British occupation of the Red Sea littoral, the Gulf of Aden, and the ports of Italian Somaliland might encourage the United States to remove this area from the combat zone and facilitate the shipment of American arms and

based on Sicily covered the reenforcement of the Axis Libyan army and made their strength apparent in the action in the Straits of Pantelleria in January. In an attempt to undermine Italian home morale, British air raids on Italian cities were conducted throughout the winter and the Gibraltar fleet made a surprise bombardment of Genoa on February 9, killing 72 and wounding 226 Italians. British parachute troops were employed for the first time in the war to destroy Italian communications in the Calabria-Lucania area on February 13-14. Throughout January and February Greek troops in Albania repulsed Italian counter attacks in the Klisura, Tepelini, and Elbasan sectors and retained the initiative which they had gained in the earlier stages of the conflict. Repeated failures and heavy losses on the Albanian front caused the replacement of Gen. Ubaldo Soddu by Gen. Count Ugo Cavallero on January 13. These events foreshadowed early active German military assistance in the Balkans.

Axis diplomatic preparations for a spring campaign in the Balkans were made in the winter of 1940-41. Rumania and Hungary became German vassals through gradual infiltration of Nazi military units. Axis military problems in the Balkans were considerably simplified on February 17 when Turkey and Bulgaria signed a nonaggression pact which protected the Axis flank on the Bulgar-Turkish frontier. Bulgaria joined the Axis on March 1, and subsequent troop movements into that country enabled the Germans to put heavy pressure on Yugoslavia to join the "new European order."

British counter steps were limited to breaking off diplomatic relations with Rumania and threatening to bomb Bulgarian bases. In February and March British Foreign Secretary Anthony Eden and Chief of the Imperial General Staff, Gen. Sir John Dill, visited Cairo, Ankara, and Athens, in an attempt to nullify Axis pressure. They were unable to secure consent of the Yugoslav Government to participate in joint military conversations. The German Government maintained outwardly friendly relations with the Greek Government and was able to check up on reported British troop movements to Greece. Both sides exerted the strongest possible pressure on Yugoslavia to assure her cooperation in event of hostilities. By the end of March, it was apparent that the spread of the war to the Balkans was merely a matter of time.

The Battle of Cape Matapan (March 28). Italian naval sweeps designed to cut off British transports moving to Greek ports led to a naval engagement between British and Italian naval forces off Cape Matapan on March 28. This was the first meeting of any considerable body of Italian and British warships since the destructive raid carried out by Admiral Cunningham's torpedo planes against the Italian naval base at Taranto on Nov. 11, 1940. British reconnaissance planes reported a movement of Italian war vessels southwest of Sicily at noon on March 27. At once British light forces commanded by Vice Adm. H. D. Fridham-Whippel consisting of the cruisers *Orton* (flagship), *Ajax*, *Perth*, and *Gloucester*, and destroyers left Alexandria for a rendezvous south of Crete. They were followed by units of the main fleet under command of Adm. Sir Andrew Cunningham consisting of the battleships *Warspite* (flagship), *Valiant*, and *Barham*, the aircraft carrier *Formidable*, and destroyers.

The Italian fleet consisting of 1 battleship of the *Littorio* class, 6 cruisers, and 7 destroyers was located at 7:49 a.m. on the following day by British scouting planes 35 miles south of Gavdo island steaming in a southeasterly direction. Contact was

established by the British light forces at 8:02 a.m., and an attempt was made to lure the Italian force toward the oncoming British main fleet (55 miles to the southeast). Torpedo planes from the carrier *Formidable* made an attack on the Italian battleship of the *Littorio* class during the morning. This attack caused the whole Italian fleet to turn about and the British light forces lost contact with the enemy. The two halves of the British fleet united during the morning and steamed in pursuit of the enemy. At 11:35 a.m. British naval patrol planes reported a second Italian fleet consisting of 2 battleships of the *Cavour* class, 3 cruisers, and 4 destroyers, 80 miles west of Gavdo island.

In the early afternoon three hits were scored on the Italian battleship of the *Littorio* class by torpedo planes and by 4 p.m. its speed had been reduced. Efforts made to protect the stricken vessel probably reduced the speed of the whole Italian fleet, for British light forces again made contact with the enemy after dusk. At 10:10 p.m. units of the main British fleet overtook what appeared to be a damaged enemy cruiser. Immediately two other enemy cruisers were picked up by the searchlight of the destroyer *Greyhound*. Riddled by the 15-inch guns of the *Barham* and *Valiant*, the enemy cruisers *Pola* (10,000 tons), *Zara*, and *Fiume* (sisterships to the *Pola*) were sunk. In the melee which followed, the large Italian destroyer *Vincenzo Gioberti* (1,729 tons) and the destroyer *Maestrale* (1,449 tons) were also sunk. Bombing attacks by German planes prevented the British from rescuing more than 55 officers and 850 men. One German Ju. 88 bomber was shot down. Total British losses were two naval aircraft. At the close of the action, Admiral Cunningham sent a radio message *en clair* to the Chief of the Italian naval staff giving the location of about 350 Italian survivors on rafts. This courtesy was immediately acknowledged by the Commander-in-chief of the Italian navy who radioed that the hospital ship *Gradisca* had left Taranto to pick them up.

Coming on the heels of preceding Italian naval losses, the battle of Cape Matapan seemed to re-enforce Britain's control of the surface of the eastern Mediterranean. No further efforts were made by enemy surface craft to interfere with British transports moving to Greece.

Outbreak of War in the Balkans (Apr. 6, 1941). German diplomatic pressure finally brought the pro-Axis Premier of Yugoslavia, Dragisa Cvetkovich, and Foreign Minister Aleksander Cincar-Markovich to a council table with Axis officials at Vienna on March 25. They signed an agreement making their nation a part of the "new European order." Though permission to transport troops through Yugoslavian territory was not specifically granted to Germany, it could be assumed that (as in the case with Bulgaria) these demands would soon be made. In order to exert the threat of military pressure on Greece, Germany needed access to the Vardar valley. The Greek-Bulgar frontier was well-defended by the modern Metaxas line constructed in 1934. With large concentrations of German troops in Bulgaria and with the prospect of facing a German attack by way of the Vardar valley, and the possibility of a junction of German and Italian troops in Albania, Greece would have no choice but to make peace on Axis terms. Hitler would then have reaped all the advantages of a military victory without fighting.

The pact with the Axis proved to be unpopular with the Serb population of Yugoslavia. Public demonstrations against the pact were climaxed on March 27 by a coup d'état engineered by Gen.

Dushan Simovich. Prince Paul and his pro-Axis ministers were driven into exile; youthful Prince Peter was proclaimed king. General Simovich headed the new government which, while professing friendly intentions toward the Axis, in effect repudiated the pact of March 25. There was rejoicing in London and Athens and public indignation in Berlin and Rome. If the action of Yugoslavia did not prevent a German military movement for the relief of the Italian army in Albania, it appeared that such a movement would now be rendered difficult and hazardous.

The Yugoslav army consisted of 30 infantry, 3 cavalry divisions, and 10 reenforced infantry brigades. Though the loyalty of Croatian units in the army was doubtful, Serb troops in the First World War had proved themselves to be tough and resourceful soldiers. Theoretically the mountainous terrain in southern Yugoslavia lent itself to defensive fighting. Unfortunately the army was lacking in modern military equipment and training. It was short of tanks, planes, anti-tank and anti-aircraft equipment. In addition the army was spread out over the whole frontier in a strategically hopeless cordon type of defense. Had the Simovich Government been given sufficient time, it might have corrected this elementary error, but Hitler never neglects any advantage in time. He struck on April 6.

There was a Greek force of 5 divisions commanded by General Papagos deployed behind the Metaxas line in Macedonia. The main Greek army (about 18 divisions) was operating against the Italians in Albania. It was commanded by General Tsolakoglu. Greek troops were well enough equipped to deal with the Italians and enjoyed a high morale. They were forced to rely on the British for air support. This disadvantage would be multiplied as soon as the Luftwaffe began to operate in the Balkans.

Sensing the possible development of a new front in the Balkans, the British Government assumed the risks involved by sending a small expeditionary force to Greece commanded by Gen. Sir Henry Maitland Wilson. It consisted of two infantry divisions (Australian and New Zealand) and one armored regiment. Relatively few bombers and about 100 first-line fighter planes were sent to Greece. There were said to be only seven useful military airfields in Greece. The appearance of British troops in Greece inspired the Greeks and Yugoslavs. It became clear that if Hitler wished to put Greece out of the war, he would have to strike through Yugoslavia. In this case he would face a total force of approximately a million Yugoslav, Greek, and British troops. Remembering the military prowess of the Serb troops in 1914-18, considering the rough terrain involved, counting the total potential troops which might be ranged against Hitler, the press and public of Allied and neutral countries anticipated a strong resistance to an attack. Many critics spoke of the Yugoslav decision to repudiate the Axis as the turning point in the war.

These hopes were unfounded. The appearances of Allied strength in the Balkans were deceptive. For fear of offending the Axis, the Yugoslav Government had declined to participate in joint British-Greek staff conversations. As a result there was no effective liaison between the Yugoslav army and the Greek-British force. As usual the Germans enjoyed the advantage of attacking two separate adversaries instead of a single enemy. So well advanced were Nazi military preparations in the Balkans that Hitler was forced to delay the start of the campaign only one week after the rebuff by Yugoslavia. On the morning of April 6 he declared war on Yugoslavia and sent his armies into Greece.

The Balkan Campaign (April 6-28). German troops in the Balkans on April 6 consisted of 32 infantry divisions (of which 4 were motorized) and 6 panzer (armored) divisions. These forces were divided into two armies. The second army (General Weichs) was stationed in Hungary; the twelfth army (Field Marshal List) was stationed in Bulgaria. Generals Löhner and Richthofen commanded two fleets of the Luftwaffe earmarked for the operation. One German army corps was stationed in Rumania south of the Timisul river. In addition the Axis could count on the second Italian army (General Ambrosio) stationed on the Yugoslav frontier in the Julian Alps. The Italian ninth army (General Biroli) and the eleventh army (General Geloso) were tied down in Albania, but could assume the offensive as soon as the Greek army in Albania was menaced. A Hungarian force of at least one army corps was concentrated north of the Banat.

Hitler's speech to the Reichstag on May 4 reveals that he gave orders for the assumption of operations as soon as the news of the Yugoslav coup d'état came. The general plan of operations called for a movement of General Boehme's corps of the twelfth army into Thrace via Rupel Pass and the Vardar valley toward Salonika with the objective of cutting off the Greek army defending the Metaxas line. Other elements of the twelfth army were to break through the Yugoslav border defenses to Skopje and ultimately join with the Italian armies in Albania. These two steps were to begin on April 6. Two days later Kleist's armored corps of the twelfth army was to advance into the Morava river valley and advance northward via Nish to Belgrade. The German corps in Rumania was to attack directly across the frontier toward Semlino and Belgrade. Three days later (April 11) the second army in the north would come into action. It was to drive across the Drave river toward Zagreb, then move along the Save toward Sisac, then southeastward toward Sarajevo. Other elements of the second army were to move along the Save toward Obrenovac and Valjevo. The Italian second army was to move along the coast into Croatia, then, picking up a small garrison at Zara, would attempt to join hands with the Italian troops in Albania.

The German strategy planned for the destruction of the Yugoslav armies before dealing with the Greek and British forces. The timing of the blows was deceptive, since it was natural to suppose that the first German stroke would fall in the north where the terrain was favorable and where the Croatian population was of doubtful loyalty to the Yugoslav Government. Instead, the first advance was to take place through the most difficult terrain in the south. It aimed at the conquest of the strongholds to which the Yugoslav armies were expected to retreat in case of defeat in the north. The second major surprise of the campaign was the speed with which the passes and valleys in the south were seized.

The war in the Balkans was essentially a struggle for roads and passes. Contrary to the common opinion the offensive in mountain warfare often enjoys real advantages over the defense. This has been pointed out by students of mountain warfare from Bourcet to Franchet D'Esperey. Working with the German forces in the Balkans were such experienced leaders in mountain warfare as Generals Falkenhorst and Dietl who had distinguished themselves in the Norwegian campaign. The German technique in mountain warfare was to employ the shock combat team of infantry and engineers to clear the way through the passes for their panzer divisions aided (as in the case of the penetration

GERMAN AND ITALIAN DRIVES IN YUGOSLAVIA

of the Maginot extension) by dive bomber attacks. Once through the passes, armored units aimed at the division or encirclement of enemy units by deep and rapid penetrations followed by motorized infantry or troops on foot.

The operations of Field Marshal List's twelfth army aimed at the separation of the Yugoslav and Greek armies. Surprise was attained at the decisive break-through points in the south by restricting German troop movements to the hours of darkness. At dawn on April 6 General Strumme's corps of the twelfth army moved against Skoplje. The way for his panzer division through Stracin pass was cleared by infantry. Breaking through the pass Strumme's mechanized units rolled forward under Stuka protection and reached Skoplje at 5 p.m. on April 7. It was a staggering development and completely upset the calculations of the Yugoslav high command. Another column of Strumme's corps consisting of motorized and foot infantry advanced on Carevo-Selo and Veles. Joining forces at Veles the two columns of Strumme's corps advanced to Prilep on April 10 and swarmed into the Monastir

gap. In four days the Yugoslav army had been cut off from the Greeks. The German forces were in a position to join hands with the Italians in Albania, and from their position in the Monastir region, threatened to outflank the British-Greek force which held a line from Florina to Katerina.

Simultaneously with these operations General Boehme's corps of the twelfth army moved against the Greek army in Thrace. While German infantry and engineer units fought a bloody engagement with the Greek defenders of Rupel pass, General Boehme's armored division advanced into the Strumitza river valley and occupied Doiran on the outskirts of the Vardar valley on April 8. It found the area virtually unprotected. Once in the broad avenue of the Vardar valley, the armored division rolled into Salonika almost without opposition on April 9. This development cut off the Greek forces defending the Metaxas line in the north and General Papagos surrendered his five divisions on April 10. Such were the developments of four days of war in the south.

Meanwhile farther north General Kleist's corps

of the twelfth army, concentrated astride the Nisava road, fought its way into the Morava river valley and captured Nish on April 9. Instead of moving southward from this point as was commonly expected, Kleist's corps raced northward up the Morava valley and entered Belgrade (which had been savagely bombed) on April 13. Kleist found that units of the German army corps which had advanced from Rumania were already on the outskirts of the capital. Combined with the unexpected outcome of events in the south, these blows broke down all cohesion in the Yugoslav army.

The final collapse was aided by the advance of General Weich's second army from Hungary. It was joined by a Hungarian army corps which advanced into the Banat. The second army captured Zagreb on April 11, Karvolac on April 12, and then raced toward Sarajevo. From the Julian Alps the second Italian army advanced into Slovenia and Croatia. Meeting practically no opposition it reached Ragusa on the Adriatic coast on April 17. Negotiations for the surrender of the Yugoslav army were begun on April 15 and went into effect

on April 17. Though the actual battle casualties of the Yugoslav army were not large, their strategical position on April 17 was absolutely hopeless. Nazi reports list 6,000 officers and 337,000 men as prisoners on April 17; others were rounded up later.

The Greek Campaign (April 10-30). The position of the British-Greek forces on the Florina-Katerina front was rendered hazardous by the appearance of German armored forces (General Strumme's corps) in the Monastir gap on April 10. From this position the Nazi forces threatened the left flank of the Allied line. In view of these developments and the surrender of the northern Greek divisions, General Wilson determined upon a policy of retirement and evacuation. From April 10 on the campaign in Greece hinged upon the efforts of the British and Greek forces in the central sector to defend the roads and passes leading into southern Greece long enough to permit the safe withdrawal of the British Expeditionary Force. It soon became apparent that the Greek forces in Albania could not be withdrawn rapidly enough to escape encirclement by advancing German units.

the Nazi invasion

(I N P.)

From April 11 to 12 the Australian division (General Blamey) fought a defensive action at the Florina-Vevi pass which held up the advance of General Strumme's corps. But this position was taken by the Germans on April 12, and two days later they occupied Kozani. From this point the Germans advanced through difficult terrain to Servia, Grevena and Kalabaka, reaching the latter on April 19. In this region German troops encountered disorganized Greek forces retreating from Albania. Quick to seize upon the disorganization of the enemy, General Strumme sent a motorized S.S. division racing from Kalabaka to Janina which it occupied late on April 19. This was another of those startling and unexpected moves by small and mobile German units which had so completely disrupted Yugoslav plans. The capture of Janina cut off the retreat of the Greek army in Albania and General Tsolakoglu surrendered his forces on April 24.

While these unhappy events were taking place, the major fighting in the West centered around the roads and passes leading to Larissa. Delaying actions were fought at the Servia-Stenaportis pass on the Kozani-Larissa road, and at the Petra and Tembi passes on the Katerini-Elasson and the Katerini-Larissa roads. General Boehme's troops entered Larissa on April 19. A defensive position at Thermopylae pass was held by the Australian forces from April 20-24 which enabled the British to retreat to the Chalcis-Thebes line. Evacuation of British troops from southern Greek ports had been underway for several nights. By use of parachute troops the Germans effected a crossing of the Corinth canal on April 26. Athens capitulated the following day. On April 28 the Germans advanced deep into the Peloponnesus. At the end of the month their occupation of the Greek mainland and adjacent islands was complete.

As early as April 21 the Greek Government admitted that the military situation was hopeless and requested the British Government to withdraw its forces. Operating mostly at night the British navy covered the withdrawal of 45,000 soldiers, losing two destroyers and four transports (500 casualties) in the operation. British casualties were estimated at 5,000 killed, wounded, and missing, and 10,000 prisoners. Overwhelming air superiority, superb coordination of all German forces, bold and imaginative leadership, crushing superiority in mechanized equipment, and relentless energy and individual fighting skill on the part of the troops, all combined to explain the quick and complete German triumph.

In addition to the Yugoslav prisoners (8,000 officers and 337,000 men), the Germans reported capturing 8,000 Greek officers and 210,000 men plus 10,000 British prisoners. Casualties of the German ground troops were placed at 57 officers and 1,042 men killed, 194 officers and 3,943 men wounded and missing. The casualties of the Luftwaffe were reported as 10 officers and 42 men killed, 36 officers and 104 men missing. Twelve of the German divisions in the Balkans were not engaged in the actual fighting.

The quick German conquest of Yugoslavia and Greece extended the Axis domination of Europe to the shores of the Aegean sea. It lowered British military prestige in the Middle East and restored flagging Italian morale. Turkey's western frontier was exposed to Axis military pressure. Active military assistance (though relatively unimportant) rendered by Hungary foreshadowed closer military collaboration between the Axis and its Balkan satellites. Since Australian and New Zealand troops

had suffered the heaviest losses of the Greek campaign, General Blamey was appointed second in command to General Wavell in the Middle East.

British Intervention in Iraq (April 19-June 1). Axis diplomacy had been active in the Middle East during the spring of 1941. By the terms of a treaty dating back to June 30, 1930, Britain enjoyed special privileges in Iraq such as the use of her railways, ports, and rivers. The treaty provided for the long-term lease of two military air ports to Britain and insured the uninterrupted flow of oil through the pipe-lines leading to the Mediterranean. Premier Rashid Ali Beg Gailani acquired power through a coup d'état and joined in the Axis efforts to turn the country against Britain. Sporadic fighting broke out in Iraq on May 1 when troops of Rashid Ali made an attack on the British-controlled airfield at Habbaniya. The "revolt" in Iraq seemed timed to coincide with the Allied defeat in Greece. German planes, which apparently used Syrian airfields for "forced landings," appeared at Mosul, Kirkuk, and Baghdad in support of the anti-British movement.

In anticipation of this development British troops were reported landing in Basra on April 19. A small British motorized force arrived at Habbaniya airfield on May 4, having made the trip from Basra in a single day. A strange battle between the Iraq forces employing artillery and the British forces employing planes and armored cars raged around the airfield for several days. British troops from Trans-Jordan and Basra eventually gained the upper hand; Rashid Ali fled Baghdad on May 30, and an armistice went into effect on June 1. The activity in Iraq coincided with the surprise German assault on Crete. Because of the relative ease with which it was handled by the British, it may be assumed that the "revolt" was prematurely put into effect by Rashid Ali, or was from the first regarded by the Germans as a diversion for the Crete attack.

German Conquest of Crete (May 20-June 1). The attack which fell upon the British and Greek garrison on Crete during the early morning hours of May 20, illustrated once again the unconventional character of Nazi military thinking. In one respect the Crete campaign was unique and portentous. Not that the conquest of the island itself was so important, but that the methods employed were revolutionary and held promise for further developments. Until the German assault on Crete it was regarded as a military axiom that ship-borne infantry were required for the invasion of an island. Nor was it regarded as feasible to undertake an invasion of an island until local command of the sea had been obtained. The British regarded the fleet as their first line of defense. After the Crete attack all doctrines regarding the power of naval forces to protect islands from invasion had to be revised. Air power wrote a new chapter in the history of war in the last weeks of May 1941.

The British (with Greek approval) had occupied Crete shortly after the Italian attack on Greece in the fall of 1940. Its possession afforded the British unique military advantages. From its flying fields British bombers could strike at Axis lines of communication in Libya. Suda Bay provided a useful advance base for British naval units in the eastern Mediterranean. The island was fairly well protected against a traditional landing from the sea. There was a garrison of 42,000 British and Greek troops under the command of Gen. Bernard Freyberg who had won a V.C. for personal bravery in the World War. Beaches were wired and mined. Machine guns in pill-boxes guarded stra-

tegic points. There was insufficient anti-aircraft artillery to protect the three principal landing fields—Rethymnon, Candia, and Maleme—and the garrison contained a number of men who had just been evacuated from Greece where they had felt the full power of the Luftwaffe. Having seen the relative helplessness of an army under the overwhelming air power of an enemy, they were in a sense psychologically conditioned for the German air assault which followed.

On May 20, after a week of heavy bombing, German parachute and glider troops were dropped in three important coastal areas near the British airports. So rapidly were these troops reenforced from the air, and so perfect was their equipment and organization, that they gradually drove the British and Greek forces from their positions around the airfields. The German operations were directed by General Löhner of the 4th air fleet. Many innovations such as the dropping of weapons in variously colored parachutes, the landing of anti-tank guns in parts, the supplying and munitioning of a force by plane were embodied in the German attack. It was the strangest battle of the war. The Germans were without tanks and artillery, but were constantly supported by bombers and ground attack planes. The British possessed tanks and artillery, but because the landing fields could not be defended against bombers, British pursuit aviation was withdrawn from the island at the end of the first day. This left the garrison without defense against German planes.

Disdaining a strategy of economy the Germans deliberately crashed transport planes carrying troops to Crete in order to keep the stream of reinforcements flowing. It was these unconventional forms of attack which upset British plans of defense. There was no chance of reinforcing the garrison from Alexandria in time to be of help. General Wavell made the distasteful decision to cut his losses. The evacuation of Crete was carried out under cover of darkness and protected by the British navy. Planes from the middle East command did their best to protect the convoys from the air. Fifteen thousand men out of a garrison of 42,000 were withdrawn. The rest were casualties and prisoners.

In keeping with its best traditions the British navy gallantly attempted to prevent the passage of sea-borne Axis troops to Crete. They cut up Axis convoys of small craft, sinking several troop-laden vessels. But in the operations around Crete British surface ships had to operate within easy range of German shore-based bombers. They were subjected to unmerciful bombing. Three British cruisers and four destroyers were sunk. Two battleships, an aircraft carrier, a cruiser, and other vessels were damaged. These were the heaviest losses sustained by the British navy in any campaign in the war.

The brilliance and audacity of the German plan of attack, the organization and precision of its development, won praise from even British critics. It reenforced the lessons of Poland, Norway, France, and Libya, that airpower was essential for the conduct of modern warfare. The fall of Crete seemed to indicate that other islands (perhaps England itself) had lost their ancient immunity from attack. Because no immediate German attack in the Middle East followed the Crete victory, many students of war think that it was primarily a vast and costly laboratory experiment which the Germans might conceivably repeat in some other area at a critical stage in the war.

Naval Action in the Strait of Denmark (May 24-26).

The unconventional character of German naval strategy, already revealed in the Norwegian campaign, was again demonstrated in May, 1941. Not possessing naval force great enough to engage in a line-of-battle fight with the British fleet, units of the German navy were used (as in the case of the *Graf Spee* and *Scharnhorst*) to fall upon British convoys and their protecting escort. Capitalizing on the morale-destroying victory then underway in Crete, and following the decisive victory attained by German arms in the Balkan campaign, the new German battleship *Bismarck* (35,000 tons), commanded by Adm. Günther Lütjens, carrying eight 15-inch guns, and the cruiser *Prinz Eugen* (10,000 tons) left Bergen harbor on May 21 to raid British shipping in northern waters. A British patrol plane reported their departure, and they were sighted on the morning of May 24 in Denmark Strait, between Greenland and Iceland, by the British battle cruiser *Hood* (42,000 tons) carrying the flag of V.-Adm. Lancelot Holland and the battleship *Prince of Wales* (35,000 tons). In a short engagement under conditions of poor visibility the *Hood* (eight 15-inch guns) suffered a direct hit in her forward magazine by an incredibly lucky shot from the *Bismarck* and sank with a heavy loss of life. The *Prince of Wales* was also hit but suffered minor damage. The *Hood* was the largest vessel in the British navy and her destruction in a fair fight (aided by the ten 14-inch guns of the *Prince of Wales*) with the new but smaller *Bismarck* had a profound if temporary effect on British spirit.

The engagement with the *Hood* fixed the location of the *Bismarck* but she was lost by pursuing vessels. Soon the full weight of the British navy was thrown across the supposed route of the *Bismarck*. Units from home bases including the *Prince of Wales*, the *King George V*, the *Rodney*, the *Ramillies*, and the aircraft carrier *Victoria*, concentrated in the zone of anticipated action. The battleship *Renown* and the aircraft carrier *Ark Royal* joined the chase from their Gibraltar base. After an apparently fruitless search, the *Bismarck* was located some 400 miles from Brest by a long-range American-built Catalina (Consolidated PBV) patrol plane. She was attacked at once by torpedo planes from the carrier *Victoria*. She was attacked again at 9:30 p.m. on May 25 by torpedo planes from the carrier *Ark Royal*. At least three torpedo hits were claimed on the *Bismarck* which reduced her speed. Surface vessels made contact with the *Bismarck* at 2 a.m. on May 26 when she was sighted by the cruiser *Norfolk*. Throughout the morning she engaged in a long range gunnery duel with the British battleships *Rodney* and *King George V*. Repeated hits by 15- and 14-inch salvos were scored on the hull and upperworks of the *Bismarck*. The range finally closed to a point where secondary batteries of the battleships and the guns of British cruisers joined in the attack. The *Bismarck* withstood 20 minutes of concentrated shelling at relatively close range. Observers in the British ships could see shell after shell rip through her frame. Finally her two main turrets and secondary guns ceased firing. The ship took a sharp list to port and lay helpless on the water. Two torpedoes fired at 11:01 a.m. by the cruiser *Dorsetshire* caused her to turn over and sink. Approximately 100 seamen were rescued. Since the *Bismarck* was said to have had 400 naval cadets aboard as part of their training schedule in addition to her regular crew, the German loss of life was very heavy.

The naval action at Cape Matapan and that beginning in the Strait of Denmark emphasized the

importance of aircraft carriers as a fleet auxiliary. In both cases planes from carriers made torpedo attacks on fleeing enemy ships which reduced their speed. In both engagements naval aviation proved to be the most important form of reconnaissance. The ability of the *Bismarck* to absorb punishment spoke well for German naval engineering and construction. Her loss left the German navy with but a single ship of her class (the *Tirpitz*). The loss of the *Hood*, though a serious blow to the British, did not alter her preponderance in surface strength over the Axis navies. The willingness of the German high command to risk a new ship such as the *Bismarck* on a raid in northern waters, which in itself could not affect the course of the war, showed clearly that Hitler was not fighting a traditional sea war, but regarded this merely as a diverting episode in his scheme (then already maturing) for a move against the bases of British sea power to be conducted on land. It may also have been carried out with the intention of influencing American action.

After the sinking of the *Bismarck*, the *Prinz Eugen* escaped to the security of Brest. There it joined the battleships *Scharnhorst* and *Gneisenau*. Repeated British bombing attacks were made against these vessels in June and July. Hits were claimed on two of the vessels though the extent of damage could not be estimated. The attacks were sufficiently annoying, however, that the Germans moved the *Scharnhorst* to La Pallice 240 miles south of Brest on July 22. A camouflaged tanker was placed in her berth but did not deceive the British observation planes. The *Scharnhorst* was located on July 23 at La Pallice by planes of the Coastal Command.

R.A.F. Raid of July 24. The largest daylight raid of the war by the R.A.F. was carried out on July 24 in an attempt to damage and immobilize these vessels. A great fleet of 4-motor Flying Fortresses (Boeing B-17), Sterling, and Halifax bombers, protected by fleets of fighter planes raided the ports of Brest and La Pallice. Equipped with turbo-superchargers the Flying Fortress bombers led the attack, flying at an altitude which made anti-aircraft fire and fighter interference ineffective. These were followed by waves of British bombers which plastered the target area with hundreds of heavy and armor-piercing bombs. Two direct hits were observed on the *Scharnhorst*, seven on the *Gneisenau*, and the *Prinz Eugen* was straddled by sticks of bombs. Other vessels and port installations were damaged. Fifteen British bombers were lost and seven fighters. Thirty-six German planes were claimed to be destroyed. No damage was suffered by the Flying Fortress planes. This raid did a great deal to change the attitude of the British air force toward the Flying Fortress type bombing plane. Early British military missions to the United States decided against the purchase of this type of plane in favor of the smaller twin-engine bomber of limited load and ceiling. The failure of the British air force to recognize the potentialities of the four-engine high altitude bomber early in 1939 may come to be regarded as one of the great blunders of the war.

The loss of the *Bismarck* and the damage inflicted by the R.A.F. raid of July 24 discouraged further raids by German surface ships. The campaign which opened in Russia on June 22, 1941, required the services of remaining German surface units in the Baltic Sea.

British Occupation of Syria (June 8-July 12). Many factors pointed to a German invasion of Syria at the end of the Crete campaign. Marshal Pétain on

May 13 announced new steps of collaboration with the Reich. German planes landed at French airfields in Syria on the following day en route to Iraq. These were at first described as "forced landings," but finally Gen. Henri Dentz, commander in Syria, announced that terms of the Franco-German armistice called for the use of French bases and airports by German forces. This was confirmed by the French ambassador to the United States. There were rumors that German troops and equipment had been landed at the Syrian port of Latakia. It seemed apparent that Vichy-France would not oppose a German advance through Syria. Accordingly on June 8, General Wavell sent Gen. Sir Henry M. Wilson with a small British and Free French force into Syria on a mission of "occupation." Gen. Georges Catroux, leader of the Free French Forces in the Middle East, prepared for the movement by making a "declaration of Syrian independence" (to be effective after the war). Every effort was made to win over the Vichy forces by propaganda, but Pétain's orders were to resist. General Dentz had a force of three divisions and some tanks and armored cars and a few planes. The British and Free French forces did not number more than two divisions; their equipment was described as "antiquated" by American correspondents. Serious fighting took place before Damascus, there were naval engagements off Syrian harbors and bombing attacks on Syrian cities. The Allied advance was slow.

It was a sad war in which neither side fought with much spirit. The Vichy-French were merely putting up a formal resistance in order to impress the Germans, and the British and the Free French regretted the casualties they inflicted as well as the casualties they suffered. It was one of the painful but inevitable consequences of the French decision to abandon the struggle in June, 1940, on the assumption that a traditional "peace" would follow. Damascus fell on June 21, but the event passed almost unnoticed because of the German attack on Russia the following day. After Vichy's "honor" was "saved" and about 5,000 casualties were suffered by both sides, an armistice went into effect on July 12. The Syrian campaign did little to increase British military prestige in the Middle East, but it forestalled a German advance into Syria (if one had in fact been intended). It also showed that Britain was finally prepared to take the initiative in security measures involving non-British territory, a fact which became apparent later in the occupation of Iran.

The Air War in the West. Germany did not renew her all-out attempts to bomb Britain in 1941. It became apparent in the spring that her air fleets were being used elsewhere. Luftwaffe units appeared in Italy, North Africa, and the Balkans. Improvements in radio equipment for the detection of night bombers and the development of special nightfighters (Beauforts) made night bombing increasingly costly for the Germans. British plane production steadily increased in spite of bombing raids, and since Britain received a substantial part of the increasing American production, her relative strength in the air developed rapidly in 1941. The Italian air force became progressively weaker through the obsolescence of her plane types and her production fell to an estimated 400 units a month. American production exceeded 2,000 units a month by the end of the year. Churchill announced that Britain had attained equality with the German air force in the fall of 1941 and could look forward to a growing margin of superiority in 1942.

The R.A.F. had long used the "invasion ports" of northern France as a training ground for bomber crews. Gradually the sweeps into enemy territory extended. It was observed in May and early June that German fighter plane strength in northern France was diminishing. Soon British pursuit planes were operating in daylight over northern France. These developments pointed to a possible transfer of German fighter squadrons to other areas. The mystery of the "softness" of the German air strength in France was cleared up when the Germans suddenly attacked Russia on June 22.

The assumption of large-scale operations in the East required the presence of nearly all of Germany's air power. The R.A.F. was quick to seize the initiative in the West. Round-the-clock bombing attacks were carried out against installations in France and western Germany. An estimated 4,000 tons of bombs a month were dropped on enemy targets from July to December. Britain enjoyed a period of almost bomb-free life from July to September when small-scale German raids were resumed. In addition to shipping planes to Russia (the first wing of the R.A.F. reached Russia on September 14) Britain diverted enough planes from her American receipts to give General Auchinleck an initial air superiority over the Axis forces in Libya on November 18 when his attack began.

The German Luftwaffe lost two of its leaders in November; Werner Moelders, leading ace, and Gen. Ernst Udet, plane construction expert, were killed in accidents.

The following tables show the lessening of civilian air raid casualties in Britain toward the end of the year and the British and Axis plane losses for the year 1941.

CIVILIAN AIR RAID CASUALTIES IN BRITAIN

Month	Killed	Wounded
January, 1941	1,539	2,023
February	739	1,068
March	4,298	4,794
April	6,068	6,902
May	5,394	5,181
June	399	461
July	501	447
August	169	136
September	217	269
October	262	361
November	89	155
December	34	55

* Revised lists of British Air Ministry. The figures for June on show the decline of German air activity over Britain after the beginning of the Russian campaign.

BRITISH AND AXIS PLANE LOSSES •
[Jan. 1, 1941—Dec. 6, 1941]

Location	R.A.F.	Axis
Britain	38	624
Western Europe ^b	1,431	852
Middle East	498	1,979
Destroyed by Royal Navy	...	321
Total	1,967 •	3,776 •

* Revised figures of British Air Ministry. ^b Including Mediterranean. • Total plane losses for 1941, according to Air Secretary Sir Archibald Sinclair in the House of Commons, Feb. 11, 1942, were: Britain, 2,192; Axis, 3,955. Free French losses and Axis losses in Russia are excluded.

The Atlantic Front. The combined threat of Axis U-boats and bombers against Britain's Atlantic lifeline assumed menacing proportions in the spring and summer of 1941. Axis control of virtually all the Atlantic coastline of Europe plus the development of new commerce-destroying techniques accounted for the increasing peril. Long-range German bombers, operating in a giant circle from Norway around Britain to the southern coast of France, spotted for submarines which hunted

convoys in wolf packs. The location and direction of convoys were reported to submarine commanders by radio. By firing salvos of torpedoes across the course of a large convoy U-boats were certain to destroy a number of vessels. Often the attacks took place on the surface at night and were carried out both by torpedo and gunfire. Long range bombers attacked poorly protected convoys with bombs. Against these methods traditional commerce-protecting techniques were not effective. The toll of British and neutral shipping losses mounted steadily in the spring and summer of 1941. In June, 1941, the British suspended their traditional policy of announcing monthly shipping losses. This was an admission that either the losses were grave enough to conceal or that their previous policy had been ill-conceived.

The following table gives weekly shipping losses in British and neutral bottoms to April 1, 1941.

ALLIED AND NEUTRAL SHIPPING LOSSES

Week Ending	Number of Shps	Tonnage *
January 5	4	15,000
January 12	7	37,500
January 19	19	58,000
January 26	9	33,400
February 2	15	57,000
February 9	13	29,000
February 16	12	37,000
February 23	14	60,000
March 2	29	148,000
March 9	25	98,000
March 16	23	71,000
March 23	37	147,000
March 30	20	77,000
<i>Month</i>		
April	149	488,000
May	98	468,000
June	78	329,000

* These figures are based on British reports and must be considered merely as approximations.

Though no figures on shipping losses are available for the last half of the year, Admiralty statements have made it clear that they declined in August and remained at a figure approximately 1/3 that of the first half of the year. The use of improvised flying decks on merchantmen from which a single Hurricane fighter could be launched cut down bombing losses, though it entailed the loss of the fighter plane if the action was far from shore. The employment of long-range Catalina patrol planes also increased the effectiveness of convoy protection. The importance of the battle of the Atlantic was emphasized in Churchill's speech of November 12 in which he revealed that no large-scale Allied landing operations would be possible until 1943 for lack of shipping. He also announced the Hess revelation that Hitler anticipated that Britain could be brought to terms by submarine warfare. That anticipation ran counter to the American determination to keep the Atlantic trade lanes open. See SHIPPING; NAVAL PROGRESS.

United States and the Atlantic. The American stake in Britain's survival became clear after the collapse of France in June, 1940. That great disaster caused an immediate overhauling of American naval and military policy. A two-ocean navy was announced on June 22, and on September 16 the first peacetime conscription bill in our history became law. When continuous aid to the nations resisting "aggression" became impossible on cash-on-the-line conditions, the Lease-Lend Act was passed on March 11. The changing attitude of the United States was further revealed on March 30 when German, Italian, and Danish shipping in American ports was seized. To counter the possible Axis use of Greenland for submarine or weather information stations, the United States assumed "pro-

tection" of that island on April 10. A state of limited national emergency was proclaimed by the President on May 27.

The war on the Atlantic was brought home to the United States on May 24 when the American steamship *Robin Moor* was sunk by enemy action in the south Atlantic far outside the proclaimed war zone. Axis credits in the United States were frozen on June 14 and two days later their consulates were closed. An American base was established on Iceland on July 7 and bases in Ireland were projected. In August an eight-point Atlantic charter (see ATLANTIC DECLARATION) was announced by Churchill and Roosevelt after a dramatic meeting at sea. The destroyer *Greer* carrying mail to the garrison on Iceland was attacked by a German U-boat on September 4. Thereafter the tempo of attacks increased. The steamship *Steel Seafarer* was sunk in the Red Sea by bombing planes on September 5. Five days later the steamer *Sessa* was sunk. On the following day the steamer *Montana* was sunk and the President issued a "shoot-on-sight" order to the American Atlantic patrol, but the toll of sinkings went on. The *Pink Star* fell victim to a Nazi torpedo on September 22. American patrol vessels soon suffered. On October 17 the new destroyer *Kearny* was torpedoed off Iceland but reached port. The loss of eleven American sailors aroused the country, but these losses were overshadowed by the sinking of the old destroyer *Reuben James* on October 23 with the loss of nearly 100 men. As a result of these attacks and other provocations Congress repealed all remaining provisions of the Neutrality Act on November 14. American ships were henceforth to be armed and free to enter the war zones. The chain of American outposts in the Atlantic was widened on November 25, when, with the approval of the Dutch government, an American force was landed in Dutch Guiana (see SURINAM). With the extension of Lease-Lend aid to Free French forces and Turkey in the first week of December, the United States had abandoned all but formal pretenses of remaining at peace with the Axis.

Background of German Attack on Russia (June 22). No decision in the utterly unpredictable career of Adolph Hitler produced more surprise than his sudden attack upon Russia on June 22. Military critics had frequently pointed to Suez as his next objective after Crete. Indeed, the Allied invasion of Syria was made with the specific purpose of countering such a movement. General Rommel's force entrenched at Solum was expected to advance simultaneously. Yet the long-heralded drive toward the Suez did not materialize. Instead vague rumors developed about the increasing tension in German-Russian relations.

The strange flight of Rudolf Hess to England on May 12 gave rise to speculations about a possible change in Nazi war policy. Presently Winston Churchill warned Russia of an impending German stroke. On June 13 Stalin warned his nation to be prepared for all emergencies. The United States froze all Axis credits on June 14. There was a noticeable lull in German air activity in the West. On June 18 Germany signed a 10-year non-aggression pact with Turkey which protected her southern flank in case of a war with Russia. Hitler made what he later called "the most difficult decision of his life" on June 22. He declared war on the Soviet Union.

From a military point of view it was hardly possible for Hitler to launch an all-out attack on Britain without being absolutely certain of his

eastern flank. There were two German schools of thought about Russia. One was led by the famed geopolitics teacher, Dr. Karl Haushofer of Munich, who urged a friendly orientation and joint exploitation of Russian resources and living space. Dr. Alfred Rosenberg, on the other hand, advocated a conquest of Russia and the physical destruction of communism. There was a growing suspicion that Russia was using the period afforded by the pact of Aug. 23, 1939 to prepare for the ultimate struggle with Germany. Hitler and his staff decided not to wait until Russian preparations were complete. He again "placed the fate of Germany in the hands of its soldiers."

Behind the decisive step of June 22 lay the shadowy outlines of a vast continental war for world power which threatened to engulf Asia, Africa, and even America before its course was run. Its outbreak was accompanied by the German claim of fighting a sanitary war against communism. A number of allies and puppet states immediately rallied to the Nazi banner. Hungary, Rumania, Finland, Slovakia, Albania, and Italy joined in the war. The German attempt to split the democracies on ideological grounds, however, was unsuccessful. Britain and Russia signed what amounted to a virtual alliance on July 13. The United States joined in the Moscow conference in September and soon extended financial and military aid in the form of supplies to Russia.

Alignment of Forces in the East. Though the exact numbers of German and Russian forces were not known, it was estimated that Germany had concentrated at least 150 divisions against Russia in June. These were supported by an estimated 15,000 tanks and four fleets of the Luftwaffe. They were divided into three army groups. The northern army group consisting of the 18th and 16th armies, operated along the Baltic in the direction of Leningrad under the command of Field Marshal Ritter von Leeb. The central group made up of the 4th and 9th armies operated from Poland toward Minsk, Smolensk, and Moscow under command of Field Marshal Fedor von Bock. The southern army group composed of the 6th and 17th armies operated against the Ukraine under Field Marshal Gerd von Rundstedt. The Rumanian forces commanded by Gen. Ion Antonescu were under orders of Rundstedt. In the far north Finnish forces under Marshal Baron Mannerheim cooperated with small German forces led by Gen. Nickolas Falkenhorst. Italian forces which later appeared on the Russian front were commanded by Gen. F. Ingales, and the Spanish Blue Division was led by Gen. A. Munoz Grande. Hitler remained at his field headquarters in the East throughout the first stages of the war and took the unusual step of issuing communiqués directly from his personal headquarters.

The Soviet Union always maintained strict secrecy about its military forces. It might be assumed that the weaknesses revealed by the ill-starred Finnish campaign had been corrected by June 1941. Her active army and first line reserve was estimated at 175 divisions with an additional reserve of 8,000,000 partially trained men. The amount of her useful military equipment was the most important question mark, for the war had demonstrated the weakness of mere numbers. The quality of Russian military leadership was thought to have suffered from periodic political purges and from the institution of political commissars with the troops. Her tank force was estimated at from 10-20,000 tanks. The Russian air force was large but was thought to be of doubtful quality. Marshal S. Timoshenko was Commissar of Defense; Gen. K. A. Meretskov, chief of staff.

Predictions of an Early Russian Collapse. Fighting began on a 2,000-mile front from northern Finland to the Black Sea on June 22 amid predictions of an early Russian defeat. Military "experts" in Allied and neutral countries estimated Russian capacity to resist at from six to twelve weeks. It was argued that the German general staff would hardly undertake an invasion project which could not be completed before winter. These estimates were inspired by the speed of previous campaigns and by the almost legendary reputation of the Nazi army for efficiency in modern war. They were also based upon a false interpretation of the Finnish war of 1939-40 and upon an ignorance of Russian military preparations and war potential. It was only when the main military might of the Soviet Union was slowly applied, and when the two revolutionary military efforts met head on, that the full implications of the Russo-German struggle and its relation to the World War could be envisaged.

The first reports of operations in the East seemed to confirm the forecasts of a Russian defeat. A fifty-mile withdrawal of Russian forces from the frontiers was announced. Though the main German objective was the destruction of Russian field armies, the course of the war can best be traced in terms of areas occupied and cities taken. The wildly divergent reports of the belligerents on losses suffered and inflicted on the enemy do not give (at this stage) a reliable measure of the military results obtained.

Initial Operations in the East (June 22-July 11). Rapid advances followed the German declaration of war on June 22. Grodno fell on June 23 and Brest Litovsk the following day. Then for six days the German Government withheld information on operations in the East, promising a sweeping victory communiqué would shortly follow. After having postponed the promised communiqué three times, it was finally delivered on June 30 in twelve parts each introduced by a fanfare of martial music. The encirclement and destruction of two entire Soviet armies at Bialystok, the destruction of 2,583 planes, 2,223 tanks, 2,400 armored cars, and gains in the Baltic area were claimed. It was apparent that the familiar technique of rapid deep penetrations by tank divisions aiming at the encirclement and destruction of small units of the Red army was being employed. Minsk was reached on July 1, Borisov and Brobrusk on July 3. This placed the armies of Marshal Bock within 200 miles of Moscow.

It was after these first spectacular advances that the unorthodox character of Russian fighting revealed itself. In normal war areas behind the enemy advanced positions could be regarded as conquered, but Russian irregulars and guerrilla fighters continued to operate against German outposts and communications long after the front had advanced. Though claiming a total capture of 300,000 prisoners, and the destruction or capture of 7,000 Russian planes, 4,000 tanks, and 3,000 guns, the German high command was forced to halt briefly for reorganization on July 11. Up to this time the Russians had not launched a major counter attack.

Operations July 15-September 1. The German drive was resumed on July 15 with rapid advances on all fronts. The so-called "Stalin line" (a loosely defined defense area in depth back of the old Russian frontier) was said to have been broken "at all decisive points." The outskirts of Smolensk were reached on July 17, but Russian resistance in this sector hardened and the city was not entirely in German hands until August 15.

On the Baltic front the armies of Marshal Leeb occupied Estonia, Lithuania, and Latvia in July

and August. Naval operations were undertaken against the Russian-held islands of Moon, Dagö, and Oesel. On August 12 Hitler appointed H. Lohse as governor of the newly created Ostland province, showing that the conquest of the Baltic states was complete. Thereafter the armies of Marshal Leeb advanced against Leningrad in cooperation with Marshal Mannerheim's Finnish troops who advanced against the Karelian isthmus. In the extreme north General Falkenhorst's troops cut the Leningrad-Murmansk railway at Kandalaksha and attacked the port of Murmansk.

Gradually the territorial objectives of the three German army groups began to center around the cities of Leningrad, Moscow, Kiev, and Odessa. The most dangerous advances in August were made on the southern front. Kiev was reached on August 8 and Odessa on August 13. Since the Russians were fighting a delaying action and had adopted a "scorched earth" policy, these cities were defended. Kiev resisted until September 20 and Odessa until October 16. The garrison of Kiev (estimated at 400,000 men) was lost, but part of the Odessa garrison was withdrawn by sea. The major forces of the Russian southern army were withdrawn across the Dnieper river on August 16, and the great hydro-electric plant at Dniepropetrovsk was dynamited on August 23. Perhaps General Budenny's leadership had something to do with the rapid deterioration of the Russian military position in the south. He was replaced on October 24 by Marshal Timoshenko who was transferred from the Moscow front. At the end of August the German forces had captured Nikoleav on the Black Sea coast and threatened the Donetz basin and Crimea.

Due to the superior network of railways and the proximity to war industries Russian resistance in July and August was more successful on the central and northern fronts. There were heavy Russian counter attacks on the Moscow front near Smolensk. The principal German advance was made at Gomel. In the north Marshal Leeb captured Novgorod on August 26, Tallinn on August 29, and the Finns occupied Viborg on August 30.

The Northern Front (September 1-December 31). Axis lines of investment were drawn around Leningrad by the capture of Taipale (September 2—by the Finns) and Krasnoe Selo by the Germans on September 3. The fall of Schlüsselburg, the great railway center, on September 9 brought Leningrad within artillery range. Systematic bombardment of the city's outskirts began on September 10. Marshal Voroshilov put the entire civilian and military population of Leningrad at work on the defenses. From mid-September on operations around Leningrad took on the character of siege warfare with occasional Russian counter attacks. General Khorzin replaced Voroshilov as commander of the Leningrad garrison on October 24. Budenny and Voroshilov were detailed to supervise the training of Russian reserves. The Leningrad defenders joined in the general Russian counter attacks beginning on December 6 and made substantial progress toward clearing the Leningrad-Moscow railway line.

Central Front (September 1 to December 31). Russian counter attacks in the Smolensk and Bryansk sectors of the central front slowed up the German advance on Moscow in September. When these subsided in the first week of October the German armies launched a series of extremely powerful blows on this front. They were introduced by Hitler's speech of October 3 in which he promised the German people that the mighty attacks underway would crush all Russian military resistance. Orel fell into German hands on October 9. This gave Dr. Otto

RUSSIA'S OUTER BASTIONS FALL BEFORE THE NAZI ADVANCE

Courtesy of The New York Times

Dietrich occasion to assert on October 10 that serious Russian military resistance was definitely at an end. He pledged his personal word to press correspondents as to the truth of these revelations. For a time it seemed that his words might be vindicated. A serious deterioration of the Russian military position followed. Bryansk fell on October 13, Vyazma on October 14, and Tula on October 16. The seat of the Russian Government was transferred to Kuibyshev on October 17. But snow began to fall on the Moscow front on October 23. General G. K. Zhukov replaced Marshal Timoshenko as commander of the central front on October 24. Stalin stayed in Moscow in order to encourage the defenders and ordered a foot-by-foot defense of the city. By the end of October it was clear that the first great German effort would fail to capture the former Russian capital.

The final German drive on the central front began on November 15 after local Russian counter attacks. Volokolamsk was reached on November 22, and a German spearhead, which passed up Kalinin on November 25, reached Klin, only 31 miles from Moscow. Heavy assaults followed in the Mozhaisk sector from November 25-28, but the battle passed its crest at the end of the month with Russian counter attacks developing at all menaced points. The great German effort to knock Russia out of the war by capturing Moscow and destroying Russian armies had failed. The troops on the central front had to be withdrawn to areas where better shelter existed. Sub-zero weather lowered German morale already affected by very heavy losses and failure. Stalin's country had done what no other nation had succeeded in doing, it slowed up and finally turned back the hitherto invincible German Wehrmacht.

And it was the failure of the German attacks on the central front in October and November which upset the whole plan.

Southern Front (September 1–December 31). While the decisive campaign of the war was being waged on the central front from September to December, the most spectacular advances were made by the Germans on the southern front. Marshal Rundstedt's armies crossed the Dnieper at many points early in September and advanced against Chernigov, which fell on September 13. Kiev, which had been under siege since August 8, surrendered on September 20 with a loss of about 400,000 men. Poltava was captured on the same day, and two days later the German troops reached the Sea of Azov. For nearly a month they were held up in their efforts to break through the front at Perekop leading to the Crimean peninsula. Other units of Rundstedt's command captured Mariupol on October 8, Taganrog on October 22, Stalino on October 22, and Kharkov on October 26. These advances menaced the extremely important industrial resources of the Donetz basin.

The penetration of the Crimean peninsula was achieved on November 1 when parachute troops aided in breaking through the defenses at Perekop. The Russian forces on the Crimea withdrew to defensive positions at Kerch and Sebastopol. Sumferopol, the capital of Crimea, fell into German hands on November 3. Kerch held out until November 18, and Sebastopol continued to resist until the end of the year. Assuming the offensive on the Crimean front, Russian troops recaptured Kerch on December 30.

A German advance into the Donetz region led by General Kleist captured Rostov on November 23. Further advances by this army were met by a determined Russian counter attack which led to the recapture of Rostov on November 30. This event was regarded as singularly important since it was the first major Russian city recaptured from the enemy. Its importance was emphasized by the further retreat of the German armies in the south to Taganrog on December 4. The German retreat in the direction of Mariupol continued. At the end of the year Russian armies in the south were approaching Kharkov and Stalino. Pressure on the Donetz Basin was being relieved and Russian forces on the Crimea were passing to the counter offensive.

Russian Counter Offensive (December 3–31). The German decision to postpone the conclusion of the Russian campaign until spring was not a matter entirely dictated by their own choice. From October 3–December 3 the German armies on the central front had been engaged in the greatest military operation in history. At tremendous cost they had pushed to within 31 miles of Moscow, but they failed to take the city, and they were ill-prepared for a winter campaign. Sub-zero cold and heavy losses affected the morale of troops. The enemy which had been repeatedly described as "destroyed" now took the offensive from Leningrad to the Sea of Azov. Showing great aptitude for winter fighting and unsuspected reserves in war equipment, the Russian troops pushed back the invader on all fronts. Both Hitler and Goebbels made frank appeals to the German people on December 21 for any kind of warm garments for the troops in the East. Hitler frankly admitted that the enemy was superior in manpower and equipment on the eastern front. Marshal Fedor von Bock, commander-in-chief on the central front was made a scape-goat for the defeat. Finally on December 23 Hitler announced the retirement of Marshal Walther von Brauchitsch, head of the Wehrmacht. Following "an inner call" Hitler announced that he had taken

over the supreme command of all the armed forces in his own person. The line of furthestmost German penetration into Russia and the line on December 31 is shown on the accompanying map.

Estimated Casualties on the Eastern Front. Except in its early stages the Russian campaign was unlike any other war conducted by the Wehrmacht. Here for the first time they were opposed by a people prepared to wage total war. Though Germany possessed a qualitative superiority in planes and perhaps in tanks, she did not possess marked superiority in quantity of equipment, and was inferior in potential military manpower. From October on the losses on both sides were extremely heavy. Alexander Shcherbakov, Director of the Soviet Bureau of Information, placed Russian casualties up to October 6 at 1,128,000 men killed, wounded, and missing. In the six weeks of heavy fighting between this date and November 20, he admitted that Russian casualties had mounted to a total of 2,122,000 men killed, wounded, and missing. Nearly a million casualties had been suffered in six weeks. These losses exceeded those of the most intense periods of the First World War.

German losses cannot be accurately estimated. Hitler's announcement on December 11 that the German losses on the eastern front up to that time totalled only 162,314 killed, 517,767 wounded, and 33,324 missing seemed utterly fantastic in the light of the German retirement to new positions and his decision to abandon the offensive until spring. Field observers of the U.S. Army in Russia estimated German losses to December 11 at 1,300,000 killed and 2,600,000 wounded and missing. Somewhere between these estimates was the true picture of German losses in the East. Hitler's claim in December of a total bag of 3,800,000 Russian prisoners, the destruction or capture of 21,000 tanks, 32,000 guns, 17,375 planes seemed equally fantastic. Had the Russian army suffered such losses in personnel and material, it would hardly have been possible for that army to assume the counter offensive on all fronts in December.

Russian Economic and Industrial Losses. Since the conduct of modern war depends primarily on industrial output and economic resources, the extent of Russian losses in these elements should be noted. By the end of the year, Russia had lost the entire Ukraine with approximately 18 per cent of her prewar industrial output and tremendous agricultural resources. Leningrad with 13 per cent of her industrial resources was under siege. Moscow with 15 per cent of her total industrial resources was within range of German bombers. Part of the Donetz Basin with 60 per cent of Russian iron ore and 50 per cent of her coal output was still in enemy hands, and might be lost to German advances in the spring. The oil producing areas of the Caucasus were still safe from enemy threat, but the Russian transportation system had been heavily taxed by war demands. How extensively the Russians had been able to transfer war industries from menaced area in the west to more secure locations in the east could not be estimated, but their plans and organization for total war were far better than anything achieved in democratic countries.

British and American concern for Russian supplies took the form of a conference in Moscow during the first weeks of September. A broad program for Allied aid to Russia was mapped out. Unfortunately the problem of transporting supplies to Russia was complicated by enemy action in cutting the Leningrad-Murmansk Railway. This left only Vladivostok and Archangel as useful ports of entry. Neither were ice-free in winter, and Japanese bel-

ligerency soon ruled Vladivostok out. These considerations prompted Allied action in Iran in order to safeguard a southern route for war supplies to Russia.

Anglo-Russian Occupation of Iran (August 26–September 16). Britain followed her occupation of Syria by demands that Axis tourists, engineers, and agents be expelled from Iran. When evasive answers were returned, a joint Anglo-Russian invasion of the country took place on August 26. British troops took over control of the oil pipeline at Abadan and Bandar Shahpur. Russian troops occupied Tabriz. After an overturn of the government, the new premier, Ali Furanghi, appealed for an armistice on August 29. When the armistice terms calling for the speedy exile of Axis sympathizers were not carried out, and local unrest threatened the Shah's position, Allied troops occupied Terehan on September 16. Riza Shah Pahlevi abdicated in favor of his son. As a spring campaign in Russia loomed as a certainty, and as the war spread to new theaters, the importance of the Iranian route to Russia increased. Efforts were undertaken to increase the capacity of ports and improve the single-track trans-Iranian railway. Gen. Sir Godfrey Rhodes was placed in charge of maintaining communications in Iran. See map and text, p. 289.

Changes in British Commands (July 1, November 26, December 25). After the Russian war was a week old, and shortly after his ill-starred effort to drive the Axis forces from Solum on June 15, Gen. Sir Archibald P. Wavell, was abruptly transferred to the India command. Sir Claude Auchinleck, a 54-year-old Scotsman, who had served at Narvik and as commander-in-chief in India, replaced him in the Middle East Command. The British movement toward securing younger officers for fighting commands appeared in the appointment of 44-year-old Gen. Neil M. Ritchie to succeed Gen. Sir Alan Cunningham as commander of the VIIIth British army in Libya on November 26. Gen. Sir John Greer Dill, who retired for age as Chief of the Imperial General Staff on December 25, was replaced by 58-year-old Gen. Sir Alan Brooke, a tank man who had distinguished himself in Flanders. At the same time Gen. Sir Archibald Nye (45 years) was made vice chief of the imperial general staff. Gen. B. C. T. Paget (54) replaced General Brooke as commander of the home forces.

British Offensive in Libya (November 18–December 31). The gradual reinforcement of British troops in Egypt and the arrival of American lease-lend war equipment in the Middle East gave General Auchinleck a margin of superiority over Axis troops in Libya in the matter of tanks and planes. The burning sands of north Africa were to provide the first testing ground for American tanks. American planes had already been tried in war but never on so large a scale in a single theater. The location of General Rommel's Axis Korps at Solum with its veteran tank formations constituted a continual threat to Egypt and the Suez. British public opinion throughout the summer of 1941 clamored for the establishment of a new front to relieve German pressure on Russia. These demands were met in part by the British offensive against Rommel which began on November 18.

Though possessing some similarity to the situation which faced General Wavell in December 1940, the military position on the Egyptian-Libyan border in November 1941 was fundamentally different. Tobruk, some 70 miles behind the enemy's lines, was still in British hands after a long Axis siege. From April to November the Axis had built up a strong front running from Solum-Halfaya Pass-Sidi

Omar-Maddalena-Jarabub. It was wired and entrenched. Behind it Axis mechanized forces (the Italian "Ariete" division, and two German armored divisions—the 15th and 21st) were concentrated. They constituted the real defense of Libya and the real threat against Egypt. In December 1940 General Wavell possessed a small tank force but operated against a weaker enemy. In November 1941 General Auchinleck possessed a strong tank and air force, but operated against an enemy well provided with both these weapons. Unless the German tank and air force could be destroyed no decisive victory could be achieved in Libya.

Only one member of the victorious British Middle East team of December 1940 was still in this theater. He was the war-experienced admiral of the Eastern Mediterranean Fleet, Sir Andrew B. Cunningham. General Auchinleck, who had replaced Wavell on July 1, was new to the front. In command of the VIIIth British army, which was to make the assault, was General Sir Alan Cunningham (brother of the admiral), who had distinguished himself in the conquest of Ethiopia. Vice-Air Marshal Sir Arthur Coningham commanded the R.A.F.

The British attack of November 18 attained a measure of strategical surprise. General Rommel apparently misjudged the strength of the British in mechanized equipment and planes. The British gained immediate command of the air and their concentrations of tanks broke through the Axis line in the south between Maddalena and Jarabub while a holding attack was made by Indian infantry on the Solum-Sidi Omar front. Favored by initial surprise British tank formations raced north and westward apparently cutting off Nazi units and severing their lines of communication. One British motorized unit headed westward for the Gulf of Sidra north of El Agheila. On November 20 British units were within ten miles of Tobruk. The encirclement of Axis tank forces east of this position seemed complete and their destruction certain. Optimistic reports on the course of the battle were issued from Cairo. But when the main force of Axis tanks were encountered near El Rezegh a battle of confusion ensued in which British plans were nullified.

General Rommel proved himself to be a resourceful tank commander. Though cut off from some of his supply bases, he handled his tank forces with such skill and resolution that he was ultimately able to fight his way out of the British trap, and though suffering heavy losses in machines (the Italian "Ariete" division in particular) made his way westward on November 25 toward Gazala and Derna. The Axis facilities for supply and repair of tanks apparently were much better than General Cunningham had expected.

The following day General Cunningham was replaced by Gen. Neil Ritchie. Both sides brought up reinforcements for the wearing down struggle which followed. From November 26 on the new British commander sought to destroy enemy tank formations in a stand up battle of attrition. By December 11 Rommel had made good the retreat of what remained of his tank force to El Gazala, leaving Axis troops and garrisons at Bardia and Solum still resisting. The long-suffering British garrison at Tobruk was finally relieved on that day (after earlier contacts had been lost). Savage rear-guard actions were fought in the vicinity of El Gazala from December 15–17, in which the Axis tanks sought to escape destruction by further retreat. On December 18 it was announced in Cairo that a total of 10,000 Axis prisoners had been taken in the first month of the offensive.

Meantime British naval units operated relentlessly against Axis lines of communication in the Mediterranean. British and Dutch destroyers surprised a convoy off Cape Bon on the night of December 11 and sank two cruisers thought to be the *Alberto di Gussano* (5,000 tons) and the *Alberico da Barbiana* (5,000 tons), a destroyer, and three transports. At the end of December it was announced that more than 60 Axis ships had been sunk in the Mediterranean since November 18. It appeared that the battle over Libya might hang on the ability of either force to ensure the supply of reinforcements to the battle front.

General Ritchie renewed the battle with great vigor on December 19. British tanks broke through Axis defenses at Derna capturing the airport and nearly 100 planes. The town of Derna fell on December 21 and the Axis retreat toward Bengazi began. Barce fell on December 23, and British troops entered Bengazi on December 25 well ahead of General Wavell's schedule in 1940. General Rommel retreated with all his available armored units to Agedabia some 90 miles south of Bengazi, and, as the year ended, new British strokes aimed at the destruction of his tank forces were under way.

The assumption of supreme command by Hitler on December 23 pointed to the development of new military movements. It was felt that some bold stroke such as a move through Spain to north Africa or an invasion of Turkey might be attempted in order to offset the defeat in Russia. These possibilities gave added importance to the life-and-death battle being waged in Libya. In order to forestall either of these moves, it was necessary for the British to complete the destruction of Rommel's army in the shortest time possible.

Second World War Begins (December 7). Tension in the Far East mounted steadily during the summer and fall of 1941. American commercial and financial restrictions were imposed on Japan while the latter used her position in French Indo-China to menace British, American, Dutch, and Chinese interests. When negotiations between the United States and Japan threatened to break down, special emissary Saburo Kurusu was sent to the United States late in November to keep them going. There were other indications that the war, once confined to the continents of Europe and Africa, would spread. Vichy France was still involved in tortuous negotiations with Germany which threatened to place her African bases and fleet at the disposal of the Axis. Efforts of Britain and the United States to divorce Finland from the Axis were ineffective. Britain finally declared war on Finland, Hungary, and Rumania on December 7. But this was merely a formality and did not involve military action. Far more important and real was the sudden and treacherous Japanese attack on Pearl Harbor which coincided with these steps.

Japan Strikes Without Warning. While her diplomatic representatives were blandly talking to the American Secretary of State, Japanese bombers operating from carriers which had escaped American patrols launched a sudden and savage attack on the American naval base at Pearl Harbor and on the military establishments on the island of Oahu. Coming in the dawn of a Sunday morning when the United States was at peace and still maintaining diplomatic relations with Japan, the attack caught the army and navy "off the alert." Ships were attacked by torpedo planes and bombers. Hangars and airfields were bombed and machine gunned. Fuel tanks and military installations were destroyed. The Japanese planes were able to return to their carriers and make repeated attacks on the Ameri-

can base. The news staggered the world and jolted the American people out of their isolationism and complacency. Then Japan declared war. The whole procedure was a repetition of the Japanese attack on Port Arthur in 1904.

Censorship concealed the extent of American naval and military losses for a time, but when Sec-

AMERICA'S HAWAIIAN STRONGHOLD

retary of the Navy Frank Knox returned to the United States on December 14, after a flight to Hawaii, it became clear that naval losses were severe. They included: the battleship *Arizona* (32,600 tons) sunk, the battleship *Oklahoma* (29,000 tons) capsized, the target ship *Utah* (19,000 tons) sunk, the destroyers *Shaw*, *Downes*, and *Cassin* (all 1,500 tons) sunk, and the minelayer *Oglala* (4,200 tons) sunk. Other vessels suffered damage. Losses in planes, hangars, and military equipment were heavy. The surprise at Pearl Harbor caused a shakeup in the army and navy commands in Hawaii.

A presidential committee headed by Justice Owen Roberts of the U.S. Supreme Court was appointed to investigate the conditions under which the surprise attack on Pearl Harbor took place. Rear Adm. Husband E. Kimmel, Commander-in-Chief of the U.S. Fleet (and active commander of the Pacific Fleet) was replaced by Rear Adm. Chester V. Nimitz, Chief of the Bureau of Navigation. Lieut. Gen. Walter C. Short, commander of the Hawaiian Department of the U.S.A., was replaced by Lieut. Gen. Delos C. Emmons, commander of the Air Force Combat Command, Bolling Field. Maj. Gen. Frederick Martin, commander of the U.S. Army Air Force at Hawaii, was replaced by Brig. Gen. C. L. Tinker of the 3rd Interceptor Command, Drew Field. On December 20, Adm. Ernest King, who had been serving as commander of the Atlantic Fleet, was named Commander-in-Chief of the entire fleet, including the Pacific Fleet.

Vast Extension of the Conflict. The Japanese declaration of war of December 8 on the United States and Britain brought in its wake a tremendous extension of the conflict. In quick succession, one after another, states exchanged declarations of war upon each other. Germany and Italy declared war on the United States on December 11. By that time the nations of the world had ranged themselves as shown in the table at the top of page 751.

Japan's Far Flung Offensive in the Pacific. The treacherous, but bold and carefully prepared Japanese stroke at Pearl Harbor was timed to coincide with a vast series of blows designed to secure Japanese control of Far Eastern waters. The extent of these

movements indicated that plans had been prepared for weeks if not for months in advance. Hong Kong, the nearest British outpost, was immediately attacked. Japanese troops took over the International Settlement in Shanghai. Attacks were delivered by sea and air forces at Guam, Wake, Midway, and the Philippines. A large-scale Japanese landing took place on British Malaya and the invasion of Thailand was begun. Japanese staff work and fifth column technique was shown to be painfully effective as initial successes followed the assumption of these widespread attacks.

Japanese Grand Strategy. The grand objective of all these Japanese attacks was to render Allied sea power impotent in the Pacific by capturing the advanced American naval bases at Manila and Olongapo, and the British base at Singapore. If these bases were rendered unsafe for British and American ships, there could be no effective barrier against the ultimate conquest of the Dutch East Indies, Burma, and the Philippines. China would be isolated and the supplies of war materials so necessary to the continued resistance of her armies would be stopped. To accomplish this great task Japan had the third largest naval force in the world, a large veteran army, and an air force of unknown size whose effectiveness was to provide one of the major surprises of the war. Against her was the lack of fundamental war materials and natural resources. Experts conceded that she might possess, even after more than four years of war against China, sufficient oil, rubber, and other war resources to last for one or at most two years. She had to win quickly or not at all.

In the way of her attainment of these objectives was a small American Asiatic Fleet based on Manila and commanded by Rear Adm. Thomas C. Hart, and a Far Eastern American Army in the Philippines consisting of some 125,000 American and Philippine troops commanded by Lieut. Gen. Douglas A. MacArthur. Though not fully equipped for modern war and not completely trained these troops soon demonstrated high military qualities. The Dutch East Indies had a small army under Lieut. Gen. Hein ter Poorten, a small but efficient navy and air force. Guarding the great British naval base at Singapore was a force of Imperial troops estimated at 125,000 men. Unfortunately the British

Eastern Command was lacking in modern aircraft and anti-aircraft equipment. Singapore was well-defended against an attack from the sea, but not so well protected against assault from the land. Two British capital ships were reported in this base at the outset of war. The British defense of Malaya and Singapore was entrusted to Air Marshal Robert Brooke-Popham. Commanding the Empire troops under him on Malaya was Maj. Gen. A. E. Percival.

Japanese Campaign in Malaya (December 8-31). Despite the concern of Americans in the Japanese landings which took place on December 10 on the Philippine islands, as well as repeated attacks on Midway and Wake islands (Guam fell on December 12), the most serious threat to the Allied position in the Far East was to be found in the campaign in Malaya. Hong Kong, which held out until December 25, was impossible to defend, but the British had been planning for an attack against Singapore for some time. Japanese forces from French Indo-China swept into Thailand on December 8 almost without resistance. Simultaneously Japanese landing parties were thrown ashore at Singora and Patani near the Malayan frontier. Two divisions were estimated to have landed unopposed and advanced rapidly toward Kota Bharu where they captured the airfield on December 10. Since transports and warships were concentrated in this area to ensure the flow of Japanese reinforcements, British naval forces at Singapore moved out to intercept them.

Two British capital ships, the *Prince of Wales* (35,000 tons) and the *Repulse* (a 32,000-ton battle cruiser), commanded by Adm. Sir Thomas Phillips left Singapore without air support, expecting to encounter Japanese battleships. They were observed by Japanese patrol planes and attacked at 11:10 a.m. on December 9, by flights of Japanese bombers. Due perhaps to fundamental lack of coordination between the British commands, or perhaps on account of professional pride, Admiral Phillips did not radio for air support until 11:45 a.m. Before British land-based pursuit planes could arrive at the scene of action (about 150 miles north of Singapore) the *Prince of Wales* and *Repulse* were subjected to repeated torpedo plane and bombing attacks. In less than two hours Japanese pilots had done what no other air force had ever accomplished: they sank two capital ships. Fortunately a large part of the crew of both vessels were rescued. This was the greatest British naval loss of the war. It altered the naval situation in the Far East profoundly and adversely. Combined with the effectiveness of Japanese air raids on Hawaii and the Philippines it made a revision of Allied opinion about Japanese military and naval aviation necessary.

Rapid advances by specially trained and equipped troops brought Kedah province into Japanese hands by December 20. The British garrison evacuated Penang, the island naval base on the western shore of Malaya, without fighting on December 22. Action on the Malay front diminished as the British withdrew to a defensive position on December 23, along the Krian River in the northern Kelantan province and to Kuala Krai in Trengganu.

The progress of the Japanese invasion of Malaya (100 miles in two weeks) gave rise to widespread criticism of the British command in the Far East. Civilians and experts alike compared the resistance of Hong Kong (16 days) to the surrender of Penang virtually without firing a shot. They pointed to the failure of the retreating British forces to destroy stocks of food, rubber, and other materials valuable to the Japanese.

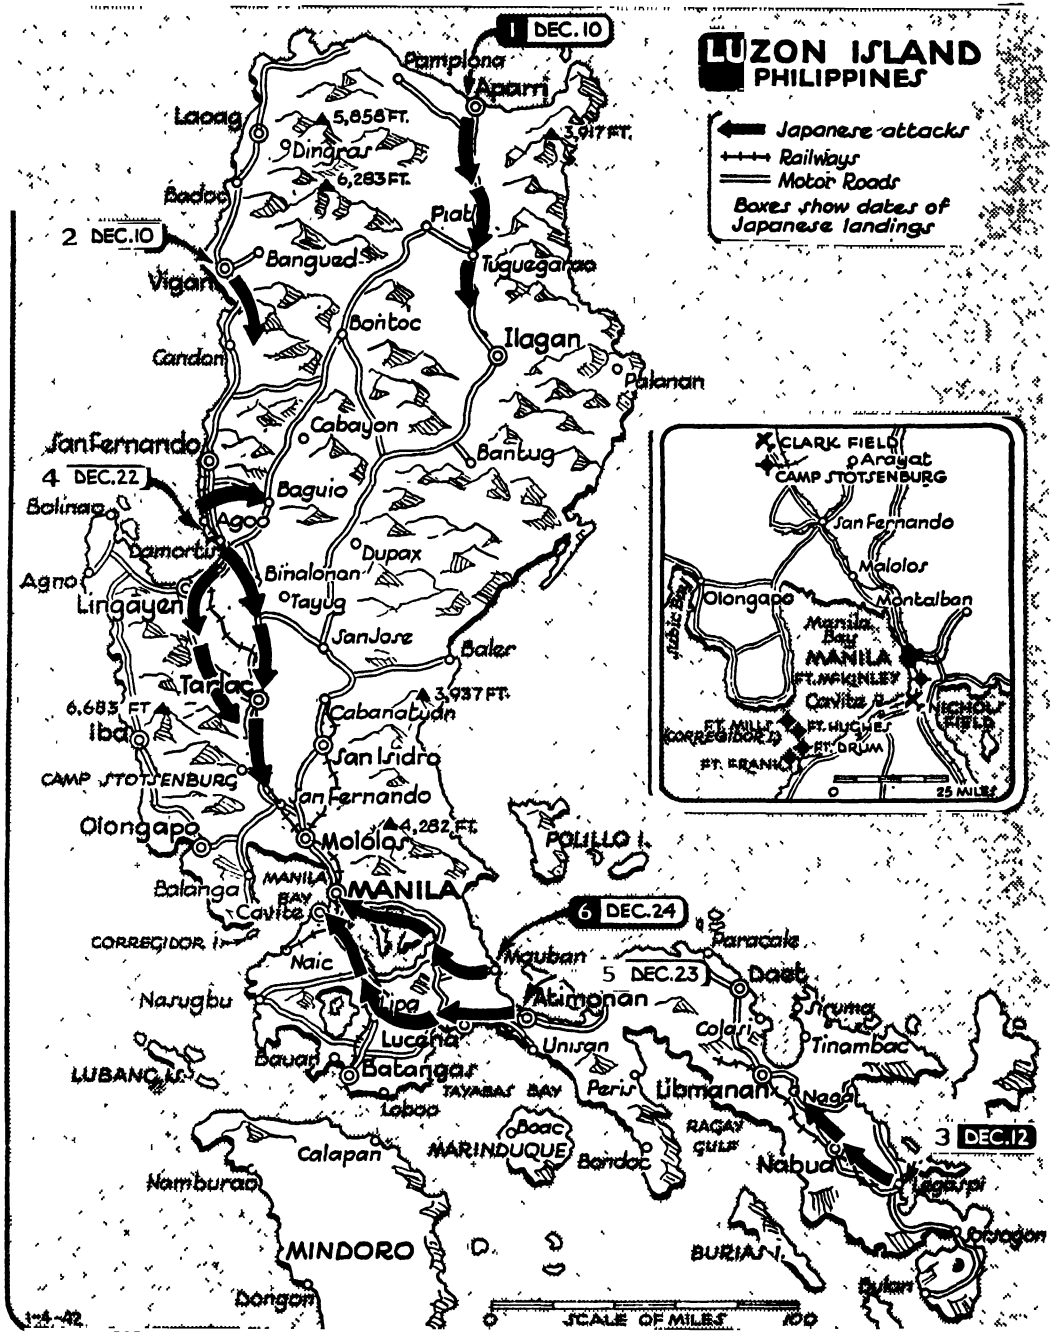

JAPANESE ADVANCE DURING DECEMBER, 1941

Criticism of the British command in the Far East reached a new peak after the fall of Kuching, capital of British Sarawak, on December 26. It led to an abrupt replacement of Air Marshal Brooke-Popham by Lieut. Gen. Sir Henry Pownall, former Vice Chief of the Imperial General Staff. Lieut. Gen. D. K. McLeod was removed from the Burma command and replaced by Lieut. Gen. T. J. Hutton, former chief of staff to General Wavell.

The Japanese forces assumed the offensive in Malaya on December 29 and captured the tin center of Ipoh. Though the Japanese invaders were

still some 200 miles from Singapore at the end of the year, grave concern was felt for its safety. It seemed ironical that in the first three weeks of the war the sharpest blows dealt the Japanese came from the Dutch navy and air force which averaged nearly a Japanese ship a day.

Conquest of Guam and Wake Islands (Dec. 10-24). Japanese attacks on Guam, Wake, and Midway Islands followed almost immediately after the surprise bombing of Pearl Harbor. Protected by small garrisons of naval ratings and marines, these islands were valuable intermediate air bases on the trans-

Courtesy of The New York Times

THE PHILIPPINE CAMPAIGN, DEC. 10-31, 1941

Pacific route. Congress had repeatedly refused to fortify these islands for fear of antagonizing Japan. They could not be adequately defended and were the first American possessions to fall into Japanese hands.

After repeated air raids Japanese troops were landed on Guam on December 10 and in two days fighting reduced the island's small garrison. Wake Island put up a more prolonged resistance. It was defended by a marine garrison of 400 men under

Major James P. Devereux. A Japanese cruiser and a destroyer were sunk by its guns on December 13. Its small force of pursuit planes and anti-aircraft equipment was kept in action until only two planes and three guns were in condition to fight. Even then the garrison sank two more destroyers and took its toll of enemy planes and troops. All radio contact with the island was broken on December 24, and the island was considered lost. The last message received from the Wake garrison was in the

best tradition of the Marine corps. It read: "The issue is still in doubt."

Initial Stage of the Philippine Campaign (Dec. 10-21). Japanese bombing attacks on American flying fields, army camps, and naval bases preceded the landing of troops on the island of Luzon. Shore-based aircraft operating from Japanese island bases rained destruction over a wide area. Their main objective in these raids was to use up and destroy American planes, disrupt supply services, and disorganize military plans. Then, on December 10, Japanese naval units and transports appeared off northern Luzon and landed troops at Aparri and Vigan. Despite marked inferiority in numbers the United States Army planes made effective attacks. One four-motor bomber piloted by Captain Colin Kelly sank the Japanese battleship *Haruna* (29,000 tons) and other planes seriously damaged another battleship of *Kongo* class. Several transports were sunk or badly damaged. Despite these losses the Japanese forces made good their foothold on northern Luzon and soon improvised landing fields. On December 12 a similar landing was made in southern Luzon at Legaspi, and an attempted landing was repulsed in the Gulf of Lingayen. Eight days later another Japanese landing was made at Davao on the island of Mindanao.

Main Japanese Campaign for Manila (Dec. 21-31). The widespread Japanese landings described above were diversions for the main Japanese attacks which were launched in the Gulf of Lingayen on December 21, and in the Lamón Bay region from December 22-28. The trial landing of the Japanese in the Lingayen area which was "repulsed" on December 11 was probably intended to feel out the defenses. A fleet of 80 transports convoyed by naval vessels and aircraft appeared in Lingayen Gulf early in the morning of December 21, and although attempted landings were repulsed at two points with heavy losses, a force of from six to eight divisions was landed at other points. These forces soon made contact with Japanese patrols which had worked their way down the beaches from Vigan. Japanese tanks and artillery appeared on the front and operations on a considerable scale developed. While this battle was in progress other large-scale Japanese landings took place at Atimonan on December 23, and Mauban on December 24. The defense of Manila was then threatened from north and south.

American and Philippine troops in both theaters put up a stout delaying action. Japanese forces from Lingayen reached Baguio, the summer capital of the island, on December 24, and Binalonan on December 25. Enemy forces from Aparri reached Tuguegarao the same day. A constant flow of reinforcements reached the Japanese troops until it was estimated that 200,000 men were on Luzon by December 27.

Manila Declared an Open City. Japanese air raids which at first were limited to military targets on the Philippines soon were directed at Manila. The absence of suitable bomb shelters and the inflammable character of the old "walled city" made these attacks costly in terms of life and property. In order to spare the civilian population from further losses, all military establishments were withdrawn from the city on December 26, and it was declared an open city in keeping with the Hague convention of 1907. But the air attacks continued with unrelenting intensity. The Japanese high command offered cessation of air raids on condition that all Philippine troops in the field surrender. As military operations steadily went against the defenders President Roosevelt, on December 29,

pledged the entire resources of the United States to redeem the liberty and independence of the Philippine people.

The year ended with heavy Japanese attacks in the north and south. The official communiqué of December 31 placed the line of resistance in the south at Dolores some 30 miles from Manila, and at Zaragoza 65 miles north of Manila. The communiqué admitted that enemy dive bombers practically controlled the roads, that the Japanese were employing "great quantities of tanks and armored units," and that the American lines were being pushed back. The situation on the southern front seemed especially critical on December 31, and Manila seemed doomed to fall into Japanese hands.

Summary of the Far Eastern War. Japan won all the initial battles of the war in the Pacific. Striking without warning after months of careful preparation, masked by diplomatic overtures for peace, utilizing French bases in Indo-China acquired from a craven government in Vichy, she surprised the whole world with the savageness of her attack, the quality of her war equipment, and the far-reaching character of her plans of conquest. By the end of the year, it was clear that she aimed at the encirclement of Singapore. After driving American forces from the Philippines, the conquest of British and Dutch areas in the East Indies would enable her to surround Singapore with a ring of hostile air bases. If her direct assault on Singapore from the land failed, she would then be in a position to neutralize this great naval base by the use of shore-based aircraft.

Since the war in the Pacific could not be separated from the great war against Italy and Germany, it was necessary for the Allies to coordinate their Pacific strategy to the grand strategy of a war against the Axis. It was apparent at the end of January that the Allies had learned some of the lessons of previous adversity. They were involved in a series of conferences to promote unity of the war effort.

Planning the War Against the Axis. Throughout the summer and fall of 1941 a high degree of cooperation was developed between Britain, China, and the Dutch East Indies. During the last week in December a large number of conferences took place between the officials of the powers fighting the Axis which aimed at coordinating the war effort for 1942-43. General Wavell had a series of conferences in Chungking with General Chiang Kai-shek. British Foreign Minister Anthony Eden had five conferences with Stalin in Moscow; and most important and surprising of all, Prime Minister Churchill and 80 of his military and naval advisers arrived in Washington on December 22 for joint British-American-Canadian conferences on the war. It was announced that no single supreme command was contemplated. Each belligerent was to assume primary responsibility for one zone of operations and coordinate its effort to the whole program. In a tradition-breaking appearance before the Congress of the United States on December 26, Mr. Churchill declared that 1942 would be a year of preparation for a vigorous Allied offensive in 1943.

WRESTLING. Wrestling, with the exception of the college and amateur variety, was almost defunct in 1941. The professional mammoths had ruined their own game with their persistent hippodroming and found small crowds of curious only in the outlying towns to which the news of their histrionics had not seeped through. In the cities they were without spectators.

The college and amateur game thrived, with many colleges and clubs adopting the sport because of its muscle-strengthening qualities. Four New Yorkers surprised by winning titles in the national A.A.U. meet, and for the second year in a row New York's West Side Y.M.C.A. took the team title. The individual winners were Henry Wittenberg, a holdover in the 174 pound class, Gilbert Frei at 191 pounds, Louis Maschi in the heavyweight ranks, and Chris Soukas at 145 pounds. Herbert Farrell and Homer Faucett of Indiana, Joe McDaniels and Harold Byrd of Oklahoma, and Douglas Lee of Baltimore were the other winners. In college competition, the Jennings brothers of Michigan State, Merel and Burl, won two titles with the University of Oklahoma taking four titles because of the excellence of Al Whitehurst, a holdover, David Arndt, Earl Van Bebber and Virgil Smith. Richard Dibattista of the University of Pennsylvania and Leonard Levy of the University of Minnesota accounted for the other two divisions.

WÜRTTEMBERG. See **GERMANY** under *Area and Population.*

WYOMING. A mountain State. Area: 97,914 sq. mi., including 408 sq. mi. of inland water. Population: (1940 census) 250,742. The urban population comprises 37.3 per cent of the total (U.S. average, 56.5 per cent); nonwhite population, 1.6 per cent (U.S. average, 10.2); elderly (65 years and over), 4.7 per cent. Wyoming ranks eighth among the States in area, 47th in population, and 47th in density, with an average of 2.6 persons per square mile. The largest city and capital is Cheyenne with 22,474 inhabitants. There are 23 counties and four cities of more than 10,000 inhabitants (see article on **POPULATION** in 1940 YEAR BOOK). For statistics on births, deaths, accidents, et cetera, see **VITAL STATISTICS.**

Education. According to Esther L. Anderson, Superintendent of Public Instruction, there were 55,527 pupils enrolled in the public schools of Wyoming during the school year 1940-41, 39,617 in elementary schools and 15,910 in secondary schools. Teachers numbered 2,697 and received an annual average salary of \$1,250. Total expenditures for the year were \$6,145,728.36. For higher education, see *Wyoming* in the table of **UNIVERSITIES.**

Transportation. State highway mileage in 1939, including streets under State control, totaled 3,867, of which 3,524 miles were surfaced. Motor vehicles registered in 1940 (including trailers and motorcycles) numbered 88,166; 66,613 were private and commercial automobiles, 145 busses, and 18,899 trucks and tractor trucks. Gross motor-fuel consumption was 70,753,000 gallons. Net motor-fuel tax receipts were \$2,774,000, the rate being four cents per gallon (Dec. 31, 1940). State motor-vehicle receipts (from registrations, licenses, fines, etc.) were \$603,000.

Railways of all classes extended 2,010 miles

(Dec. 31, 1939), .85 per cent of the total mileage in the United States. Class I steam railways (1,854 miles) reported 3,691,764 tons of revenue freight originating in Wyoming in 1940 and 1,455,451 tons terminating in Wyoming. There are 32 airports and landing fields in the State (15 lighted fields). On July 1, 1941, according to the Civil Aeronautics Authority, there were 85 civil aircraft in the State and 358 airline transport, commercial, and private pilots (301 private).

Agriculture. Acreage harvested in principal crops in 1941 totaled 1,759,500, as compared with 1,595,400 acres in 1940. According to the latest census, there are 15,018 farms, valued at \$158,971,294, averaging 1,866.2 acres each. Farm population numbered 72,723 or 29.0 per cent of the total. The leading crop was hay, worth \$9,612,000 and producing 1,342,000 tons.

Manufacturing. According to the latest census (for the year 1939) the total value of manufactured products was \$45,423,103; 310 establishments employed 3,484 wage earners who received \$4,757,094 in wages for the year.

Mineral Production. The total value of minerals produced in 1939, according to the U.S. Bureau of Mines, was \$39,425,468 or .93 per cent of the total for the United States. The chief items were: Petroleum, 21,454,000 barrels valued at \$18,150,000 (25,683,000 barrels in 1940); coal, 5,383,000 short tons, \$10,766,000 (5,748,000 short tons in 1940).

Trade. According to the 1940 census there were 397 wholesale establishments in Wyoming, employing 1,210 persons, reporting net sales for 1939 of \$37,031,000 and annual pay roll of \$1,671,000. There were 4,113 retail stores with 8,938 employees, reporting sales of \$100,233,000 and pay roll of \$9,346,000. Service establishments numbered 1,199, employing 1,329 persons for \$1,073,000 per year, and reporting a business volume amounting to \$4,467,000. The leading business center of the State is Cheyenne which reported wholesale sales of \$9,059,000 and retail sales of \$13,816,000.

Social Security and Relief. In the calendar year 1940 the total cost of assistance to needy persons in Wyoming was \$4,708,000. Under the Social Security program, financed by Federal funds matching State grants, 3,523 elderly persons were receiving (as of June, 1941) an average monthly old-age pension of \$23.99 (U.S. average pension, \$21.08); 1,968 dependent children in 772 families received average monthly payments of \$32.89 per family (U.S. average, \$32.73); and 150 blind persons received \$26.93 per month (U.S. average, \$25.58). General relief cases, which are supported by State and local funds only, numbered 870 and received \$15.88 per case (average payment for 41 States, \$22.68).

The number of persons employed throughout the State in June, 1941, under the various Federal work programs was as follows (with total earnings for the month in parentheses): CCC, 372 (\$25,000); NYA student work program, 811 (\$6,000); NYA out-of-school work program, 901 (\$17,000); WPA, 2,242 (139,000); other Federal emergency projects, 27 (\$4,000); regular Federal construction projects, 1,870 (\$213,000). The Farm Security Administration certified subsistence payments totaling \$6,000 for the month to 263 cases.

Legislature. The Legislature convenes in regular session on the second Tuesday of January in odd years. It is composed of 27 Senators (11 Democrats and 16 Republicans in 1941) and 56 Representatives (28 Democrats and 28 Republicans).

Finances. Total tax collections in Wyoming for the fiscal year ending in September, 1940, were \$8,160,000. Total sales taxes amounted to \$5,044,000, including motor fuel, \$2,756,000, general sales, \$1,961,000. Taxes on specific businesses ran to \$533,000, general and selective property, \$8,160,000, unemployment compensation, \$1,191,000. Cost payments for the operation of general government totaled \$9,359,000 in 1939, the latest year available. (Revenues for the general government for that year were \$14,056,000.) Cost of operation per capita was \$37.74. Total gross debt outstanding in 1941 was \$3,558,000, as compared with \$5,597,000 in 1932.

Officers and Judiciary. The Governor is Nels Smith (Rep.), inaugurated in January, 1939, for a four-year term; Secretary of State, Lester C. Hunt; Attorney General, Ewing T. Kerr; State Treasurer, Mart T. Christensen; State Auditor, William Jack. Chief Justice of the Wyoming Supreme Court is William A. Riner; there are two associate members elected by popular vote for eight-year terms.

X-RAYS. See ELECTRICAL INDUSTRIES; PHOTOGRAPHY under *Radiography*; PHYSICS.

YACHTING. Although yachting competition was not curtailed during 1941 in United States waters, some of the zest for the season was lost with the necessary canceling of the King's Cup Race and Astor Cup Race, while the New York Yacht Club failed to hold its annual cruise. The longest race of the year was the Storm Trysail Club's 422-mile run from New London, Conn., and up Chesapeake Bay to Hampton, Va. It was won by James H. Grove's sloop *Blitzen*, in the larger class; Harvey Conover's sloop *Revonoc* was the first to report back in the smaller class. In the annual distance race of the Stamford Club around Vineyard lightship and back, De Coursey Fales's schooner *Niña* was the victor. The American Club cruise consisted of four runs and a race around Block Island. *Niña* took the first run, Harkness Edwards's yawl *Wakiva* the second, and P. Mackay Sturges's sloop *Sapphire* two of them.

The 11th Annual Stratford Shoal frolic went to John White's sloop *Babe*; the New York Athletic Club's Block Island race to George Granbery's sloop *Anita*, the sixth time in eleven years; and the New Rochelle-Stratford final to Northport, to the *Windward*. George Fleitz's *Wench* won the Star Class world series. Lois MacIntyre of the Riverside Club was crowned new women's national champion as she took both the Syce Cup on Long Island Sound, and the Mrs. Charles Francis Adams Cup.

YOUTH MOVEMENT. Heightening tension in international affairs and increasing emphasis upon measures for the national defense brought many shifts in the programs of organizations of youth and of agencies concerned with young people, both governmental and nongovernmental.

Accelerated employment in defense industries, combined with enlistments in the military and naval services and the induction of young men into the Army under the Selective Service Act, reduced somewhat the number of unemployed youth. Consequently during the year the Civilian Conservation Corps (q.v.) was substantially diminished

from its former size, and a considerable reduction in the program of the National Youth Administration (q.v.) was effected by order of the Bureau of the Budget in November. Late in the year the President let it be known that he favored the consolidation of the CCC and the NYA to form a single national youth agency, and legislation to that effect was drafted for presentation to Congress. Such a step had been previously recommended by the American Youth Commission of the American Council on Education (see SOCIETIES AND ASSOCIATIONS).

Of great significance in promoting the entrance of youth and adults into employment in defense industries were the four programs of defense training operated in selected public schools throughout the country through the agency of the U.S. Office of Education (q.v.). These were respectively the regular defense training program in city vocational schools, a special program in colleges of engineering, a special program for rural youth and others similarly situated, and a program of related training for youth employed on the out-of-school work projects of the NYA. Substantial appropriations for these purposes were made by the Congress, and responsibility for coordinating the whole program of defense training was centered in the Division of Labor Supply and Training of the Office of Production Management.

The Public Health Service (q.v.), the Children's Bureau (q.v.), the Extension Service of the Department of Agriculture, and the Bureau of Employment Security in the Social Security Board (q.v.) carried on their several activities related to the welfare of young persons. There was generally increased attention to the improvement of dietary habits as a prime factor in enhancing the national vigor and strength, especially of children and youth. This was furthered by a National Nutrition Conference held at Washington in April under the auspices of the Federal Security Administration. Important in their bearings on this subject are the food-stamp plan for relief families, and the expanding prevalence of well-balanced free lunches for school children, resulting largely from the distribution of suitable foodstuffs by the Surplus Marketing Administration (see AGRICULTURE, U.S. DEPARTMENT OF).

During 1941 there was much new activity looking toward the social welfare of the young men in the fighting forces and in defense industries, as well as of the children of families recently migrated into congested centers of military or industrial activity. One of these activities was the creation of the Office of Defense Health and Welfare Services (q.v.). The Office of Civilian Defense (q.v.) directed by Fiorello H. LaGuardia, with Mrs. Franklin D. Roosevelt as assistant director in charge of voluntary participation, includes a division of youth participation.

Among the nongovernmental agencies, the principal development of the year was the progress of the league of seven great agencies known as the United Service Organizations, formed for the purpose of promoting wholesome recreation and social activities for the young men of the military and naval services. The American Youth Congress continued through the eighth year of its existence its efforts to lead public opinion among American young people, but its influence, never great, declined somewhat because it lost the patronage of Mrs. Roosevelt through its opposition to the policy of the national administration with respect to foreign relations and defense. After midyear and the Nazi attack on Russia, however, the organization

supported the national policies. Speaking of the American Youth Congress in a notable address on the youth movement in the United States at the annual convention of the American Association of Teachers Colleges, Albert Lindsay Rowland said, "There seems to be evidence that it has so far employed approved democratic methods in its procedures and is loyal to the principles of American democracy." (For the above, see SOCIETIES AND ASSOCIATIONS.)

American Youth Commission. This nongovernmental agency of research and publication, under the chairmanship of Owen D. Young, operating under the auspices of the American Council on Education, carried on through the sixth year of its program. During the year it published some nine staff reports, three of which dealt respectively with *Youth Work Programs*, *Work Camps for College Students*, and *Work Camps for High School Youth*. Three other staff reports dealt with extensive studies of Negro youth in various parts of the country. Typical of these was the volume, *Growing Up in the Black Belt*. Further notable reports treated respectively the use of leisure time by youth, the preparation of youth for marriage and family living, and the scope of youth-serving organizations.

During the year the Commission also completed and adopted its general comprehensive report based on some 27 published staff studies and containing its full recommendations derived from six years of research and deliberation, under the title *Youth and the Future*. Completed after the beginning of the war and released in January, 1942, this volume is the most significant study of American youth problems to be had, and bids fair to influence the quality of American citizenship and the strength of the national culture for many decades. Of special interest are the Commission's statements regarding the war effort and regarding the problems of the inevitable post-war epoch.

Looking forward into the war period, the Commission cooperated with Marshall Field, in his capacity as Chairman of the National Citizens' Committee of the White House Conference on Children in a Democracy, in forming a joint body of ten members known as the Emergency Cooperating Committee for Children and Youth. This agency came into existence at the end of the year on account of the recognition that the health and vital interests of children and youth may suffer unduly during the war years unless protective measures are taken, and that such measures are essential to the national security. Its chairman is Floyd W. Reeves, Director of the American Youth Commission, whose office is at 744 Jackson Place, Washington, D.C. See EDUCATION under *Youth Employment*. Compare JUVENILE DELINQUENCY.

M. M. CHAMBERS.

YUKON. A northwestern territory of Canada. Area, 207,067 sq. mi. (inc. 1,730 sq. mi. of fresh water.) Population (1941 census), 4,687. Chief towns: Dawson (capital), and Whitehorse. The principal industry is mining, the output for 1939 being valued at \$4,961,321, of which gold (87,745 fine oz.) accounted for \$3,171,192, silver (3,830,864 fine oz.) \$1,551,040, and lead (7,544,632 lb.) \$239,089. Tungsten and coal also are mined. Balsam, spruce (white and black), poplar, cottonwood, and birch are the chief trees of the forests. Fur output (1938-39): 77,475 pelts valued at \$267,721. Communications (1940): 58 miles of railway, 324 miles of wagon roads, 978 miles of sled roads and trails, and several landing fields for aircraft. The Yukon River (1,437 miles long) is an

important means of communication from the coast to the interior. Finance (1938): \$213,712 for revenue and \$212,597 for expenditure. A controller and a territorial council (of 3 elected members) administer the territory. The Yukon elects a member to the House of Commons of the Federal Parliament at Ottawa. Controller, George A. Jeckell (appointed June 30, 1922). See CANADA under *History*.

YUGOSLAVIA. A kingdom in the Balkans; occupied by German and Italian military forces in April, 1941, and subsequently partially dismembered. Capital, Belgrade (Beograd). Sovereign, King Peter II, who succeeded to the throne as a minor on Oct. 9, 1934, and assumed full ruling powers Mar. 27, 1941.

Area and Population. The area of Yugoslavia on Jan. 1, 1941, was 95,576 square miles. Estimated population, 15,703,000 on Dec. 31, 1939 (13,934,038 at 1931 census). Four-fifths of the inhabitants were classified as rural. The autonomous Banovina (Province) of Croatia comprised 25,634 square miles and 4,403,199 inhabitants (Croatsians, 3,325,830). The 1931 census populations of the chief cities were: Belgrade, 266,849; Zagreb, capital of Croatia, 185,581; Subotica, 100,058; Ljubljana, capital of Slovenia, 79,056; Sarajevo, 78,173; Skopljje, 64,737; Novi Sad, 63,985.

Religion and Education. According to the 1931 census, there were 6,785,501 members of the Serbian Orthodox Church (48.70 per cent of the total population), 5,217,910 Roman Catholics (37.45 per cent), 1,561,166 Moslems (11.2 per cent), 231,169 Protestants (1.66 per cent), 68,405 Jews (0.49 per cent), and 44,671 Greek Catholics (0.32 per cent). Primary education was compulsory and, in government schools, free. School enrollment in 1938-39 was: Elementary, 1,474,224; secondary, 177,034; university, 16,969.

Production. Four-fifths of the population normally engages in agriculture, and about 80 per cent of the cultivated area is devoted to cereals. Yields of the chief cereal crops in 1940 were (in metric tons): Corn, about 5,000,000; wheat, 1,900,000; barley, 200,000; rye, 200,000. Other important crops were (metric tons): Beet sugar, 108,000 (1939); tobacco, 15,400 (1939); hemp, 53,500 (1939); potatoes, 17,016,000 (1938). Plums and other fruit are widely grown. Livestock in 1939 included 4,224,595 cattle, 10,153,798 sheep, 1,273,359 horses, 19,475 mules, 1,866,141 goats, and 3,503,454 swine. Forests produce about 530 M cu. ft. annually in normal times. Mineral output in 1940 was (metric tons): Lignite, 6,888,000; copper, smelter, 43,200; lead, smelter, 32,400; zinc, smelter, 6,000; bauxite, about 150,000; chromite, 60,000; iron ore, 600,000; pig iron, 60,000; manganese ore, 6,000; antimony, 3,350; aluminum, 2,800. There were 3,054 industrial enterprises in 1938 and their employees numbered about 400,000 in 1940. Leading industries include timber, textiles, milling, tanning, cement, leather goods, chemicals, steel, brewing, and sugar refining.

Foreign Trade. The value of merchandise imports in 1940 was 6,018,000,000 dinars (4,756,800,000 in 1939); exports, 6,680,400,000 (5,521,200,000 in 1939). For distribution and character of 1939 trade, see YEAR BOOK for 1940. Also see TRADE, FOREIGN, in this volume.

Finance. Budget expenditure authorized for the 1940-41 fiscal year (ended March 31) was 14,708,200,000 dinars, as against actual expenditures of 12,327,900,000 dinars in 1939-40. Estimated revenue in 1939-40, 12,786,000,000 dinars. Public debt on Mar. 31, 1939, 24,620,000,000 dinars (in-

ternal, 10,420,000,000). The average exchange rate of the dinar was \$0.0227 in 1939, \$0.0225 in 1940.

Transportation. There were 6,591 miles of railway in 1939 (6,000 miles operated by the state). Highways extended 26,534 miles (see **ROADS AND STREETS**). The Danube and other rivers are important traffic arteries. Yugoslav airlines in 1939 carried 12,687 passengers and 84,011 lb. of mail and other matter.

Government. The Constitution of Sept. 3, 1931, proclaimed Yugoslavia a hereditary, constitutional monarchy. It vested executive power in the King, acting through a Ministry appointed by him and not responsible to Parliament. Legislative power was shared by the King and Parliament. There was a Senate of 84 members, half elected and half appointed by the Crown for terms of six years. The Lower Chamber (Skupshchina) of 371 elective members was dissolved Aug. 26, 1939, and new elections were still pending when the German-Italian invasion occurred in 1941. The kingdom was subdivided administratively into nine banovinas (provinces), each under a governor (ban) appointed by the Crown. By a decree of Aug. 26, 1939, the Banovina of Croatia (Hrvatska) obtained full autonomy in all purely provincial matters (see **YEAR BOOK** for 1939, p. 815), and it was agreed that similar powers were to be extended to other parts of the kingdom. Premier at the beginning of 1941, Dragisha Cvetkovich, heading a Cabinet of 10 Serbs, 6 Croats, 1 Slovene, and 1 Bosnian Moslem. The King being still a minor, his powers were exercised by a regency headed by his uncle, Prince Paul.

HISTORY

The explosive situation that developed in Yugoslavia in 1940 as a result of German pressure for Yugoslav adhesion to the Axis (see **YEAR BOOK** for 1940) moved rapidly to a tragic climax in 1941. The Regency and Government yielded to German threats on March 25, only to be overthrown two days later by military leaders enthusiastically supported by the Serb populace. When the new Provisional Government repudiated collaboration with the Axis in favor of neutrality, German armed forces invaded the kingdom on April 6 and crushed all organized resistance within 12 days (see **WORLD WAR** for account of military campaign). King Peter and his new Government were driven into exile and the Yugoslav people entered upon a new period of foreign subjection.

Negotiations with Reich. Early in 1941 Reichsfuehrer Hitler opened his diplomatic drive in the Balkans, designed to extricate Italy from its desperate military position in Albania and North Africa. A "war of nerves" was directed against Yugoslavia and Bulgaria to force them into alliance with the Axis. Once German military forces obtained entrance into Bulgaria and Yugoslavia, it was anticipated that Greece would make peace with Italy rather than face a German military invasion.

Bulgaria on March 1 signed the Tripartite Pact of Sept. 27, 1940, between Germany, Italy, and Japan, and simultaneously permitted German occupation of the entire country. Yugoslavia was now surrounded by Axis troops on all sides except the south. The Belgrade Government's diplomatic and military position was further weakened by growing economic dependence upon Germany and by soaring prices resulting from an acute shortage of foodstuffs and raw materials. As of Jan. 1, 1941, Yugoslavia owed Germany about 1,000,000,000 dinars on their joint compensation trade account,

and this adverse balance had to be paid for in Yugoslav produce at prices fixed by Germany. The cost of living was some 60 per cent higher than in 1939.

Nazi "power diplomacy," which began to be applied in earnest early in February, utilized economic pressure, an alarmist propaganda campaign both within and without Yugoslavia, and such calculated military threats as flights of German planes over Yugoslav territory to reinforce the political demands submitted to the Belgrade authorities. On February 12 Premier Cvetkovich and Foreign Minister Alexander Cincar-Markovich accepted Hitler's invitation to confer with him at Berchtesgaden. At this conference on February 14, Hitler asked Yugoslavia to sign the Axis pact, permit munitions and if necessary German troops to cross Yugoslav territory to attack Greece, immobilize the Yugoslav army during the forthcoming German occupation of Bulgaria, and grant further economic concessions to the Reich in the form of greater foodstuffs exports and a more favorable exchange rate for the German mark. In return Hitler offered Yugoslavia territorial compensation at the expense of Greece and possibly Albania.

Upon his return to Belgrade, Premier Cvetkovich was instructed by Prince Paul to bring opposition leaders into the Cabinet to insure united support during the ensuing negotiations with Germany. The leaders of the opposition Serb Democratic, Radical Nationalist, Socialist, and Agrarian parties, who strongly opposed concessions to Germany, declined the proffered Cabinet posts. They protested against the Government's failure to inform the nation of the nature of Germany's demands. With German pressure increasing, Premier Cvetkovich stalled for time. Trade talks were renewed with the German economic mission in Belgrade. On February 17 the Germans were permitted to assume full control of the big Bor copper mines in Yugoslavia, having replaced the former French owners through a deal with the Vichy Government.

Upon the German occupation of Bulgaria, Germany warned Belgrade that a prompt decision on Hitler's demands was essential. The next day (March 2) Prince Paul conferred secretly in Slovenia with a special German envoy, who presented additional demands. The Government ordered partial mobilization of the army March 4 because of Germany's threatening attitude. On March 6 Prince Paul submitted the German demands to a conference of Cabinet leaders, members of the Regency, and the Army High Command. When five Cabinet Ministers threatened to resign rather than capitulate, Prince Paul again conferred with the German Minister to Belgrade. The German demands were then modified. In their new form, they provided only for a Yugoslav-German non-aggression pact, a declaration of friendship, and economic concessions. The Yugoslav Cabinet reluctantly agreed to this, and Premier Cvetkovich again vainly sought to coax opposition leaders into the Cabinet so that he might go to Germany to sign the non-aggression pact with the backing of all parties.

Meanwhile the British and American Ministers urged Government leaders to resist German pressure and stay neutral (March 7). The Soviet Government offered its diplomatic support of the harassed Belgrade authorities. Berlin then dropped the projected non-aggression pact as insufficient and on March 11 renewed its original demands of February 14. At another Crown Council called by Prince Paul on March 12, three Ministers threatened to resign if the demands were accepted. With a Cabinet collapse impending, Prince Paul sounded out

Vice Premier Vladimir Matchek, leader of the powerful Croat Peasant party, and War Minister Pesich with tentative offers of the Premiership. Both declined to assume responsibility for accepting the German demands. During the ensuing week, Axis pressure on the Government was intensified, while British, Turkish, and Greek diplomatic representatives fought to keep Yugoslavia out of the Axis. At the same time opposition developed rapidly to concessions to Germany in virtually all Serbian segments of the nation. The Croat leaders and some Slovenian spokesmen were said to favor acceptance of the Nazi demands.

As a precaution against a German attack, the Government on March 18 transferred ex-Premier Milan Stoyadinovich from his sanatorium-prison in Bosnia to Greece, where he was turned over to the British for safekeeping. Arrested in April, 1940, for plotting the establishment of a pro-Nazi regime, he was the logical leader for any puppet government the Axis powers might set up in Yugoslavia. The German Minister then presented Hitler's "final demands," insisting that an answer must be made within eight days. Three Ministers resigned at an emergency Cabinet meeting on March 20 and it was not until 27 leading personalities had rejected the proffered posts that two minor politicians were induced to fill them on March 24. Immediately afterward the Cabinet agreed to partial acceptance of the German terms. That same night the Premier and Foreign Minister entrained for Vienna.

Yugoslavia Joins the Axis. At a ceremony in Vienna attended by Reichsfuehrer Hitler, the two Yugoslav representatives on March 25 signed a protocol of adherence to the German-Italian-Japanese alliance identical with those signed previously by Hungary, Rumania, Slovakia, and Bulgaria.

In notes delivered to the Yugoslav Premier at Vienna, the German and Italian Governments pledged that they would "respect the sovereignty and territorial integrity of Yugoslavia at all times." They further stated that "the Axis . . . Governments during this war will not direct a demand to Yugoslavia to permit the march or transportation of troops through the Yugoslav State or territory." As revealed later by the German note of Apr. 6, 1941, the Yugoslav Government also received secret "assurance that within the framework of the new European order Yugoslavia would receive an outlet to the Aegean Sea which . . . would include Yugoslav sovereignty over the town and harbor of Salonika."

The Military Revolt. The Government and Prince Paul capitulated to the Axis demands in the belief that there was small chance of successful military resistance and that any other course would mean the extinction of Yugoslav independence. The Croat Ministers in the Cvetkovich Cabinet all favored a compromise accord with the Reich, since Croatia was indefensible strategically. Moreover the small Croat separatist movement was making headway at the expense of Dr. Matchek's Croat Peasant party. Dr. Matchek and his associates foresaw that resistance to the Axis would jeopardize both their leadership in Croatia and the unity of Yugoslavia.

With the exception of a small pro-Nazi minority, the Serbs of all classes were roused to deep anger by the Government's capitulation. The resentment found vent in a wave of protest demonstrations in Belgrade and throughout most of the provinces on March 26. Serb patriotic organizations, leaders of the Orthodox clergy, students and peasants demanded the resignation of the Cvetkovich Government and threatened armed revolt. There was serious rioting in some districts. Numerous arrests

by the police failed to check the demonstrations.

At this juncture, officers under the command of Gen. Dushan Simovich, chief of the Air Force, carried out the coup d'état that most of Yugoslavia appeared to be eagerly awaiting. Early in the morning of March 27 troops arrested Prince Paul and the members of the Cabinet, and seized control of the capital without meeting resistance. Young King Peter assumed the royal powers, the Regents and the Cvetkovich Government resigned, and General Simovich was designated to form a new Government. Belgrade awoke to find the coup completed and the new Cabinet being organized.

The populace reacted with delirious enthusiasm to a royal manifesto announcing this news. Massed in the central public square, some 40,000 Serbs wildly cheered King Peter, the members of the new Government, and the Greek, British, and American Ministers. They beat up a number of Germans who appeared on the streets, smashed windows in the German and Italian travel agencies, and shouted for war. Similar scenes were enacted throughout most of the country, where the new regime won the immediate support of both the armed forces and the people. The army immediately restored order and began preparations to resist the expected German attack. During the night of March 27 Prince Paul was permitted to leave Belgrade for Athens.

The Simovich Government. On March 28 King Peter was formally invested with the ruling powers in a ceremony at Belgrade Cathedral. Earlier the same day Premier Simovich had announced his new Cabinet, the principal members being: Vice Premier, Vladimir Matchek; Second Vice Premier, Slovdan Jovanovich; Foreign Affairs, Memcilo Nincich, War and Navy, Gen. Bogoljub Ilich; Interior, Srdjan Budisavljevich; Transport, Bogoljub Yevtich; Finance, Juri Shutej; Agriculture, Dr. Branko Chubrilovich.

In the Cabinet were representatives of all the principal racial groups and political parties of the kingdom. However Dr. Matchek and his Croat followers withheld acceptance of the portfolios offered them until they had received assurances that the Serb-Croat accord of Aug. 24, 1939, would not only be respected but extended. At Dr. Matchek's insistence, the Government also granted the long-standing Croat demand for dissolution of the existing Senate and the holding of free, popular elections for a new parliament. Finally, Dr. Matchek was to be named one of three official counselors to the young King.

On the basis of these far-reaching concessions, Dr. Matchek on April 3 accepted the Vice Premiership under General Simovich. He called upon the Croats to support the Government and obey the general mobilization order. This action frustrated one of the principal aims of Axis propaganda—to split the Croats from the Serbs and thus force the Simovich Government to accept the Tripartite Pact and the Cvetkovich policy of collaboration with the Axis. The full Cabinet met in Belgrade on April 4 and approved the general policy followed by the Government in its negotiations with the Axis powers since March 27.

The Break with Germany. While Yugoslavs and Germans feverishly prepared for war, the Italian Government on April 1 made a last-minute effort to avert a collision, which would threaten the Italian armies in Albania with disaster. The Simovich Government, however, refused to budge from its position, outlined in a note to Berlin on April 1. The note declared that Yugoslavia was ready to make any concessions short of sacrifice of its inde-

pendence and territorial integrity to preserve its neutrality. It was ready to cooperate with the Reich economically and to permit German shipments of foodstuffs and raw materials (but no war materials) across Yugoslav territory. Belgrade would respect all existing "public and open" agreements with neighboring countries. It would never declare war on Germany unless attacked, but would resist all unprovoked aggression.

The German reaction to this stand was indicated by the departure of the last of the German Legation staff on April 3. The same night Italy ordered its Legation staff to leave Belgrade immediately. Early the following day the Yugoslav Government designated Belgrade, Zagreb, and Ljubljana as open cities, hoping to save them from destruction by German air attacks. But Belgrade authorities still refused to authorize consultations between the Yugoslav, British, and Greek general staffs for the coordination of their military forces, since such action would violate the kingdom's neutrality. They sought and obtained ineffective diplomatic support from the Soviet Union in the form of a non-aggression pact signed April 5. The Germans meanwhile were completing their military preparations, while making a final effort to wean Croatia away from Belgrade. When this maneuver failed, the German air force initiated the invasion of Yugoslavia on April 6 by bombing Belgrade at dawn.

A few hours later the German Foreign Minister made public in Berlin the text of a note to the Yugoslav Government announcing that the German army had been ordered "to reestablish law and order in this part of Europe . . . by all available military means." Following the precedent established in connection with the German invasions of Norway, Belgium, and the Netherlands, the note stated that "secret documents of the French general staff" which had been "found at La Charité in France after the outbreak of the war" disclosed that Yugoslavia had pursued a policy directed against Germany since the summer of 1939. These alleged documents were said to prove "irrefutably" that the Yugoslav Government discussed with the French as early as Aug. 19, 1939, the sending of an Allied expeditionary force to Salonika; that in the first months of the war Belgrade had given "the most extensive assistance possible to transports for England and France"; that in April, 1940, Yugoslavia sent a liaison officer to General Weygand's headquarters in Syria; and that under the guidance of "a certain clique of conspirators" Yugoslavia had "finally decided to make common cause with Germany's enemies, to place her army at Britain's disposal, and to allow her country to be turned into a base for attack on Germany."

The Military Collapse. Although the Serbs fought with customary bravery, the overwhelmingly superior German air force and armored divisions shattered the ill-equipped Yugoslav armies within 12 days. The central section of Belgrade was pulverized by continuous air attacks on the first day of the invasion, with civilian deaths estimated at upward of 10,000. Other Serb cities shared the same fate while Croat cities were left untouched. Activities of Bulgarian fifth column elements in Serbian Macedonia and the treason or desertion of some Croat troops were also considered factors in the unexpectedly easy German triumph.

Serb resistance did not end with the surrender of the Yugoslav armies, however. Chetnik (komitaji) bands formed in the mountains and continued guerrilla warfare. Secret organizations of terrorists and saboteurs fought an underground warfare with the Germans and their native collaborators in the cities

and villages. These guerrilla fighters were believed responsible for the explosion of an ammunition dump in Smederovo Fort south of Belgrade on the night of June 5. Some 1,500 persons were reported killed, including 800 German soldiers, and more than 2,000 injured. Small units of the Yugoslav fleet, air force, and army managed to escape to Greece and continued to fight along with the British there and in the Middle East.

The Government-in-Exile. Soon after the invasion, King Peter and the Government withdrew from Belgrade to Sarajevo in southern Yugoslavia. From there they fled to Athens, after the King had issued a proclamation asserting that he would continue the struggle on foreign soil and "until my very last breath hold high the banner of Yugoslavia." From Athens Peter and most of his Cabinet officials went by plane about April 20 to Jerusalem and later to Cairo, where they established a Government-in-Exile. Prince Paul was reported to have been interned by the British Government in the East African colony of Kenya.

After the Allied loss of Greece and Crete had ended hope of a counter-offensive in the Balkans for the time being, King Peter and his Ministers moved their refugee Government to London, arriving there June 21. The Government joined the various other Allied powers in the agreements concluded in London June 12 and September 24 (see GREAT BRITAIN under *History* for details). Diplomatic relations with Russia, which had been severed by Moscow in May to placate the Reich, were restored in mid-July after the outbreak of the German-Russian war. Reorganization of the Government was announced August 24, the principal change being the appointment of two new Vice Premiers. They were Dr. Juraj Krnjević, who replaced Vladimir Matchek as representative of the Croats, and Miho Krek, representing the Slovenes. Vice Premier Slovđan Jovanovič remained in office as representative of the Serbs. King Peter came of age on September 6, an event celebrated at a ceremony in a London church. Along with the Allied Governments, the United States continued to recognize the Simovič Government as the legal representative of the Yugoslav state. American and Russian Ministers presented their credentials to King Peter October 3.

Dismemberment of Yugoslavia. Meanwhile Yugoslavia was being dismembered and scourged by the conquerors. Puppet states were set up in Croatia and Montenegro, to be ruled by Italian princes as Italian protectorates. Northwestern Slovenia was partitioned between Germany and Italy. Italy also annexed Dalmatia, a number of islands off the Croatian coast, and the Croat districts of Castua, Susak, Cabar, and part of Delnice in the vicinity of Fiume. Dalmatia, the population of which was over 70 per cent Croat, was established as a separate governorship, administered by a governor at Zara under the direct jurisdiction of Premier Mussolini. Italian-controlled Albania was extended to include the Kossovo district of Yugoslavia on the east. These territorial adjustments gave Italy direct or indirect control of the entire Adriatic coast of Yugoslavia and a considerable hinterland.

On the east, Hungarian troops moved in on the heels of the invading Germans, despite the Hungarian-Yugoslav pact of eternal friendship of Dec. 12, 1940, and occupied all or most of the districts of Backa and Banat, ceded by Hungary to Yugoslavia at the close of World War I. Bulgaria, by the same procedure, seized the Serbian districts of Macedonia. Serbia, reduced to approximately its 1912 boundaries, was occupied by German troops

but was ruled as a German protectorate by a puppet Serb government at Belgrade.

The new German-Italian frontier through northwestern Yugoslavia was fixed by an agreement signed in Berlin July 8. According to an Italian communiqué of July 9, it followed the former Yugoslav-Italian border line from the Adriatic to a point north of Fiume and then turned eastward to the Croatian frontier, giving Germany a considerable part of northwestern Slovenia and Italy the Dalmatian coast.

The frontier between Croatia and Serbia was fixed in a decree issued June 7 by the Croat dictator, Ante Pavelich. This gave Croatia the territories belonging to Austria-Hungary between 1908 and 1918 as far east as the border between old Serbia and Bosnia. The frontier between Croatia and Montenegro was delimited by a Croat-Italian accord signed in Zagreb October 27. It followed roughly the 1914 border between Austria-Hungary on the one hand and Montenegro and Serbia on the other.

Within a short time after the Yugoslav military collapse, disputes arose among the occupying powers over the division of border territories. The new Croat state disputed Italian and Hungarian territorial claims. Bulgaria and Italy bickered over the new Albanian-Bulgarian frontier. The districts of Backa and Banat, forming Vojvodina, were described as a "trading ground for Germany, Hungary, and Croatia." By the end of 1941 the boundaries of the various occupying powers still were not fully delimited.

The Croat Kingdom. Immediately after German troops captured Zagreb on April 10, a separate Croat state was proclaimed by Dr. Ante (Anton) Pavelich and Slavko Kvaternik, leaders of a Croat terrorist organization, the Ustachi (Ustasi), which was widely held to be responsible for the assassination of King Alexander of Yugoslavia at Marseille, France, in 1934. Since the King's assassination, Pavelich had directed separatist activities and propaganda in Croatia from his refuge in Italy. He was reported to have been heavily supplied with funds by both Italy and Germany, but his followers in Croatia remained insignificant in number. They carried on an increasingly bitter warfare with Dr. Matchek's Croat Peasant party, which in the last parliamentary elections won the support of 90 per cent of all Croat voters.

Under the protection of German arms, Pavelich assumed the headship of the newly proclaimed Croat state and named Kvaternik as Premier. In a proclamation issued April 11, he urged Croat soldiers in the Yugoslav armies to revolt against their Serb leaders. Apparently some of them did so, for the Serbs charged that Pavelich's activities contributed to their quick defeat. Recognition of the new Croat state was extended by Germany and Italy April 15.

Totalitarianism Introduced. Pavelich immediately established a totalitarian regime based on Nazi principles, with the Ustachi as the sole political organization. All existing parties were dissolved, including the Croat Peasant party. Those Peasant party leaders who had not escaped abroad were imprisoned. An anti-Jewish pogrom was launched. The Serbs in Croatia experienced the same harsh treatment as in districts under direct German occupation. On May 7 a curfew for all Serbs in Zagreb was decreed between 6 p.m. and 8 a.m., with death as the penalty for violation.

Treaties with Italy. Restoration of the Croatian monarchy, extinguished in 1097 A.D. was proclaimed in Zagreb on May 14. On May 18 a Croat delega-

tion arrived in Rome and offered the Crown to a Prince of the House of Savoy. Aimone, Duke of Spoleto, was selected for the post on the same day and installed in a ceremony attended by King Victor Emmanuel and Premier Mussolini. At the same time Italy concluded treaties with the new Croat kingdom confirming the annexation of Dalmatia and the other Croat districts described above. Croatia retained an outlet to the Adriatic through Ragusa and was granted special port facilities in Spalato.

The Croat kingdom agreed not to establish land, sea, or air forces or fortifications unless approved by Italy; to "collaborate with the Italian armed forces in everything that concerns the organization of its army"; and to conduct its foreign affairs in conformity with the spirit of the "treaty of guarantee and collaboration." Italy, in return, guaranteed the independence and territorial integrity of the Croat kingdom during the life of the treaty, fixed at 25 years. Provision was made for Italo-Croat customs and monetary accords, railway and maritime agreements, and pacts on cultural interchange and treatment of minorities. Croatia was thus tied economically as well as politically to Italy. Italian troops were to remain permanently stationed on Croatian soil, although organization of a Croat national army was started immediately.

Croat Opposition. Upon his return to Zagreb, Pavelich won the Ustachi's acceptance of the arrangements concluded in Rome. But the imposition of an Italian ruler and of the territorial and other accords with Italy aroused resentment among large numbers of Croats. Pavelich's course was denounced by the Croat members of the Yugoslav Government-in-Exile and by the Croat organizations in the United States and other foreign countries. Within Croatia, public antipathy to the Pavelich regime was reported to have provoked wholesale sedition trials and other measures of repression. Unrest was furthered by large shipments of food and raw material reserves to Germany and Italy. On May 10 an agreement was announced for sending 50,000 Croats to the Reich to relieve the German labor shortage. Pavelich conferred with Hitler at Berchtesgaden on June 6, when other measures of economic cooperation were discussed. On June 15 Dr. Pavelich signed the Axis alliance in a ceremony held in Venice.

The Pavelich regime on June 22 demanded the immediate closing of the United States consulate at Zagreb. Under an agreement signed between Croat and German officials November 7, all Yugoslav nationals of German origin in the Croat province of Ljubljana were to be transferred to Germany. Berlin announced on December 14 that the Pavelich regime had declared Croatia in a state of war with the United States.

Meanwhile conditions in Croatia had remained so chaotic that the Duke of Spoleto refused to take up his residence in the Croat capital. Conditions became worse after the Serb rebellion (see below) gained headway. Many Croats joined the Serbs in passive and active resistance to Pavelich and his Axis overlords. At the demand of the Italian Government, Pavelich on August 23 authorized the Italian army to occupy the entire Adriatic coastal region of the new Croat state because of the spreading guerrilla warfare. The population of this region was ordered to surrender all firearms within 48 hours and was forbidden to travel without special authorization.

Friction with Italy. The military occupation caused friction between the Pavelich "Government" and Italy. Anti-Italian demonstrations in Zagreb by

Croat adherents of Pavelich were reported. Pavelich himself showed a growing disposition to turn to Hitler for guidance and support rather than to Mussolini. German intervention in Croat affairs led in turn to friction between Rome and Berlin (see ITALY under *History*). Meanwhile the revolt against Italian rule gained headway both in the Italian-annexed Croat regions and in that part of the new Croat state under Italian military occupation. Mussolini on October 7 decreed the death penalty for plotting against the Italian state in the annexed areas. On October 28 the special Italian military tribunals were authorized to impose the death penalty for sabotage and other harsh penalties for hoarding, inciting to revolt, disseminating false reports, etc. Yugoslav sources reported an Italian "reign of terror" throughout Dalmatia during the last months of the year.

Ustachi Excesses. At the same time Pavelich's Ustachi, which had developed its own secret police and military units on the Nazi model, was proving an even greater scourge to Serbs and Croats loyal to the Yugoslav Government-in-Exile. Mass executions of Serbs, reported from various parts of Croatia, indicated an attempt at systematic eradication of the entire Serb population of Croatia. Intelligence reports to Ankara, Turkey, stated that the Ustachi had slaughtered between 300,000 and 340,000 Serbs and pro-Yugoslav Croats between May and mid-October. More than half a million Serbs had fled from Croatia into Serbia proper or had joined the Chetniks operating against the Axis throughout Yugoslavia. Among the prominent Croats reported executed by the Ustachi were several associates of Dr. Matchek.

While a few members of the Roman Catholic clergy in Croatia lent their support to the Pavelich regime, most of them publicly condemned some of its totalitarian measures, especially the introduction of racial legislation. The Archbishop of Zagreb was condemned to death for public criticism of such measures, but his sentence was later commuted to 20 years' imprisonment.

Situation in Montenegro. A situation almost identical with that in Croatia developed in Montenegro. On July 12 an Italian-appointed National Assembly at Cetinje proclaimed the restoration of Montenegro's independence and the establishment of an Italian protectorate. The assembly sent to Rome a delegation which petitioned King Victor Emmanuel to appoint a regent pending the enthronement of a King. Mussolini was reported to have encountered great difficulty in inducing any eligible candidate to accept the throne. A spokesman for the Yugoslav Government-in-Exile said on October 21 that Montenegro was in revolt, that seven members of the puppet National Assembly had been assassinated, and that Italian troops and administrators had been driven out of the interior of the country. From German-controlled news sources in Zagreb came reports that thousands of Montenegrins had been deported and held in Albanian concentration camps for resisting Italian rule.

Martyrdom of the Serbs. The sufferings and hardships inflicted upon anti-Axis Croats and Montenegrins were relatively mild compared to the punishment meted out to the Serbs for defying the German Fuehrer. The Axis powers made every effort to conciliate Croats and Montenegrins who were not openly hostile. But toward the Serbs and the Jews the Germans adopted a policy of cruel repression that rivalled the treatment of conquered Poland. Execution, imprisonment, or forced labor was the lot of every Serb judged guilty of supporting the Simovich Government. The country

was looted of food, farm animals, household goods, and possessions of every kind. Guerrilla attacks upon Germans were punished by large-scale executions of men in neighboring villages and the deportation of others to Germany for forced labor.

Terror failed to reduce the Serbs to the desired state of docile subservience. Peasants and industrial workers resisted German efforts to induce them to work. Promises were then made that those resuming productive labor would be well fed and well paid. When this proved unavailing, a decree was issued early in August introducing compulsory labor for all Serb men and women between the ages of 17 and 45 years. This caused a new exodus of men to join Serb guerrilla forces in the mountains.

The Nedich "Government." The German authorities made a new move to weaken Serb opposition through the establishment in Belgrade on August 29 of a puppet Serb administration headed by Gen. Milan Nedich, former Yugoslav Minister of War. In a radio broadcast on September 1, Nedich appealed to the Serbian people to halt the "rivers of blood" flowing all over Yugoslavia lest they "dig their own grave."

Acting under the orders of the German military commander, Nedich recruited a Serb military force of some 10,000 men to aid the Germans in combating the patriot forces in the hills. He also succeeded in winning the cooperation of a number of other prominent Serbian officers and pro-Axis civilians, who entered his Cabinet. While Nedich and his associates were regarded as traitors by many Serb patriots, some Serbs abroad credited them with seeking to save the nation from possible extermination.

Late in October General Nedich took the initiative in arranging a peace conference with Col. Draja Mikhailovich, the patriot commander. In their discussions at Valjevo, southwest of Belgrade, Mikhailovich was said to have presented the following conditions for the conclusion of peace—immediate cessation by the German and pro-Axis Serb armies of the wholesale executions of civilian Serbs, withdrawal of all German troops except from Belgrade and Nish, and that "Serbia be allowed to exist in peace." General Nedich rejected these terms, after referring them to the German commander in Belgrade. The implacable warfare was then resumed on an intensified scale.

Progress of Serb Revolt. Under the able direction of Colonel Mikhailovich, Serb resistance to the invaders and the Nedich puppet government made steady progress. Mikhailovich assumed command of the patriot forces in the Serbian and Bosnian mountains in April. There he bided his time until the withdrawal of large numbers of German troops for service on the Russian front afforded opportunity for a large-scale revolt.

Beginning in July and August the patriot bands launched an offensive against the occupational forces that soon placed them in serious difficulty. Large areas of the country fell under the complete control of guerrillas. Axis garrisons were isolated and besieged in a number of towns and cities. Railway and other communications were disrupted. Detachments of Germans were ambushed and annihilated without regard for the fearful retribution exacted by the Germans from inhabitants of the district. Neutral observers reported that the resulting chaotic conditions resembled the most lawless periods of the Middle Ages.

As early as July the Germans warned that 100 Serbs would be killed for every German or pro-Axis Croat shot by the Chetniks, and this grim

threat was carried out. The Inter-Allied Information Committee in London, representing the various governments-in-exile, estimated on November 19 that "in addition to the massacres committed by the Germans, Hungarians and bandit gangs of Ustachi, upward of 5,000 people have been executed by the Germans as hostages in the course of the last three months." The number of Serbs massacred by Axis police, troops, and the Gestapo was estimated by the Yugoslav Government-in-Exile on November 15 at 350,000. This report, probably somewhat exaggerated, served only to spur the Chetniks and other patriot forces to greater efforts.

Toward the end of September the Germans were obliged to send three divisions of troops into Serbia to assist the occupational forces and General Nedich in coping with the patriot armies. A series of battles ensued in which German artillery and dive bombers wiped out the town of Uzice and other centers under the control of Mikhailovich's forces. Chetnik terrorist bombings and assassinations in Belgrade led the Germans to threaten an artillery bombardment of the already badly damaged capital. The city of Skolpje was reported to have been reduced from 60,000 to 20,000 inhabitants by executions, imprisonments, and the flight of numerous residents to the mountains.

German armored units sent on punitive expeditions into patriot-controlled districts encountered fierce resistance. The use of artillery, dive bombers, tanks, and parachute troops failed to shatter the Serb forces, estimated in mid-November at some 80,000 men. On November 15 Premier Simovich in a London broadcast asserted that the patriot forces actually controlled three-fourths of Serbia. He charged that after pitched battles between German occupational forces and guerrillas the Germans had executed 8,100 Serbs in the cities of Belgrade, Sabac, Kragujevac, and Kraljevo. During the November fighting, more than 1,500 leading professional men and members of prominent Serb families were seized in Belgrade as hostages by the Germans and many of them were said to have been executed.

The failure of the determined German effort to crush the guerrilla forces became evident in December, after weeks of heavy fighting. A gradual withdrawal of German columns from the central and southwestern provinces of Serbia was reported. The forces under Colonel Mikhailovich were said to be continually increasing. In recognition of this achievement, the Yugoslav Government-in-Exile in mid-December promoted him to the rank of a full general.

The Bulgars and Hungarians were reported to have exhibited similar severity in their treatment of Serbs in the annexed districts. Thousands of Serbs were expelled to the German-occupied areas of the country, while other thousands died in mass executions and in the cruel guerrilla warfare that continued in the face of the most extreme repression. See *BULGARIA* and *HUNGARY* under *History*.

Also see *GERMANY*, *GREAT BRITAIN*, *GREECE*, *ITALY*, and *UNION OF SOVIET SOCIALIST REPUBLICS* under *History*; *LABOR CONDITIONS* under *Employment*; *LEND-LEASE ADMINISTRATION*; *NAVAL PROGRESS*; *UNITED STATES* under *Foreign Affairs*.

ZANZIBAR. A British protectorate in East Africa, comprising the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.). Total area, 1,020 square miles. Population (1931 census), 235,428 (Zanzibar, 137,741; Pemba, 97,687). Capital, Zanzibar, 45,276 inhabitants. Cloves (30,320,924 lb. exported from July, 1940, to June, 1941), copra, sesame oil,

and tobacco are the main products. Trade, including bullion and specie (1939): £835,776 for imports and £1,167,028 for exports. Shipping (1939): 2,537,549 gross tons entered. Roads (1940): 243 miles. Budget (1940): £445,800 for revenue and £452,216 for expenditure. The nominal ruler is the Sultan. A British Resident administers the government. There is an executive council over which the Sultan presides, and a legislative council of 15 members including the British Resident as president. Sultan, Seyyid Sir Khalifa bin Harub (succeeded Dec. 9, 1911); British Resident, Henry G. Pilling (appointed Dec. 23, 1940).

ZINC. After the memorable slump in zinc mining and refining in 1939 caused by the tariff on imported zinc, the metal staged a decided comeback in 1940 under the spur of the United States defense program and orders from Britain. After September, 1940, inventories of consumers' stocks showed a rapid decline, and the urgency of war requirements began to be sharply felt early in 1941. Zinc ores, slab zinc, and all zinc manufactures were put under export control, February, 1941, by the Priorities Division of the OPM; and by April 30 stocks had decreased 42 per cent. Zinc was put under strict allocation by the OPM in July. The price was stabilized at 7.65¢ a lb. early in 1941; a mandatory ceiling price of 8.65¢ a lb. was fixed by the OPA in October.

The total 1941 production of zinc in the United States, as estimated by the U.S. Bureau of Mines, was about 732,950 short tons, some 10 per cent more than the 665,068 tons produced in 1940. During the first six months, average monthly production of slab zinc was 88,482 tons. In 1940 the monthly average was 58,842 tons. During July-November, 1941, production per month rose to 73,816 tons. This rate of increase is outstanding in that it was achieved largely through the rehabilitation and expansion of existing plants. Production of slab zinc in 1942 is expected to reach 989,000 net tons including the output from some four or five new plants and from the two smelters owned by the American Smelting and Refining Company, one at Rosita, Mexico, and the other, the huge new electrolytic smelting plant at Corpus Christi, Tex., scheduled to begin production in August, 1942.

Two million tons of zinc concentrates were consumed in 1941 in the production of domestic metal and zinc pigments; 1,600,000 tons produced in the United States, 400,000 tons imported. In 1942 the production of 1,750,000 tons of concentrates is expected from United States mines, stimulated by the rise in prices and the 6-day week; hence, something like an additional 450,000 tons of foreign imports will be needed. Canada and Mexico will be able to supply a good portion of these. The rest will come from South America and Australia if the United States and Britain can keep control of the seas.

Zinc consumption in 1942 as estimated by the U.S. Bureau of Mines will reach 936,000 tons: 312,000 tons for galvanizing, 240,000 tons for brass mills, 120,000 for die casting, 84,000 for rolling mills, 18,000 tons for oxide plants, 150,000 tons for export, 12,000 tons for miscellaneous uses. The zinc industry puts potential 1942 consumption at 1,019,000 tons or 30,000 tons more than production. For production index, see *BUSINESS REVIEW* under *Minerals*.

ZIONISM. See *PALESTINE*; Jewish organizations listed under *SOCIETIES*.

ZOO, Bronx. See **ZOOLOGY.**

ZOOLOGY. General. During 1941 the war interfered only slightly with the transfer of journals and other publications between the United States and Great Britain, but because of such interference in the case of other countries a summary of zoological progress must necessarily be somewhat incomplete. The laboratory at Plymouth, England, was seriously damaged by bombings and while these damages were in large part repaired the fact that the library had been moved to a safer storage place was a handicap to research. The Marine Biological Laboratory at Woods Hole, Mass., reported a large attendance, only slightly smaller than that of the banner year of 1940. The Marine Laboratory of the Carnegie Institution of Washington, founded at the Dry Tortugas, Florida, by the late Dr. A. G. Mayor, was discontinued. At Bermuda the buildings and grounds of the Bermuda Biological Station were leased to the U.S. Government for a temporary hospital connected with the U.S. base there. Arrangements for a limited amount of research work were made at the government aquarium at Flatts. The U.S. Fish and Wildlife Service established a laboratory at Little Port Walter in southeastern Alaska for the study of the natural reproduction of the pink salmon. It is expected that eventually laboratory facilities will be available for visiting biologists (*Science* 94, p. 295).

The New York City Aquarium at Battery Park was closed, probably to be reopened later at some locality not yet determined. The New York Zoological Society at its Zoological Garden in the Bronx, began (some units are already finished), a program for, instead of exhibiting animals in cages or small plots, displaying them in larger areas which so far as possible duplicate their natural environments. Invisible barriers instead of fences keep the animals in place and so far as mutual hostilities do not prevent, the various characteristic inhabitants of each area are included.

The American Society of Zoologists met at Dallas, Texas, from December 29 to 31 under the presidency of R. E. Coker in connection with Section F (Zoology) of the A.A.A.S.

That mutual sterility is a valid distinction between different species was disputed by Gates (*Science* 93, p. 337). "Sterility is more or less an accidental condition which may arise early or late in the differentiation of particular species." "Interspecific sterility is not a consequence of a long period of specific differentiation but may be due to a primary change in chromosomes which may not be noticeable but which leads to further changes resulting in sterility. Evolutionary progress due to chromosomal changes may arise from small as well as from large mutations."

Protozoa. An important publication is *Protozoa in Biological Research*, containing chapters contributed by various writers and edited by Calkins and Summers. Jennings (*Science* 94, p. 447), (see 1940 YEAR BOOK), developed further the idea that social organization begins with the protozoa and can be recognized in a primitive form in all unicellular organisms. Not all members of the same protozoan genus are alike in detail, his discussion being confined largely to *Paramecium bursaria*. Here individuals of one clone differ in constant and characteristic features from those of another. In a clone he could distinguish periods of youth, maturity, old age, and death. In this species can be recognized three groups of distinct clones and sixteen different sex types. Cloff, Dewey, and Kidder (*Biol. Bull.* 81, p. 221), found that in three species

of the protozoan genus *Bresslana* the food is taken into a food vacuole and is immediately killed by an inrush of acid, the hydrogen concentration being between pH 3 and pH 4.2. During digestion the food becomes alkaline. The faeces are acid.

Sponges. Svihla (*Science* 94, p. 278), announced the discovery of the fresh water sponge *Heteromyenia baileyi* on the island of Maui in the Hawaiian Islands. Apparently this had been earlier found by Degener in Oahu but no published record was made. This he stated was the first discovery of these animals east of the Fiji Islands.

Annelids. Although the swarming of the Atlantic and Pacific "palolo" at the breeding season is a well known phenomenon, Clark and Hess (Carnegie Institution Publication No. 554, pp. 21 to 70 and 71 to 81), in their study of the Atlantic form, offer the first comprehensive attempt at an explanation. Earlier workers have noted a correspondence between the time of swarming and certain phases of the moon, but no causal connection has been found nor has any other explanation of the cause of the swarming proved satisfactory. The author's conclusion is that the time of swarming is not as definitely limited to certain days in the month as earlier writers have supposed, for a series of minor swarms may precede or follow the main one or the major swarm may not appear at all, only minor ones occurring at intervals during the month. The swarm may take place at any time of the lunar cycle except that of full moon, but if a major cycle does appear it is within five days of a quarter moon. Unless the reef in which the annelid is living is protected, a wind velocity of over eight miles an hour is sufficient to inhibit a swarming, due to wave action and water disturbances caused by such velocity. It was concluded that three factors, the lunar cycle, maturity of the sex products, and wave action, determine the time of swarming. The third quarter moon has a stronger influence than has the first, and the sensitivity of the animal to swarming stimuli progressively increases with the ripening of the sex products and continues even after this point has been reached.

Mollusca. In earlier papers Coe (see 1940 YEAR BOOK, under SEX DETERMINATION) described the rhythmical changes of sex in the shipworm *Teredo navalis*. Later (*Biol. Bull.* 81, p. 168), he showed that similar conditions occur in other shipworms and gave in detail some steps in this process. He states further that in all dioecious pelecypods that have been sufficiently investigated there is evidence that to a greater or less degree an hermaphroditic condition exists. Here "the sex-differentiating mechanism is so delicately balanced between the two sexual tendencies that relatively slight differences in environmental conditions may be potent in determining which of the two contrasted aspects of sexuality shall be realized." McGinitie (*Biol. Bull.* 80, p. 18) described the feeding process in a number of pelecypod species. Feeding consists first, in the formation of a sheet of mucous over the gill surfaces which strains out food particles from the current of water passing through the gill. This mucous layer is then passed forward by ciliary action to the mouth as a mucous string. Loosanoff and Engel (*Science* 93, p. 238), reported that large numbers of young oysters are killed by the mollusks *Anomia* and *Crepidula*. The spat of these genera settle down at about the same time as do those of the oyster and because of their more rapid growth soon cover over the young oysters and kill them by depriving them of food and oxygen.

Crustacea. Hess (*Biol. Bull.* 81, p. 215) found

that in the crayfish *Crangon*, it is temperature rather than light which influences diurnal moulting. At the Dry Tortugas this is when the temperature rises to or above, 29° C. In females carrying embryos an inhibitory substance delays the moulting process even at this temperature.

Insects. In a presidential address before the Association of Economic Entomologists, Smith (*Jour. Ec. Ent.* 34, p. 1), gave reasons for his belief that insect races may materially change their characteristics so that treatments that at one time have been efficient in insect control may because of these changes become useless. This necessitates constant vigilance on the part of the entomologists. Since insects respond to color stimuli, this should be considered in devising traps. Whittenden and Barclay (*Jour. Ec. Ent.* 34, p. 219), found that for the Japanese beetle the most efficient traps were those colored yellow. Also, these traps do their best work if suspended at a height of 30 inches above the ground. Krog and Zenthen (*Jour. Exp. Zool.* 88, p. 1), showed that in insects flight is possible only at a minimum temperature which in general is above 30° C. In preparation for flight this temperature may be reached through wing vibrations.

The third and last volume of an important publication on the mosquitos of the Ethiopian region, by F. H. Edwards, appeared in 1941. Of especial value is the portion given to descriptions of the characters used in systematics. *Nature* (148, p. 137), reported during the first week in July an invasion in England of the clouded yellow butterflies, *Colias croceus*. Similar invasions have been recorded as far back as 1859.

A controverted question is as to the location of receptor organs in insects. Frings (*Jour. Exp. Zool.* 88, p. 65) thought that in the blowfly antennal organs function as direction-distance receptors, labellar as non-directional which in combination with the chemoreceptors of the labella serve for reception of combined olfactory and gustatory stimuli.

Thone (*Science* 94, p. 6, Suppl.) reported that the Japanese beetle, regarded as one of the most dangerous pests of the eastern United States, shows signs of succumbing to control measures. Areas which earlier showed serious infection now indicate only a mild one so that the insect appears there to be merely a "normal nuisance" rather than a "scourge." This in part is due to the activity of natural enemies but largely to preventive treatment. Of these the most efficient seems to be bacterial infection of the grubs, their bodies later being dried and pulverized and sown in the ground where other grubs become infected. *Science* (94, p. 9), reported the possible value of "chemical lures" instead of poisons in the treatment of insect pests. Since insects are attracted to the plants on which they feed by a chemical stimulus, it might be possible to trap them by baiting a trap with substances giving off the same odor as that of the natural food plant. As examples, the cabbage butterfly and the tent caterpillar were attracted to filter paper impregnated with the chemical compounds preferred by these animals in their natural food. Termites are able to digest wood through the aid of their intestinal protozoa. Dropkin (*Ecology*, 22, p. 200), found that there is evidence that specific protozoa are found in definite species of termites so that it would be possible to determine a species of termite by a study of their protozoa. See ENTOMOLOGY, ECONOMIC.

Fishes. The first of a series of proposed volumes on Australian fishes appeared in 1941 and deals

mainly with the sharks and their allies. The work is important from a systematic standpoint, but also brings in much information on their breeding habits as well as a discussion on the much debated question as to whether they attack human beings. Gudger (*Jour. Mitchell Soc.* 57, p. 57) described the feeding of the whale shark. The animal lies vertically in the water and appears to draw in small fish, such as sardines, by a sucking movement. Beebe (*Science* 94, p. 300) reported the discovery off the coasts of Mexico and Costa Rica, of two specimens of young Florida sailfish. Superficially, although only 42 and 84 mm in length, they resemble the adults in external characters such as the large dorsal fin, but they are covered with scales and have teeth. These latter characters disappear in the adult, with the addition of a large number of changes transforming the fish from a snapping to a slashing method of attacking and feeding.

It has been suggested that fish originated in fresh water, their stream-lined form being an adaptation to swift moving river currents. Gunter (*Am. Nat.* 75, p. 188) disputes this theory so far as it relates to body form, because the stream of a river is not a steady one such as is found in a flume, but there are many currents and eddies whose effect on the fish would be very far from giving it a stream-lined character. Powers (*Ecology* 22, p. 1) gave the results of experiments which indicate that it is physico-chemical carbon dioxide gradient that determines migratory movements of salmon in their approach to the mouths of rivers. In fish of the genus *Gambusia* a portion of the fin of the male is modified to serve as an intromittent organ. Turner (*Jour. of Morph.* 69, p. 161) described in detail the structure of both male and female fins and, since castration prevents the development of the peculiar male structure, he decided that a sex hormone has something to do with its development. In another study (*Biol. Bull.* 80, p. 371) he records that young females treated with ethinyl testosterone will to a certain extent develop this characteristic male organ. An important monograph is "A Systematic Catalogue of the Fishes of the Dry Tortugas," by Longley and Hildebrand (Carnegie Inst. of Wash. Papers from the Tortugas Laboratory, Publication No. 535). Mostly taxonomic in character the paper contains many ecological notes made by the late Professor Longley who was a pioneer in the use of the diving helmet in the under-water study of fishes.

Amphibia. The common spotted newt of the eastern United States has an aquatic and a terrestrial mode of life. In the former it is sexually mature and is of an olive green color with red spots along the sides. It hatches from eggs laid in the water and in the infantile stage is red in color with lateral spots like those in the adult. In this phase it crawls out of the water and spends some time in damp places in the woods. Later it crawls back into the water, assumes the adult color and becomes sexually mature. As an explanation of the immediate stimulus leading to the migration into the water Chadwick (*Jour. Exp. Zool.* 86, p. 175) found that intra-peritoneal injection of the anterior pituitary extract from a number of different animals into the newts of the red phase would stimulate them to this migratory activity. A similar result followed the injection of prolactin from the mammalian pituitary.

Reptiles. Hibernation in desert-living reptiles is accomplished by burrowing into the ground. Cowles (*Ecology* 22, p. 125) studied the hibernation phase of a large number of reptiles on a

ranch in southern California where these were turned out of the soil by the operations of "tracer-scrapers." He found that most of the reptiles collected hibernate at a comparatively shallow depth, the majority lying at less than 13 inches, while the extreme depth was 30 inches. The average soil temperature was 16.1° C., the temperature range being from 0° to 20° C. Hibernation protects the animals from predators as well as from unfavorable climatic conditions.

Birds. In 1940 the Hudson's Bay Company sent an expedition to hunt for the breeding places of Ross's goose, *Chen rossii*. Taverner (*Canadian Field Naturalist* 54, p. 127) reported that these had been found in an unnamed lake on a tributary of Perry River which river opens into Queen Maud Gulf at about 120° W. Chance (*Review in Nature* 147, p. 156) wrote the "Truth About the Cuckoo." He thought that cuckoos mate for life, but this was not definitely proven. The female watches a nest and lays her eggs at the time when the nest is in the best condition and the number laid in a season may be as many as twenty-five. The eggs are laid directly into the nest and never carried by the beak. In general there is a likeness between the cuckoo egg and that of the parasitized bird. The magazine *Bird Lore*, founded thirty-six years ago by F. M. Chapman has changed its name to *Audubon Magazine* and has enlarged its field so as to cover other animals than birds.

The term "migration" has been variously defined, perhaps a reasonably satisfactory one being that it applies to an animal activity in which all or nearly all of the members of a group periodically move to some more or less distant region from which they later return to the original locality. Whether this return must necessarily be included in the conditions of the definition is a disputed point. Many explanations have been offered but none have been generally accepted. Woodruff (*Auk* 53, p. 463) offers the tentative explanation of "periodic response." This migratory habit is only one of many biological rhythms all of which are correlated with periodic environmental events, these being daily, lunar, seasonal, and secular. Migrations are forms of rhythms correlated with

these environmental periodicities. In some cases the migrations were merely conditioned behavior patterns which through mutation or natural selection have become so fixed in heredity that they recur independently of environmental stimuli. Munro (*Canadian Jour. of Research* 19, p. 113) reported on the scaup ducks of Canada, giving many details of their courtship and mating. In the interior these birds are important as food and for sport but near the coast their food importance is less because the flesh is not so tasty. To a certain extent they eat the same food as do fishes, but probably this is not of very much economic importance.

Mammals. Because of indiscriminate killing by whalers the elephant seal, whose oil has a commercial value, had been largely exterminated in its natural habitat, the coast of Lower California. Williams (*Natural History* 48, p. 144) reported that the Mexican government has given military protection to these animals and as a consequence the size of the herds has greatly increased. The ribbon seal is widely distributed in the north Pacific but little is known about its structure and habits. Inukai (*Jour. Fac. Sci., Hakkaido Imp. Univ., Japan*, 7, p. 299) has given a preliminary report on these animals. They can move rapidly on land and, because of their greater ferocity, are much more dangerous to approach than are the fur seals. Aldous (*Jour. Mammalogy* 22, p. 18) found that chipmunks are both animal and vegetable feeders and concluded that they may be beneficial in that they eat insects. McMurry and Sperry (*Jour. Mammalogy* 22, p. 185) found that feral domestic cats are much less of an enemy of birds than is generally supposed. Examination of cat stomachs showed that of food derived from other animals about 2 per cent are birds, 12 to 25 per cent mammals, and 54 to 85 per cent insects. In residential sections a large part of the food of these cats is collected from garbage. Thone (*Science* 93, p. 7, Suppl.) argued for a revision of the attitude of conservationists toward fur bearing animals in general because many of these generally listed as pests have a commercial value.
